Changes to the National Geodetic Survey Datasheets (datasheet95 program)

Version 8.12.5.18 updated on 04/18/2024

In this version there are 3 changes to datasheets,

Change #1:

The default CORS Station Description was updated from:

. . .

```
 DQ7572'DESCRIBED BY NATIONAL GEODETIC SURVEY 2019
 DQ7572'STATION IS A GPS CORS.  LATEST INFORMATION INCLUDING POSITIONS AND
 DQ7572'VELOCITIES ARE AVAILABLE IN THE COORDINATE AND LOG FILES ACCESSIBLE
 DQ7572'BY ANONYMOUS FTP OR THE WORLDWIDE WEB.
 DQ7572'   https://geodesy.noaa.gov/corsdata/coord/coord_14
 DQ7572'   https://geodesy.noaa.gov/corsdata/station_log
 DQ7572'   https://geodesy.noaa.gov/CORS
```

to:

….

```
 DQ7572                          STATION DESCRIPTION
 DQ7572
 DQ7572'DESCRIBED BY NATIONAL GEODETIC SURVEY 2019
 DQ7572'STATION IS PART OF THE NOAA CORS NETWORK.  LATEST INFORMATION INCLUDING
 DQ7572'POSITIONS AND VELOCITIES ARE AVAILABLE IN THE COORDINATE AND LOG FILES
 DQ7572'ACCESSIBLE AT THE WORLDWIDE WEB.
 DQ7572'https://geodesy.noaa.gov/CORS/data.shtml
 DQ7572'https://geodesy.noaa.gov/CORS
```

Prior to this, you would have seen the below text and links:

. . .

```
 DQ7572'DESCRIBED BY NATIONAL GEODETIC SURVEY 2019
 DQ7572'STATION IS A GPS CORS.  LATEST INFORMATION INCLUDING POSITIONS AND
 DQ7572'VELOCITIES ARE AVAILABLE IN THE COORDINATE AND LOG FILES ACCESSIBLE
 DQ7572'BY ANONYMOUS FTP OR THE WORLDWIDE WEB.

 DQ7572'   https://geodesy.noaa.gov/corsdata/station_log
 DQ7572'   https://geodesy.noaa.gov/CORS
```

Change #2:

State Advisor, Brian Shaw, requested that the retrieval time be added to the end of the retrieval date on a datasheet. This date is in military time and also includes the zone (e.g., GMT, EST, EDT, CST, CDT, PST, PDT, etc.). You should see the date and time near the top of a datasheet like the partial datasheet shown below:

```
Starting Datasheet Retrieval...
1    National Geodetic Survey, Retrieval Date = MARCH 22, 2024 12:14:17 EDT
 AC6803 ***********************************************************************
 AC6803  HT_MOD      -  This is a Height Modernization Survey Station.
 AC6803  PACS        -  This is a Primary Airport Control Station.
 AC6803  DESIGNATION -  AZC A
 AC6803  PID         -  AC6803
 AC6803  STATE/COUNTY-  AZ/MOHAVE
 AC6803  COUNTRY     -  US
 AC6803  USGS QUAD   -  LOST SPRING MOUNTAIN EAST (2018)
```

Change #3:

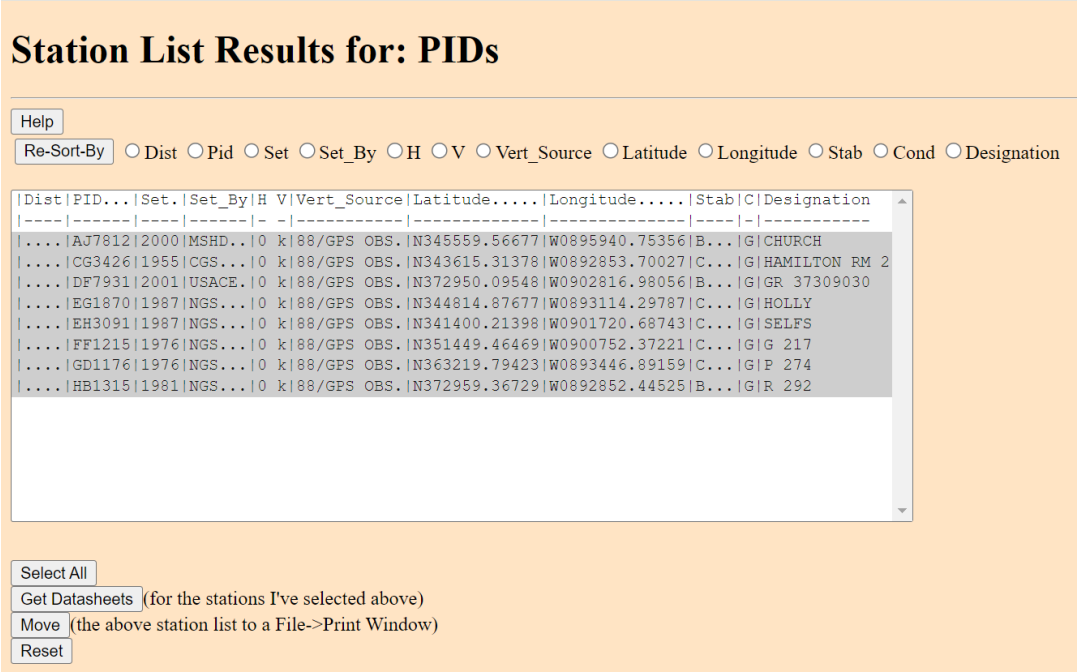
Former NGS employee, Jeff Olsen requested that when one loads a file of PIDs using the https://www.ngs.noaa.gov/cgi-bin/ds_pid.prl webpage, that the marks in the mark listing *not* be sorted and displayed by the default sort order of designation, but rather be displayed in the order in which they appear in the input file.

Example: An input file called pids.in, contains the following PIDs:

```
AJ7812
CG3426
DF7931
EG1870
EH3091
FF1215
GD1176
HB1315
```

Do the following steps:

1. In your favorite browser, enter the URL: *https://www.ngs.noaa.gov/cgi-bin/ds_pid.prl*.
2. Press the *[Choose file]* button and select the pids.in file, and then press the *[Load PIDs from file=]* button. The PIDs from the *pids.in* file will be loaded into the PID Box.
3. Press the *[Submit]* button. You should see the PIDs in the mark listing in the order shown below and the (default) Designation radio button should *not* be turned on.



Station List Results for: PIDs

```

Select All
Get Datasheets (for the stations I've selected above)
Move (the above station list to a File->Print Window)
Reset

4. On the next page, if one presses the *[Select All]* button, followed by the *[Get Datasheets]* button, the datasheets will appear in same order as they did in the mark listing.

Version 8.12.5.17 updated on 02/13/2024

In this version there are 3 changes to datasheets,

Change #1:

NGS has updated the best height algorithm to take care of an exception where no observation date existed on some height records. This exception was found when GPS1862/A was loaded into our database. GPS1862/A spans the following states: AR, IL, KY, MO, MS, and TN.

The following PIDs are in GPS1862/A:

```
AJ7812
CG3426
DF7931
DF7932
DF7933
DF7934
DF7935
DF7936
DF7937
DF7938
DF7939
DF7940
DF7941
DF7942
DF7943
DF7944
DF7945
DF7946
```

DF7947
DF7948
DF7949
DF7950
DF7951
DF7952
DF7953
DF7954
DF7955
DF7956
DF7957
DF7958
DF7959
DF7960
DF7961
DF7962
DF7963
DF7964
DF7965
DF7966
DF7967
DF7968
DF7969
DF7970
DF7971
DF7972
EG1870
EG1874
EH3091
EH3099
FE1881
FE2743
FE2751
FE2754
FF1215
GD1176
GD1874
GE1193
GE1210
HB1301
HB1315

Their ORTHO HEIGHT line will display the following data:

```
AJ7812* NAVD 88 ORTHO HEIGHT -    98.90  (meters)      324.5   (feet) GPS OBS
CG3426* NAVD 88 ORTHO HEIGHT -   115.33  (meters)      378.4   (feet) GPS OBS
DF7931* NAVD 88 ORTHO HEIGHT -   180.27  (meters)      591.4   (feet) GPS OBS
DF7932* NAVD 88 ORTHO HEIGHT -   226.74  (meters)      743.9   (feet) GPS OBS
DF7933* NAVD 88 ORTHO HEIGHT -   121.98  (meters)      400.2   (feet) GPS OBS
DF7934* NAVD 88 ORTHO HEIGHT -   131.62  (meters)      431.8   (feet) GPS OBS
DF7935* NAVD 88 ORTHO HEIGHT -   121.30  (meters)      398.0   (feet) GPS OBS
DF7936* NAVD 88 ORTHO HEIGHT -    97.91  (meters)      321.2   (feet) GPS OBS
DF7937* NAVD 88 ORTHO HEIGHT -   141.55  (meters)      464.4   (feet) GPS OBS
DF7938* NAVD 88 ORTHO HEIGHT -   142.64  (meters)      468.0   (feet) GPS OBS
DF7939* NAVD 88 ORTHO HEIGHT -    89.53  (meters)      293.7   (feet) GPS OBS

```

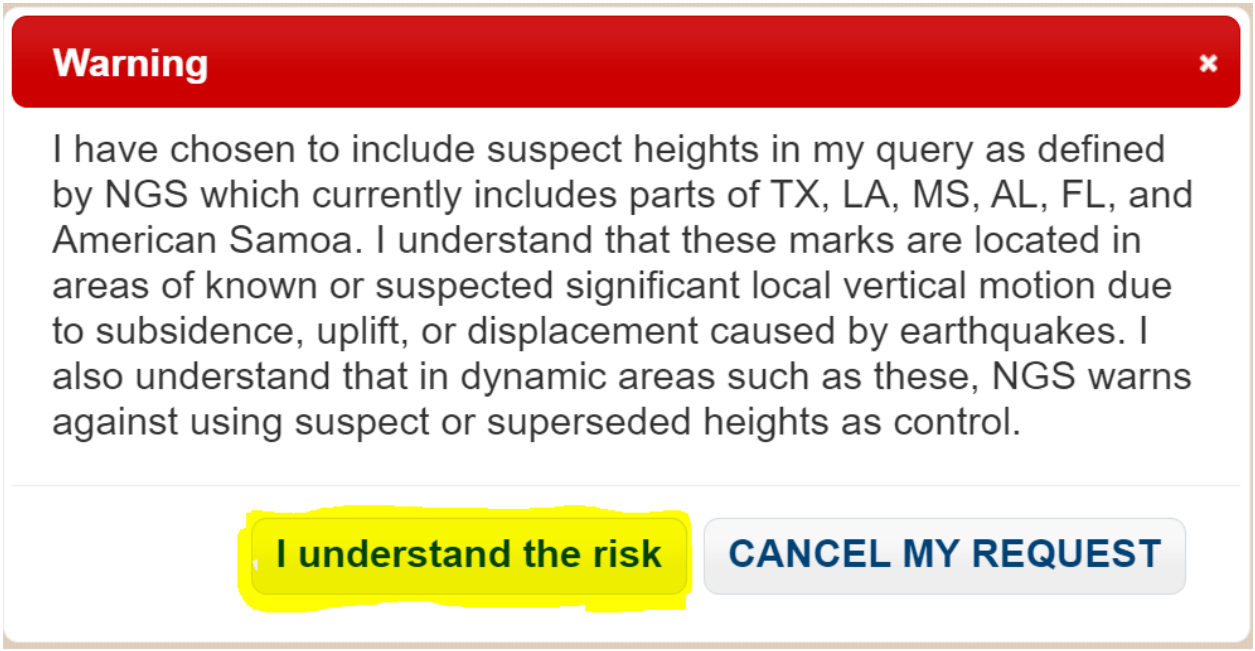
Change #2:

Whenever a control points in the subsidence area has "NOT PUB" on their datasheet's ORTHO HEIGHT line, the VERT ORDER line and any ortho height messages will no longer be displayed on the datasheets.

To see these changes:
1. Go to https://www.ngs.noaa.gov/cgi-bin/ds_pid.prl.
2. Enter the following PIDs into the PID Box:

```
AJ5822
AU0254
AU3359
BJ1449
```

Check the include suspect heights in vertical motion areas checkbox, and then press the *[Submit]* button. When the warnings message pops up as shown below:



press the [I understand the risk] button. On the next page, select the PID radio button, press the [Re-Sort-By] button to sort the marks by PID. Next, press the *[Select All]* button followed by the *[Get Datasheets]* button. You should see the below datasheets without the VERT ORDER or orthometric height messages on them. The ORTHO HEIGHT line is highlighted in green. Other differences on the datasheets are displayed in yellow.

```

AJ5822
AJ5822.The horizontal coordinates were established by GPS observations
AJ5822.and adjusted by the National Geodetic Survey in June 2012.
AJ5822
AJ5822.NAD 83(2011) refers to NAD 83 coordinates where the reference frame has
AJ5822.been affixed to the stable North American tectonic plate. See
AJ5822.NA2011 for more information.
AJ5822
AJ5822.The horizontal coordinates are valid at the epoch date displayed above
AJ5822.which is a decimal equivalence of Year/Month/Day.
AJ5822
AJ5822.** This station is in an area of known vertical motion. If an
AJ5822.** orthometric height was ever established but is not available
AJ5822.** in the current survey control section, the orthometric height
AJ5822.** is considered suspect.  Suspect heights are available in the
AJ5822.** superseded section only if requested.
AJ5822
AJ5822.Significant digits in the geoid height do not necessarily reflect accuracy.
AJ5822.GEOID18 height accuracy estimate available here.
AJ5822
AJ5822.This Tidal Bench Mark is designated as VM 13300
AJ5822.by the CENTER FOR OPERATIONAL OCEANOGRAPHIC PRODUCTS AND SERVICES.
AJ5822
AJ5822.Click photographs - Photos may exist for this station.
AJ5822
AJ5822.The X, Y, and Z were computed from the position and the ellipsoidal ht.
AJ5822
AJ5822.The Laplace correction was computed from DEFLEC18 derived deflections.
AJ5822
AJ5822.The ellipsoidal height was determined by GPS observations
AJ5822.and is referenced to NAD 83.
AJ5822
AJ5822.The dynamic height is computed by dividing the NAVD 88
AJ5822.geopotential number by the normal gravity value computed on the
AJ5822.Geodetic Reference System of 1980 (GRS 80) ellipsoid at 45
AJ5822.degrees latitude (g = 980.6199 gals.).
AJ5822
AJ5822.The modeled gravity was interpolated from observed gravity values.
AJ5822
AJ5822. The following values were computed from the NAD 83(2011) position.

AU0254
AU0254.The horizontal coordinates were established by GPS observations
AU0254.and adjusted by the National Geodetic Survey in June 2012.
AU0254
AU0254.NAD 83(2011) refers to NAD 83 coordinates where the reference frame has
AU0254.been affixed to the stable North American tectonic plate. See
AU0254.NA2011 for more information.
AU0254
AU0254.The horizontal coordinates are valid at the epoch date displayed above
AU0254.which is a decimal equivalence of Year/Month/Day.
AU0254
AU0254.** This station is in an area of known vertical motion. If an
AU0254.** orthometric height was ever established but is not available
AU0254.** in the current survey control section, the orthometric height
AU0254.** is considered suspect.  Suspect heights are available in the
AU0254.** superseded section only if requested.
AU0254
AU0254.Significant digits in the geoid height do not necessarily reflect accuracy.
AU0254.GEOID18 height accuracy estimate available here.
AU0254
AU0254.Click photographs - Photos may exist for this station.
AU0254
AU0254.The X, Y, and Z were computed from the position and the ellipsoidal ht.
AU0254
AU0254.The Laplace correction was computed from DEFLEC18 derived deflections.
AU0254
AU0254.The ellipsoidal height was determined by GPS observations
AU0254.and is referenced to NAD 83.
AU0254
AU0254.The dynamic height is computed by dividing the NAVD 88
AU0254.geopotential number by the normal gravity value computed on the
AU0254.Geodetic Reference System of 1980 (GRS 80) ellipsoid at 45
AU0254.degrees latitude (g = 980.6199 gals.).
AU0254
AU0254.The modeled gravity was interpolated from observed gravity values.
AU0254
AU0254. The following values were computed from the NAD 83(2011) position.
AU0254

AU0254                           STATION DESCRIPTION
AU0254
AU0254'DESCRIBED BY COAST AND GEODETIC SURVEY 1931 (FLG)
AU0254'STATION IS ABOUT 12 MILES SW OF THIBODAUX, 2.2 MILES W OF THE
AU0254'VILLAGE OF DONNER, AND 1.4 MILES N OF GIBSON.
AU0254'
AU0254'SURFACE, UNDERGROUND, AND REFERENCE MARKS ARE STANDARD DISKS
AU0254'SET IN CONCRETE.
AU0254'
AU0254'SURFACE MARK PROJECTS 4 INCHES.
AU0254'
AU0254'REFERENCE MARK NO. 1 PROJECTS 7 INCHES AND IS ON INSIDE OF A
AU0254'BEND IN HIGHWAY 1/8 MILE E OF CHURCH, 25 FEET S OF CENTER LINE
```

AU0254'OF ROAD, 200 FEET E OF A WOODEN SHED AND APPROXIMATELY 1,000 FEET
AU0254'FROM STATION N 85 DEG 52 MIN E.
AU0254'
AU0254'REFERENCE MARK NO. 2, A FLUSH MARK, IS 144 FEET S (IN LINE WITH
AU0254'THE STATION) FROM CENTER LINE OF HIGHWAY, 20.7 FEET SW OF SW
AU0254'CORNER OF CHURCH, 25.2 FEET N OF S FENCE LINE OF CHURCHYARD,
AU0254'AND 109.07 FEET FROM STATION S 11 DEG 55 MIN E.
AU0254'
AU0254'REACHED FROM THIBODAUX BY ROUTE 28 WHICH IS THE MAIN GRAVEL
AU0254'ROAD TO MORGAN CITY, PASSING THROUGH CHACAHOULA AND DONNER.
AU0254'STATION IS ON S SIDE OF ROAD, 59.0 FEET NW OF NW CORNER OF ROSE
AU0254'HILL BAPTIST CHURCH, 35 FEET S OF CENTER LINE OF HIGHWAY, AND IN
AU0254'NORTH SIDE CENTER OF CHURCHYARD, 14.4 FEET S OF A WIRE FENCE.
AU0254
AU0254   STATION RECOVERY (1938)
AU0254
AU0254'RECOVERY NOTE BY LOUISIANA GEODETIC SURVEY 1938
AU0254'CHANGES AS FOLLOWS--ABOUT 12 MILES SW OF THIBODAUX. 23 MILES W
AU0254'OF HOUMA. 2.2 MILES W OF THE VILLAGE OF DONNER, AND 1.4 MILES N
AU0254'OF GIBSON, LOUISIANA. REACHED FROM THIBODAUX BY STATE HIGHWAY 28,
AU0254'FROM HOUMA BY U.S. HIGHWAY 90. TO REACH FROM INTERSECTION OF
AU0254'HIGHWAYS 28 AND 90, WHICH OCCURS 0.5 MILE N OF GIBSON, PROCEED
AU0254'0.2 MILE E ON HIGHWAY 28 TO GRAVEL ROAD WHICH PASSES BENEATH
AU0254'SOUTHERN PACIFIC RAILROAD GRADE, TURN N AND PROCEED FOR 1.2
AU0254'MILES TO ROSE HILL BAPTIST CHURCH. STATION IS ON S SIDE OF
AU0254'ROAD, 59.0 FEET NW OF NW CORNER OF CHURCH. 35 FEET S OF
AU0254'CENTER LINE OF ROAD. 14.4 FEET S OF A WIRE FENCE. (FROM THIS
AU0254'POINT ON THE ORIGINAL DESCRIPTION IS COMPETENT). THESE
AU0254'CHANGES ARE NECESSARY BECAUSE OF THE CONSTRUCTION OF A NEW
AU0254'CONCRETE HIGHWAY FROM THIBODAUX.
AU0254
AU0254   STATION RECOVERY (1948)
AU0254
AU0254'RECOVERY NOTE BY COAST AND GEODETIC SURVEY 1948 (CWC)
AU0254'STATION AND R.M. 2 WERE RECOVERED IN GOOD CONDITION. THE 1938
AU0254'RECOVERY NOTE BY THE LOUISIANA GEODETIC SURVEY IS ADEQUATE
AU0254'FOR FUTURE RECOVERY, BUT THE FOLLOWING MINOR CHANGES AT THE
AU0254'STATION SITE WERE NOTED--
AU0254'
AU0254'THE STATION IS 31.8 FEET S OF THE CENTER LINE OF A SHELL ROAD
AU0254'AND 33.2 FEET SW OF THE GATE LEADING TO THE CHURCH.
AU0254'
AU0254'THE INTERSECTION OF HIGHWAYS 90 AND 28 IS 0.5 MILE W OF GIBSON,
AU0254'NOT N.
AU0254'
AU0254'R.M. 1 WAS SEARCHED FOR BUT NOT RECOVERED.
AU0254
AU0254   STATION RECOVERY (1955)
AU0254
AU0254'RECOVERY NOTE BY COAST AND GEODETIC SURVEY 1955 (HDR)
AU0254'0.5 MI. W ALONG THE TEXAS AND NEW ORLEANS RAILROAD FROM THE
AU0254'STATION AT GIBSON, THENCE 1.4 MI. N ALONG A GRAVELED ROAD,
AU0254'31 FT. S OF THE CENTERLINE OF A ROAD, 59 FT. NW OF THE NW CORNER
AU0254'OF THE ROSE HILL BAPTIST CHURCH, 30 FT. W OF THE CENTERLINE
AU0254'OF A DRIVEWAY LEADING TO THE CHURCH, 2 FT. SW OF A WITNESS POST,
AU0254'A TRIANGULATION-STATION DISK, SET IN THE TOP OF A CONCRETE POST
AU0254'PROJECTING 0.4 FT. ABOVE THE GROUND, AND STAMPED GIBSON 1931.
AU0254'
AU0254'REFERENCE MARK 1 IS 0.1 MI. E OF THE TRIANGULATION STATION, 80
AU0254'FT. W OF A FOOTWALK, 127 FT. NW OF THE N CORNER OF AN OLD SHED,

AJ5822'RECOVERED AS DESCRIBED.
AJ5822
AJ5822                          STATION RECOVERY (2001)
AJ5822
AJ5822'RECOVERY NOTE BY NATIONAL GEODETIC SURVEY 2001
AJ5822'STATION 874 7766 C IS LOCATED ON THE MISSISSIPPI GULF COAST AT
AJ5822'WAVELAND.  TO REACH THE STATION FROM THE INTERSECTION OF US 90,
AJ5822'ROUTE 43, AND NICHOLSON AVE. IN WAVELAND, DRIVE SOUTHEAST ON
AJ5822'NICHOLSON AVE. FOR 1.3 MI TO A RAILROAD CROSSING.  CONTINUE ON
AJ5822'NICHOLSON AVE. FOR 0.4 MI TO THE T INTERSECTION WITH N. BEACH BLVD.
AJ5822'TURN RIGHT AND PROCEED SOUTHWEST ON N. BEACH BLVD. FOR 0.5 MI TO
AJ5822'STATION 7766 D ON THE RIGHT, LANDWARD, SIDE OF N. BEACH BLVD.  THE
AJ5822'STATION IS IN THE FRONT YARD OF A HOUSE AT 231 BEACH BLVD..  IT IS
AJ5822'29.45 M SW OF THE CENTERLINE OF LAFITTE DR., 8.8 M NW OF THE
AJ5822'CENTERLINE OF BEACH BLVD., 14.65 M NE OF THE DRIVEWAY, AND 1.2 M SE
AJ5822'OF A POWER POLE WITH 2 TRANSFORMERS.  THE ACCESS COVER MAY BE
AJ5822'BURIED A FEW CENTIMETERS.
AJ5822'
AJ5822
AJ5822                          STATION RECOVERY (2010)
AJ5822
AJ5822'RECOVERY NOTE BY PICKERING INCORPORATED 2010
AJ5822'MARK WAS FOUND DISTURBED.  THE CAP ON TOP OF THE ROD MARKER WAS BENT.
AJ5822'
AJ5822'ALSO, ANY REFERENCES TO HOUSES OR ADDRESSES IN THE DESCRIPTION ARE NO
AJ5822'
AJ5822'LONGER HELPFUL BECAUSE ALL HOUSES IN THE VICINITY OF THE MARK HAVE
AJ5822'BEEN
AJ5822'DESTROYED SINCE THE 2001 UPDATE.
AJ5822

AU0254
AU0254.The horizontal coordinates were established by GPS observations
AU0254.and adjusted by the National Geodetic Survey in June 2012.
AU0254
```

AU0254.NAD 83(2011) refers to NAD 83 coordinates where the reference frame has
AU0254.been affixed to the stable North American tectonic plate. See
AU0254.NA2011 for more information.
AU0254
AU0254.The horizontal coordinates are valid at the epoch date displayed above
AU0254.which is a decimal equivalence of Year/Month/Day.
AU0254
AU0254.** This station is in an area of known vertical motion. If an
AU0254.** orthometric height was ever established but is not available
AU0254.** in the current survey control section, the orthometric height
AU0254.** is considered suspect. Suspect heights are available in the
AU0254.** superseded section only if requested.
AU0254
AU0254.The orthometric height was determined by differential leveling.
AU0254.The vertical network tie was performed by a horz. field party for horz.
AU0254.obs reductions. Reset procedures were used to establish the elevation.
AU0254
AU0254.Significant digits in the geoid height do not necessarily reflect accuracy.
AU0254.GEOID18 height accuracy estimate available here.
AU0254
AU0254.Click photographs - Photos may exist for this station.
AU0254
AU0254.The X, Y, and Z were computed from the position and the ellipsoidal ht.
AU0254
AU0254.The Laplace correction was computed from DEFLEC18 derived deflections.
AU0254
AU0254.The ellipsoidal height was determined by GPS observations
AU0254.and is referenced to NAD 83.
AU0254
AU0254. The following values were computed from the NAD 83(2011) position.
AU0254
AU0254;   North   East   Units Scale Factor Converg.

AU0254
AU0254                          STATION DESCRIPTION
AU0254
AU0254'DESCRIBED BY COAST AND GEODETIC SURVEY 1931 (FLG)
AU0254'STATION IS ABOUT 12 MILES SW OF THIBODAUX, 2.2 MILES W OF THE
AU0254'VILLAGE OF DONNER, AND 1.4 MILES N OF GIBSON.
AU0254'
AU0254'SURFACE, UNDERGROUND, AND REFERENCE MARKS ARE STANDARD DISKS
AU0254'SET IN CONCRETE.
AU0254'
AU0254'SURFACE MARK PROJECTS 4 INCHES.
AU0254'
AU0254'REFERENCE MARK NO. 1 PROJECTS 7 INCHES AND IS ON INSIDE OF A
AU0254'BEND IN HIGHWAY 1/8 MILE E OF CHURCH, 25 FEET S OF CENTER LINE
AU0254'OF ROAD, 200 FEET E OF A WOODEN SHED AND APPROXIMATELY 1,000 FEET
AU0254'FROM STATION N 85 DEG 52 MIN E.
AU0254'
AU0254'REFERENCE MARK NO. 2, A FLUSH MARK, IS 144 FEET S (IN LINE WITH
AU0254'THE STATION) FROM CENTER LINE OF HIGHWAY, 20.7 FEET SW OF SW
AU0254'CORNER OF CHURCH, 25.2 FEET N OF S FENCE LINE OF CHURCHYARD,
AU0254'AND 109.07 FEET FROM STATION S 11 DEG 55 MIN E.
AU0254'
AU0254'REACHED FROM THIBODAUX BY ROUTE 28 WHICH IS THE MAIN GRAVEL
AU0254'ROAD TO MORGAN CITY, PASSING THROUGH CHACAHOULA AND DONNER.
AU0254'STATION IS ON S SIDE OF ROAD, 59.0 FEET NW OF NW CORNER OF ROSE
AU0254'HILL BAPTIST CHURCH, 35 FEET S OF CENTER LINE OF HIGHWAY, AND IN
AU0254'NORTH SIDE CENTER OF CHURCHYARD, 14.4 FEET S OF A WIRE FENCE.
AU0254
AU0254                          STATION RECOVERY (1938)
AU0254
AU0254'RECOVERY NOTE BY LOUISIANA GEODETIC SURVEY 1938
AU0254'CHANGES AS FOLLOWS--ABOUT 12 MILES SW OF THIBODAUX.  23 MILES W
AU0254'OF HOUMA.  2.2 MILES W OF THE VILLAGE OF DONNER, AND 1.4 MILES N
AU0254'OF GIBSON, LOUISIANA.  REACHED FROM THIBODAUX BY STATE HIGHWAY 28,
AU0254'FROM HOUMA BY U.S. HIGHWAY 90.  TO REACH FROM INTERSECTION OF
AU0254'HIGHWAYS 28 AND 90, WHICH OCCURS 0.5 MILE N OF GIBSON, PROCEED
AU0254'0.2 MILE E ON HIGHWAY 28 TO GRAVEL ROAD WHICH PASSES BENEATH
AU0254'SOUTHERN PACIFIC RAILROAD GRADE, TURN N AND PROCEED FOR 1.2
AU0254'MILES TO ROSE HILL BAPTIST CHURCH.  STATION IS ON S SIDE OF
AU0254'ROAD, 59.0 FEET NW OF NW CORNER OF CHURCH.  35 FEET S OF
AU0254'CENTER LINE OF ROAD.  14.4 FEET S OF A WIRE FENCE.  (FROM THIS
AU0254'POINT ON THE ORIGINAL DESCRIPTION IS COMPETENT).  THESE
AU0254'CHANGES ARE NECESSARY BECAUSE OF THE CONSTRUCTION OF A NEW
AU0254'CONCRETE HIGHWAY FROM THIBODAUX.
AU0254
```

```
AU0254                          STATION RECOVERY (1948)
AU0254
AU0254'RECOVERY NOTE BY COAST AND GEODETIC SURVEY 1948 (CWC)
AU0254'STATION AND R.M. 2 WERE RECOVERED IN GOOD CONDITION.  THE 1938
AU0254'RECOVERY NOTE BY THE LOUISIANA GEODETIC SURVEY IS ADEQUATE
AU0254'FOR FUTURE RECOVERY, BUT THE FOLLOWING MINOR CHANGES AT THE
AU0254'STATION SITE WERE NOTED--
AU0254'
AU0254'THE STATION IS 31.8 FEET S OF THE CENTER LINE OF A SHELL ROAD
AU0254'AND 33.2 FEET SW OF THE GATE LEADING TO THE CHURCH.
AU0254'
AU0254'THE INTERSECTION OF HIGHWAYS 90 AND 28 IS 0.5 MILE W OF GIBSON,
AU0254'NOT N.
AU0254'
AU0254'R.M. 1 WAS SEARCHED FOR BUT NOT RECOVERED.
AU0254
AU0254                          STATION RECOVERY (1955)
AU0254

AU3359
AU3359  VERT ORDER      -  FIRST     CLASS II
AU3359
AU3359.The horizontal coordinates were scaled from a map and have
AU3359.an estimated accuracy of +/- 6 seconds.
AU3359
AU3359.** This station is in an area of known vertical motion. If an
AU3359.** orthometric height was ever established but is not available
AU3359.** in the current survey control section, the orthometric height
AU3359.** is considered suspect.  Suspect heights are available in the
AU3359.** superseded section only if requested.
AU3359
AU3359.The orthometric height was determined by differential leveling and
AU3359.adjusted by the NATIONAL GEODETIC SURVEY
AU3359.in December 1996.
AU3359
AU3359.Significant digits in the geoid height do not necessarily reflect accuracy.
AU3359.GEOID18 height accuracy estimate available here.
AU3359
AU3359.Click photographs - Photos may exist for this station.
AU3359
AU3359.The dynamic height is computed by dividing the NAVD 88
AU3359.geopotential number by the normal gravity value computed on the
AU3359.Geodetic Reference System of 1980 (GRS 80) ellipsoid at 45
AU3359.degrees latitude (g = 980.6199 gals.).
AU3359
AU3359.The modeled gravity was interpolated from observed gravity values.

 AU3359                          STATION DESCRIPTION
 AU3359
 AU3359'DESCRIBED BY LA TRANSP AND DEV 1988
 AU3359'THE STATION IS LOCATED IN NEW ORLEANS NEAR THE NORTHWEST CORNER OF THE
 AU3359'THALIA STREET WHARF ON THE MISSISSIPPI RIVER FRONT UNDER THE EAST
 AU3359'BOUND LANES OF THE GREATER NEW ORLEANS BRIDGE IN THE FOOTING OF THE
 AU3359'FIRST PIER FROM THE WATERS EDGE.  OWNERSHIP--LOUISIANA DEPARTMEANT OF
 AU3359'TRANSPORTATION AND DEVELOPMENT.
 AU3359'THE STATION IS 16.2 M (53.1 FT) NORTHWEST FROM THE NORTHWEST CORNER OF
 AU3359'THE THALIA STREET WHARF, 15.2 M (49.9 FT) NORTHEAST FROM A FIRE
 AU3359'HYDRANT, 4.9 M (16.1 FT) SOUTH FROM THE CENTER OF THE EAST SIDE OF THE
 AU3359'SOUTH PIER AND 0.5 M (1.6 FT) NORTH-NORTHEAST FROM A RETAINING WALL
 AU3359'FOR THE THALIA STREET DOCKS.  THE MARK IS ABOUT 0.30 M (1.0 FT) BELOW
 AU3359'THE DOCKS.
 AU3359
 AU3359                          STATION RECOVERY (1990)
 AU3359
 AU3359'RECOVERY NOTE BY NATIONAL GEODETIC SURVEY 1990
 AU3359'IN NEW ORLEANS, AT THE INTERSECTION OF THALIA STREET AND THE NEW

```

Change #3:

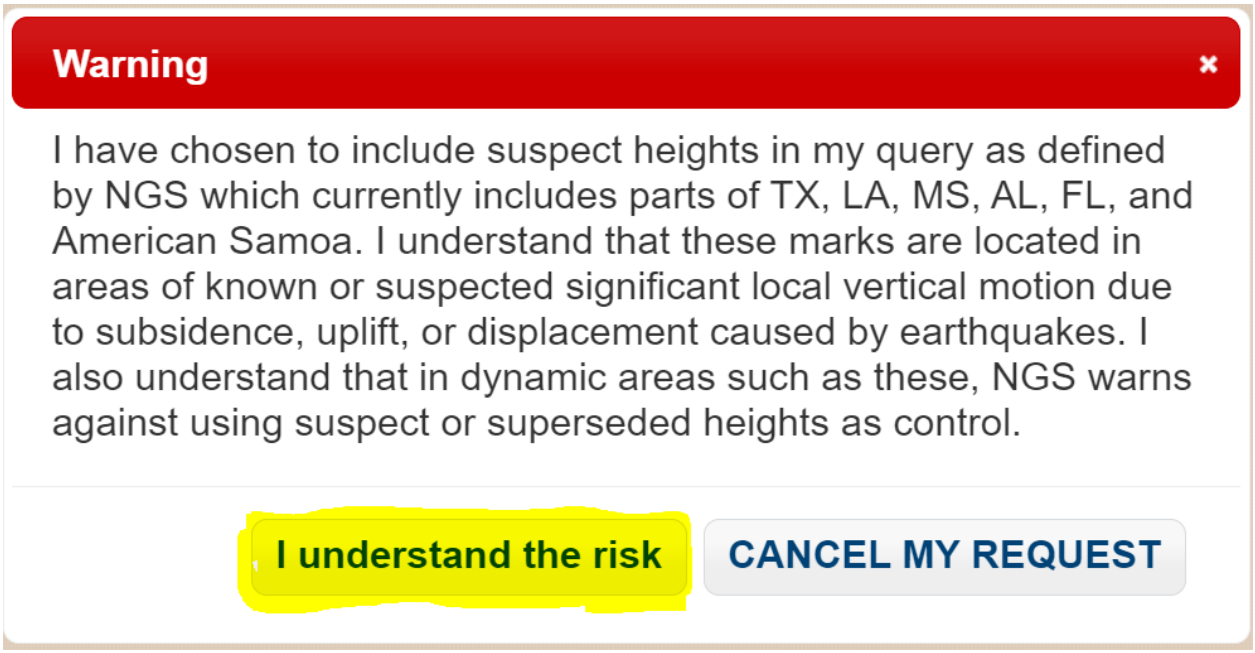
On some datasheets, the geoid models listed in the SUPERSEDED SURVEY CONTROL were being truncated by one character. We have corrected this issue.

To see these changes:

1. Go to https://testaws.nosngs.noaa/cgi-bin/ds_pid.prl.
2. Enter the following PIDs into the PID Box:

```
AG9547
AJ7812
AU2196
DJ2095
FA4563
```

Check the include suspect heights in vertical motion areas checkbox, and then press the *[Submit]* button. When the warnings message pops up as shown below:



press the [I understand the risk] button. On the next page, select the PID radio button, press the [Re-Sort-By] button to sort the marks by PID. Next, press the *[Select All]* button followed by the *[Get Datasheets]* button. You should see the below partial datasheets showing only the SUPERSEDED SURVEY CONTROL section where the geoid models are highlighted in hot pink.

. . .

Version 8.12.5.16 updated on 08/03/2023

There is one change to datasheets with this release.

If a control point is a height modernization (HTMOD) station and also is a primary or secondary airport control station (PACs or SACs) then the paragraph:

```
<PID>.GPS derived orthometric heights for airport stations designated as
<PID>.PACS or SACS are published to 2 decimal places.  This maintains
<PID>.centimeter relative accuracy between the PACS and SACS.  It does
<PID>.not indicate centimeter accuracy relative to other marks which are
<PID>.part of the published vertical control network.
```

will no longer appear on its datasheet. Example PIDs that fall into this category are:

```
AM0539
BL2014
FE2751
EB2716
DD0765
```

Version 8.12.5.15 updated on 05/02/2023

There are three main changes to datasheets with this release.

For the first change, if a control point is a primary or secondary airport control station (PACS or SACS) then the paragraph:

```
<PID>.GPS derived orthometric heights for airport stations designated as
<PID>.PACS or SACS are published to 2 decimal places.  This maintains
<PID>.centimeter relative accuracy between the PACS and SACS.  It does
<PID>.not indicate centimeter accuracy relative to other marks which are
<PID>.part of the NAVD 88 network.
```

now becomes to:

```
<PID>.GPS derived orthometric heights for airport stations designated as
```

```
<PID>.PACS or SACS are published to 2 decimal places.  This maintains
<PID>.centimeter relative accuracy between the PACS and SACS.  It does
<PID>.not indicate centimeter accuracy relative to other marks which are
<PID>.part of the published vertical control network.
```

Example PIDs where you can see this change on datasheets are:

```
AA4464
DQ2174
JV4614
KM0292
TU2250
TV0946
UV1458
```

This change was made to better accomdate control points that are PACS/SACS and are *outside of the NAVD88 network* (such as AA4464 in American Samoa, DQ2174 in the Republic of Marshall Islands, TU2250 in Hawaii, TV0946 in Puerto Rico, and UV1458 in Alaska).

For the second change, control points that are in the TX suspect area should now display the following text:

```
<PID>.** This station is in an area of suspected land subsidence, uplift, or
<PID>.** crustal motion. NGS recommends this and all published orthometric
<PID>.** heights in such areas be validated before use as vertical control.
<PID>.** Click here to see a list and map of nearby stations with valid
<PID>.** orthometric heights.  Note: While datasheets are updated in real-time,
<PID>.** updates to archived datasheets and the SE TX Valid OH map occur
<PID>.** monthly. NGS discourages the use of scaled, VERTCON, or superseded
<PID>.** heights as vertical control as they are deemed unreliable.
<PID>.**
<PID>.** If an established orthometric height is unavailable in the survey control
<PID>.** section, it should be considered suspect. To view suspect heights,
<PID>.** (in the superseded section), select 'Include suspect heights in vertical
<PID>.** motion areas' box from the datasheet retrieval page.
```

Prior to this, the text displayed as:

```
<PID> ** This station is in an area of suspected vertical motion.  Due to the
<PID> ** variability of land subsidence, uplift, and crustal motion, NGS
<PID> ** recommends that all published orthometric heights in such areas be
<PID> ** validated before used as control. In addition, NGS does not
<PID> ** recommend using the following types of orthometric heights as
<PID> ** vertical control: scaled, VERTCON, or superseded. Click here to
<PID> ** see the list of stations with valid orthometric heights in this area.
<PID> **
<PID> ** If an established orthometric height is unavailable in the survey control
<PID> ** section, it should be considered suspect. To view suspect heights,
<PID> ** (in the superseded section), select "Include suspect heights in vertical
<PID> ** motion areas" box from the datasheet retrieval page.
```

An example control point where you can see this change on a datasheet is AW0590. It's partial datasheet with this paragraph is shown below:

```
...
AW0590.** This station is in an area of suspected land subsidence, uplift, or
AW0590.** crustal motion. NGS recommends this and all published orthometric
AW0590.** heights in such areas be validated before use as vertical control.
AW0590.** Click here to see a list and map of nearby stations with valid
```

```
AW0590.** orthometric heights.  Note: While datasheets are updated in real-time,
AW0590.** updates to archived datasheets and the SE TX Valid OH map occur
AW0590.** monthly. NGS discourages the use of scaled, VERTCON, or superseded
AW0590.** heights as vertical control as they are deemed unreliable.
AW0590.**
AW0590.** If an established orthometric height is unavailable in the survey control
AW0590.** section, it should be considered suspect. To view suspect heights,
AW0590.** (in the superseded section), select 'Include suspect heights in vertical
AW0590.** motion areas' box from the datasheet retrieval page.
...
```

The third change involves some very minor text changes to several paragraphs on datasheets. These changes were needed as NGS prepares for a future release of datasheets in JSON format. More will be written on JSON datasheets at a later date. Using the control points of:

```
AA3712
AM0539
AX2553
BG2536
BG5003
BH1164
BJ0637
DC0409
DE8751
DR7033
SZ0062
TU2764
```

these minor changes are shown in the partial datasheets below.

From:

```
AA3712.** The Pago Pago tide station is not formally a part of the current
AA3712.** national tidal datum epoch (NTDE. A Station Datum (SD) has been
AA3712.** determined by the NOS Center for Operational Oceanographic Products
AA3712.** and Services (CO-OPS), and published for the National Water Levels
AA3712.** Observation Network (NWLON) bench mark number 177 0000 W (4.345m meters
AA3712.** or 14.255 ft), located in Pago Pago. Surveys requiring vertical control
AA3712.** must incorporate bench marks around the tide gauge, preferentially
AA3712.** 177 0000 W.
AA3712.**
AA3712.** The heights of stations in this area may have changed
AA3712.** by more than 10 cm due to earthquakes.  NGS strongly warns
AA3712.** against the use of such suspect heights as control.
```

To:

```

Version 8.12.5.14 updated on 01/18/2022

Prior to this version, 4th order adjusted positions in the NGSIDB (NGS database) were transformed via the datasheet95 program into 3rd order adjusted positions on datasheets. This transformation has now been removed by the Observation and Analysis Division (OAD) in NGS. Below are some examples of partial datasheets that now will display 4th order adjusted positions:

Version 8.12.5.14 updated on 10/06/2021

A small subset of leveling marks across the US inadvertently displayed the following message on marks outside of Hawaii:

```
 <PID>.The orthometric height was determined by differential leveling
 <PID>.and adjusted by the National Geodetic Survey in July 2020
```

```
<PID>.holding the tidal station 161 5680 C TIDAL to the 1983/2001
<PID>.tidal station epoch value 1.461 meters.
```

Examples PIDs for marks that were affected included:

```
AU2163
BJ2052
DG7090
DG7091
FY3323
FY3330
```

In this datasheet version, we have fixed this issue.

Version 8.12.5.13 updated on 07/01/2021

There are 4 changes to datasheets in this version:

#1: Whenever a user retrieves datasheets with any of the retrieval options (http://www.ngs.noaa.gov/cgi-bin/ds_desig.prl, http://www.ngs.noaa.gov/cgi-bin/ds_pid.prl, http://www.ngs.noaa.gov/cgi-bin/ds_county.prl, http://www.ngs.noaa.gov/cgi-bin/ds_radius.prl, http://www.ngs.noaa.gov/cgi-bin/ds_mm.prl, http://www.ngs.noaa.gov/cgi-bin/ds_quads.prl, http://www.ngs.noaa.gov/cgi-bin/ds_proj.prl, http://www.ngs.noaa.gov/cgi-bin/ds_dates.prl, and http://www.ngs.noaa.gov/cgi-bin/ds_cors.prl), control points that are *not* publishable will be listed in a report that is appended to the datasheet output after the last datasheet.

#2: Whenever a user retrieved datasheets with any of the retrieval options listed in #1, the resulting mark listing sometimes would display duplicates if CORS were in the listing. This was due to a sort order issue. An example of the original issue is shown below.

Steps:

1. Go to https://www.ngs.noaa.gov/cgi-bin/ds_mm.prl
2. Enter a MIN_LAT of N380412, MAX_LAT of N382432, MIN_LON of W1041236, MAX_LON of W1042715, leave all other field on their default settings, and then press the *[Submit]* button.
3. On the next page, scroll down the page until you see CORS with PIDs: AJ6947, DG6994, AJ6949, DJ6995. You will see that they are duplicated as shown below.

Station List Results for: N380412-N382432-W1041236-W1042715

Get Datasheets (for the stations I've selected above)
Move (the above station list to a File->Print Window)
Reset

Return to Datasheet Home Page

This sort issue has been corrected. Enacting the same steps as above will now display these CORS without duplicates, as shown below.

Station List Results for: N380412-N382432-W1041236-W1042715

Return to Datasheet Home Page

Please note that in the above picture, that PID AJ6947 represents the inactive L1 Phase Center for the ARP with PID AJ6946, and PID DG6994 represents the active L1 Phase Center for the ARP with PID AJ6946. Similarly, PID AJ6949 represents the inactive L1 Phase Center for the ARP with PID AJ6948, and PID DG6995 represents the active L1 Phase Center for the ARP with PID AJ6948. All four of these L1 Phase Centers (active and inactive) will never produce a datasheet as L1 Phase Centers are non-publishable. However, they will appear in the reason code report, which is displayed after the last datasheet whenever one uses any of the datasheet retrieval pages. The reason code report for the above datasheet retrieval by area (MIN/MAX LAT/LON) is shown below with the L1 Phase Centers highlighted in green.

```

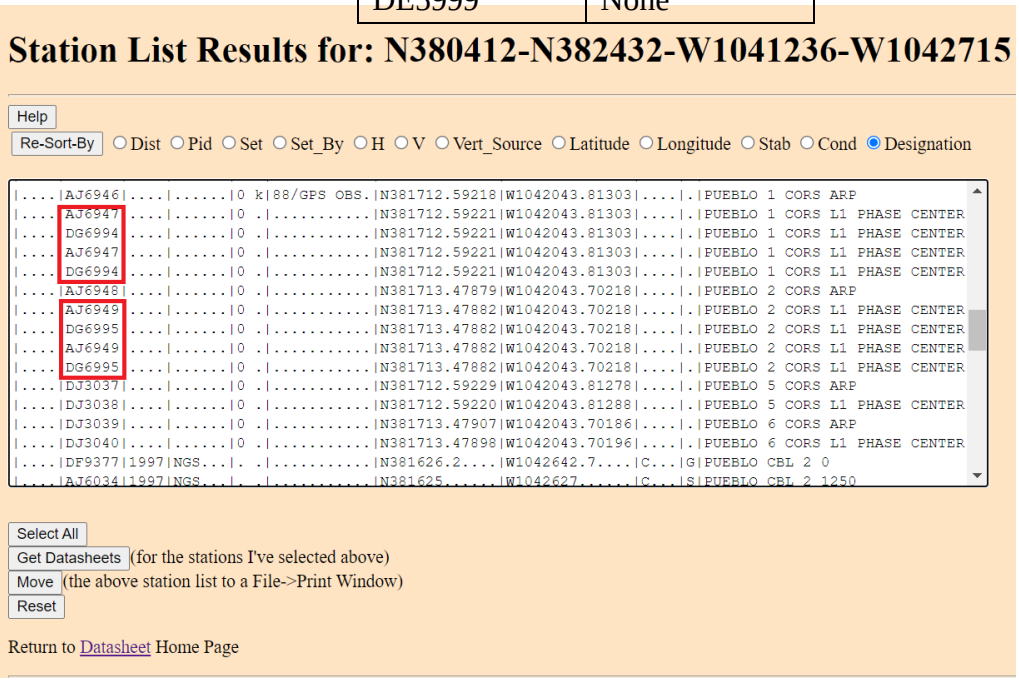
Version 8.12.5.12 updated on 03/03/2021

The Observation and Analysis Division (OAD) in NGS has updated the Southeast Texas *suspect* area to a *subsidence* area. This means that out of approximately 7500 control points in this subsidence area, only 28 are considered to have valid heights. New leveling and/or GNSS data are required in order to densify the network. Below is a list of the 28 specific control points with valid heights.

PID	EPOCH
AF9521	None
AJ8805	None
AW0590	None
AW0591	None
AW0623	None
AW0695	None
AW1082	None
AW1703	None
AW5578	None
AW5707	None
AW7078	None
AX2549	None
AX2552	None
AX2553	None
BK1739	None
BK1753	None
BK1778	None
BK2441	None

BL0169	None
BL0195	None
BL0243	None
BL0356	None
BL0358	None
BL0389	None
BL2014	None
BL2015	None
BL2340	None
DE5999	None



Below is a list of all of the existing subsidence/suspect areas in US states/territories. In the table below, the Southeast Texas suspect area is now considered to be an area of *subsidence* versus a *suspect* area (changes highlighted in green and red).

Dynamic Regions/Subsidence & Suspect Areas

State	Latitude Range	Longitude Range	Area Type
LA	latitude ≤ N303432	longitude ≥ W0912738	Subsidence
LA	latitude ≤ N304850	W0903401 ≤ longitude ≤ W0912738	Subsidence
LA	latitude ≤ N310002	longitude ≤ W0903401	Subsidence
MS	latitude ≤ N320608	W0882650 ≤ longitude ≤ W0910952	Subsidence
AL	latitude ≤ N312344	longitude ≥ W0880000	Subsidence
FL	N301743 ≤ latitude ≤ N303716	longitude ≥ W0870744	Subsidence
TX	N282900 ≤ latitude ≤ N303000	W0934000 ≤ longitude ≤ W0961500	Subsidence (was Suspect)

Any control point residing in the Southeast Texas subsidence area, N282900 ≤ latitude ≤ N303000 and W0934000 ≤ longitude ≤ W0961500, that is not one of the 28 control points with a valid height will display "NOT PUB" on the "ORTHO HEIGHT −" line of their datasheet, as shown below for PID AW1029.

```
AW1029* NAVD 88 ORTHO HEIGHT -          **(meters)           **(feet) NOT PUB
```

In order to designation that a control point is in the Southeast Texas subsidence area, the following message is displayed beneath the "ORTHO HEIGHT −" line:

```
 <PID>  **This station is in an area of suspected vertical motion (see below).
```

along with the paragraphs:

```
 <PID> ** This station is in an area of suspected vertical motion.  Due to the
 <PID> ** variability of land subsidence, uplift, and crustal motion, NGS
 <PID> ** recommends that all published orthometric heights in such areas be
 <PID> ** validated before used as control. In addition, NGS does not
 <PID> ** recommend using the following types of orthometric heights as
 <PID> ** vertical control: scaled, VERTCON, or superseded. Click here to
 <PID> ** see the list of stations with valid orthometric heights in this area.
 <PID> **
 <PID> ** If an established orthometric height is unavailable in the survey control
 <PID> ** section, it should be considered suspect. To view suspect heights,
 <PID> ** (in the superseded section), select "Include suspect heights in vertical
 <PID> ** motion areas" box from the datasheet retrieval page.
```

An example PID showing this message is AW0590. Pertinent information is highlighted in green for the partial datasheet for AW0590 shown below.

AW0590
AW0590
AW0590.The horizontal coordinates were established by GPS observations
AW0590.and adjusted by the National Geodetic Survey in June 2012.
AW0590
AW0590.NAD 83(2011) refers to NAD 83 coordinates where the reference frame has
AW0590.been affixed to the stable North American tectonic plate. See
AW0590.NA2011 for more information.
AW0590
AW0590.The horizontal coordinates are valid at the epoch date displayed above
AW0590.which is a decimal equivalence of Year/Month/Day.
AW0590
AW0590 ** This station is in an area of suspected vertical motion.  Due to the
AW0590 ** variability of land subsidence, uplift, and crustal motion, NGS
AW0590 ** recommends that all published orthometric heights in such areas be
AW0590 ** validated before used as control. In addition, NGS does not
AW0590 ** recommend using the following types of orthometric heights as
AW0590 ** vertical control: scaled, VERTCON, or superseded. Click here to
AW0590 ** see the list of stations with valid orthometric heights in this area.
AW0590 **
AW0590 ** If an established orthometric height is unavailable in the survey control
AW0590 ** section, it should be considered suspect. To view suspect heights,
AW0590 ** (in the superseded section), select "Include suspect heights in vertical
AW0590 ** motion areas" box from the datasheet retrieval page.
AW0590
AW0590.The orthometric height was determined by differential leveling and
AW0590.adjusted by the NATIONAL GEODETIC SURVEY
AW0590.in March 1997.
AW0590
AW0590.Significant digits in the geoid height do not necessarily reflect accuracy.
AW0590.GEOID18 height accuracy estimate available here.
AW0590
AW0590.This Tidal Bench Mark is designated as VM 856
AW0590.by the CENTER FOR OPERATIONAL OCEANOGRAPHIC PRODUCTS AND SERVICES.
AW0590
AW0590.Click photographs - Photos may exist for this station.
AW0590
AW0590.The X, Y, and Z were computed from the position and the ellipsoidal ht.
AW0590
AW0590.The Laplace correction was computed from DEFLEC18 derived deflections.
AW0590
AW0590.The ellipsoidal height was determined by GPS observations
AW0590.and is referenced to NAD 83.
AW0590
AW0590.The dynamic height is computed by dividing the NAVD 88
AW0590.geopotential number by the normal gravity value computed on the
AW0590.Geodetic Reference System of 1980 (GRS 80) ellipsoid at 45
AW0590.degrees latitude (g = 980.6199 gals.).
AW0590
AW0590.The modeled gravity was interpolated from observed gravity values.
AW0590
AW0590.The observed gravity was obtained from relative gravimeter ties
AW0590.to the IGSN71 gravity network.
AW0590
AW0590. The following values were computed from the NAD 83(2011) position.

```

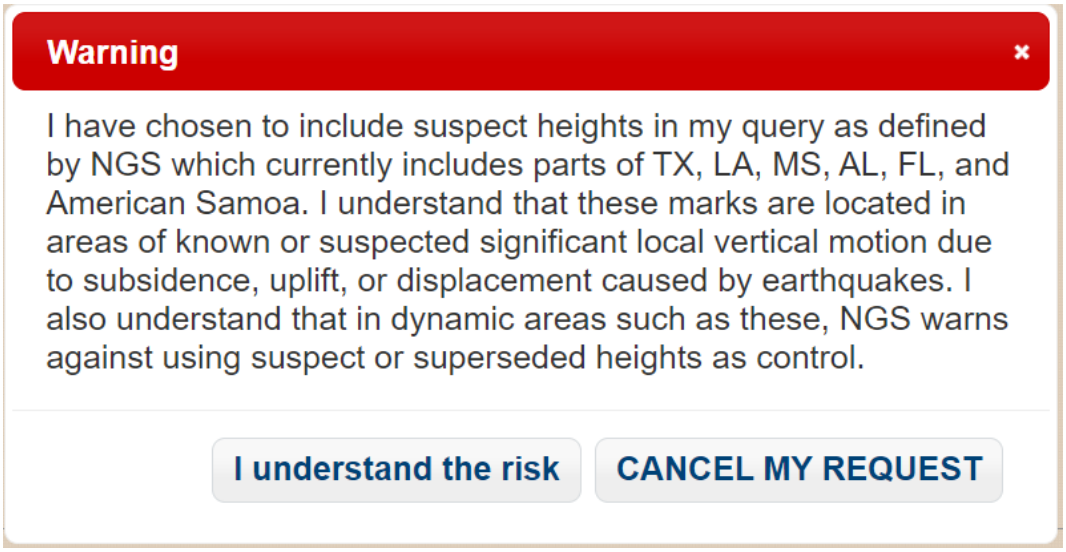
A user can turn on/list suspect heights for control points in the SUPERSEDED SURVEY CONTROL section of their datasheet by checking the

checkbox on the datasheet retrieval pages (such as https://dev.nosngs.noaa/cgi-bin/ds_pid.prl, https://dev.nosngs.noaa/cgi-bin/ds_country.prl, https://dev.nosngs.noaa/cgi-bin/ds_dates.prl, https://dev.nosngs.noaa/cgi-bin/ds_desig.prl, https://dev.nosngs.noaa/cgi-bin/ds_mm.prl, https://dev.nosngs.noaa/cgi-bin/ds_quads.prl, and https://dev.nosngs.noaa/cgi-bin/ds_radius.prl). Before these suspect heights are displayed on their datasheets, however, a user must first press the [I understand the risk] button on the Warning message that displays:



In our example, PID AW1029, the suspect heights will be displayed in the SUPERSEDED SURVEY CONTROL section of the datasheets as shown below with the pertinent text highlighted in yellow.

```

AW1029
AW1029
AW1029.The horizontal coordinates were established by GPS observations
AW1029.and adjusted by the National Geodetic Survey in June 2012.
AW1029
AW1029.NAD 83(2011) refers to NAD 83 coordinates where the reference frame has
AW1029.been affixed to the stable North American tectonic plate. See
AW1029.NA2011 for more information.
AW1029
AW1029.The horizontal coordinates are valid at the epoch date displayed above
AW1029.which is a decimal equivalence of Year/Month/Day.
AW1029
AW1029 ** This station is in an area of suspected vertical motion.  Due to the
AW1029 ** variability of land subsidence, uplift, and crustal motion, NGS
AW1029 ** recommends that all published orthometric heights in such areas be
AW1029 ** validated before used as control. In addition, NGS does not
AW1029 ** recommend using the following types of orthometric heights as
AW1029 ** vertical control: scaled, VERTCON, or superseded. Click here to
AW1029 ** see the list of stations with valid orthometric heights in this area.
AW1029 **
AW1029 ** If an established orthometric height is unavailable in the survey control
AW1029 ** section, it should be considered suspect. To view suspect heights,
AW1029 ** (in the superseded section), select "Include suspect heights in vertical
AW1029 ** motion areas" box from the datasheet retrieval page.
AW1029
AW1029.The orthometric height was determined by differential leveling
AW1029.and adjusted by the NATIONAL GEODETIC SURVEY in August 1995.
AW1029
AW1029.* This is a READJUSTED BENCH MARK height.
AW1029
AW1029.The height was derived from older observations constrained to new
AW1029.heights in a crustal motion area.  The height is approximate in
AW1029.relation to other heights in its vicinity.
AW1029
AW1029.Significant digits in the geoid height do not necessarily reflect accuracy.
AW1029.GEOID18 height accuracy estimate available here.
AW1029
AW1029.Click photographs - Photos may exist for this station.
AW1029
AW1029.The X, Y, and Z were computed from the position and the ellipsoidal ht.
AW1029
AW1029.The Laplace correction was computed from DEFLEC18 derived deflections.
AW1029
AW1029.The ellipsoidal height was determined by GPS observations
AW1029.and is referenced to NAD 83.
AW1029
AW1029.The dynamic height is computed by dividing the NAVD 88
AW1029.geopotential number by the normal gravity value computed on the
AW1029.Geodetic Reference System of 1980 (GRS 80) ellipsoid at 45
AW1029.degrees latitude (g = 980.6199 gals.).
AW1029
AW1029.The modeled gravity was interpolated from observed gravity values.
AW1029
AW1029.The observed gravity was obtained from relative gravimeter ties
AW1029.to the IGSN71 gravity network.
AW1029
AW1029. The following values were computed from the NAD 83(2011) position.
AW1029

Version 8.12.5.11 updated on 12/15/2020

Over the last two years, the National Geodetic Survey's Observation and Analysis Division has worked with the Natural Resources Canada and NGS' System Development Division to make publishable NGS' datasheets for marks found in Canada. The positional and height information provided upon these data sheets will not be officially recognized by the Government of Canada, the provincial governments within Canada, nor are they intended to replace or substitute for them. The intent of sharing these NGS datasheets is to allow access to positions or heights recognized by the United States Government. Passive control that is used by both nations may share the same or similar designations or descriptions but do not share official positions or heights. The "Station Description" may originate from a Canadian "Station Report" and if so contains information licensed under the "Open Government License - Canada".

In this version of datasheets for Canada, there is a new drop-down list box for the “Pick a State” field on the following web pages:
https://www.ngs.noaa.gov/cgi-bin/ds_county.prl
https://www.ngs.noaa.gov/cgi-bin/ds_county_sf.prl
https://www.ngs.noaa.gov/cgi-bin/ds_desig.prl
https://www.ngs.noaa.gov/cgi-bin/ds_desig_sf.prl

The *Pick a State* drop-down list box will now display the following states (Canadian states are highlighted in green):

```
ALABAMA
ALASKA
ARIZONA
ARKANSAS
CALIFORNIA
COLORADO
CONNECTICUT
DELAWARE
DISTRICT OF COLUMBIA
FLORIDA
```

GEORGIA
HAWAII
IDAHO

You will be able to retrieve *NST Map Sheets for Canada* in addition to *USGS Quads* via the following web pages:

https://www.ngs.noaa.gov/cgi-bin/ds_quads.prl
https://www.ngs.noaa.gov/cgi-bin/ds_quads_sf.prl

For example, entering a Quad Name of NIAGARA on the https://www.ngs.noaa.gov/cgi-bin/ds_quads.prl web page, and then pressing the [Submit] button, will result in the following output on the next page (Canadian state of Ontario is highlighted in green):

```
|ST|GDA.....|Min_Lat|Min_Long|Max_Lat|Max_Long|QuadName
|--|--------|-------|--------|-------|--------|--------
|NC|13840519|N350730|W0791500|N351500|W0792230|NIAGARA
|ND|10162744|N475230|W0974500|N480000|W0975230|NIAGARA
|ON|030M03  |N430000|W0790000|N431500|W0793000|NIAGARA
|ON|030M02  |N430000|W0783000|N431500|W0790000|NIAGARA
|OR|8836202 |N450730|W1233730|N451500|W1234500|NIAGARA CREEK
|NY|14106480|N430000|W0790000|N430730|W0790730|NIAGARA FALLS
|ID|8866592 |N423730|W1143730|N424500|W1144500|NIAGARA SPRINGS

Version 8.12.5.10 updated on 09/15/2020

NGS has added a new Datum Origin Point for Maui, HI. It's PID is DK3427. Below is a partial datasheet for DK3427 showing the pertinent new paragraphs are highlighted in green.

```
1        National Geodetic Survey,   Retrieval Date = SEPTEMBER  8, 2020

DK3427
DK3427
DK3427.The horizontal coordinates were established by GPS observations
DK3427.and adjusted by the National Geodetic Survey in June 2012.
DK3427
DK3427.NAD 83(PA11) refers to NAD 83 coordinates where the reference frame has
DK3427.been affixed to the stable Pacific tectonic plate.
DK3427
DK3427.The horizontal coordinates are valid at the epoch date displayed above
DK3427.which is a decimal equivalence of Year/Month/Day.
DK3427
DK3427.The orthometric height was determined by differential leveling
DK3427.and adjusted by the National Geodetic Survey in June 2020
DK3427.holding the tidal station 161 5680 C TIDAL (DK3427) to the 1983/2001
DK3427.tidal station epoch value 1.461 meters.
DK3427
DK3427.Significant digits in the geoid height do not necessarily reflect accuracy.
DK3427.GEOID12B height accuracy estimate available here.
DK3427
DK3427.This bench mark was chosen by the National Geodetic Survey (NGS) to
DK3427.serve as the datum origin point for the island of Maui leveling done
DK3427.between October 2017 and January 2019. The height of this point was
DK3427.adopted by NGS to be exactly 1.461 meters which is identical to the
DK3427.LMSL height of this benchmark for the National Tidal Datum 1983-2001 as
DK3427.determined by the Center for Operational Oceanographics Products and
DK3427.Services (CO-OPS) in December 2017.
DK3427
DK3427.Information on the Tidal Bench Mark designated as VM 1485 and its datum origin
DK3427.point is located at CENTER FOR OPERATIONAL OCEANOGRAPHIC PRODUCTS AND SERVICES.
DK3427

Also in this release, the datasheets in the state-wide monthly archives (ZIP files) available at ftp://ftp.ngs.noaa.gov/pub/DS_ARCHIVE/DataSheets/ will no longer concatenate the nonpub report (with reason codes for why some marks are unpublishable) to the end of the publishable datasheets. Instead, the non pub report will be added as a separate file in the ZIP files. For example, in the ZIP file for the state of FM (Federated States of Micronesia), you would no longer see the text in yellow after the last datasheet (with AA4455).

```

 AA4455                          STATION DESCRIPTION
 AA4455
 AA4455'DESCRIBED BY NATIONAL OCEAN SERVICE 1993 (JGF)
 AA4455'THE STATION IS LOCATED ON YAP AIRPORT ON THE ISLAND OF YAP, YAP STATE,
 AA4455'FEDERATED STATES OF MICRONESIA. TO REACH THE STATION FROM THE TERMINAL
 AA4455'BUILDING OF THE AIRPORT, PROCEED ON THE JET PAD THROUGH THE GATE TO
 AA4455'THE LEFT SIDE OF THE TERMINAL. THE STATION IS LOCATED ON THE HIGH
 AA4455'PORTION OF GROUND TO THE LEFT SIDE OF THE TAXIWAY JUST BEFORE YOU
 AA4455'REACH THE RUNWAY, ABOUT 300 FT (91.4 M) FROM THE TERMINAL BUILDING.
 AA4455'THE STATION IS ON THE HIGHEST PORTION OF LAND THAT COMES TO A POINT AT
 AA4455'THE JUNCTION OF THE RUNWAY AND TAXIWAY. THE STATION IS A STANDARD LAND
 AA4455'MANAGEMENT DISK STAMPED -MN-3-.
 AA4455

Version 8.12.5.9 updated on 07/07/2020

NGS has updated American Samoa (AS) datasheets (post the 2009 earthquake). Projects that include these updates are GPS3350, GPS3350/B1, GPS3350/B2, GPS3350/B3.

Below are partial datasheets of several marks in AS showing the pertinent data highlighted in green.

```

AA3710
AA3710
AA3710.The horizontal coordinates were established by GPS observations
AA3710.and adjusted by the WOOLPERT CONSULTANTS in May 2019.
AA3710
AA3710.NAD 83(PA11) refers to NAD 83 coordinates where the reference frame has
AA3710.been affixed to the stable Pacific tectonic plate.
AA3710
AA3710.The horizontal coordinates are valid at the epoch date displayed above
AA3710.which is a decimal equivalence of Year/Month/Day.
AA3710
AA3710.The current NAD 83 position and ellipsoid height are consistent
AA3710.with AMERICAN SAMOA CORS ASPA coordinates revised in February 2013
AA3710.to account for displacement due to the September 29, 2009 Samoa
AA3710.Island earthquake.
AA3710.The PID for the ASPA CORS ARP is AJ5871.
AA3710.The PID for the ASPA L1 Phase Center is DK7460.
AA3710
AA3710 ** The Pago Pago tide station is not formally a part of the current
AA3710 ** national tidal datum epoch (NTDE. A Station Datum (SD) has been
AA3710 ** determined by the NOS Center for Operational Oceanographic Products
AA3710 ** and Services (CO-OPS), and published for the National Water Levels
AA3710 ** Observation Network (NWLON) bench mark number 177 0000 W (4.345m meters
AA3710 ** or 14.255 ft), located in Pago Pago. Surveys requiring vertical control
AA3710 ** must incorporate bench marks around the tide gauge, preferentially
AA3710 ** 177 0000 W.
AA3710 **
AA3710 ** The heights of stations in this area may have changed
AA3710 ** by more than 10 cm due to earthquakes.  NGS strongly warns
AA3710 ** against the use of such suspect heights as control.
AA3710
AA3710.The orthometric height was determined by GPS observations and a
AA3710.high-resolution geoid model.
AA3710
AA3710.Significant digits in the geoid height do not necessarily reflect accuracy.
AA3710.GEOID12B height accuracy estimate available here.
AA3710
AA3710.Click photographs - Photos may exist for this station.
AA3710
AA3710.The X, Y, and Z were computed from the position and the ellipsoidal ht.
AA3710
AA3710.The Laplace correction was computed from DEFLEC12B derived deflections.
AA3710
AA3710.The ellipsoidal height was determined by GPS observations
AA3710.and is referenced to NAD 83.
AA3710
AA3710. The following values were computed from the NAD 83(PA11) position.
AA3710
AA3710;                    North         East     Units Scale Factor Converg.

Version 8.12.5.8 updated on 05/21/2020

NGS has added a new Datum Origin Point for Oahu, HI. It's PID is TU0291. Below is a partial datasheet for TU0291 showing the pertinent new paragraphs are highlighted in green.

```
1        National Geodetic Survey,   Retrieval Date = MAY 11, 2020
 TU0291 ***********************************************************************
 TU0291  DATUM ORIG  -  This is a Vertical Datum Origin Point.
 TU0291  TIDAL BM    -  This is a Tidal Bench Mark.
 TU0291  DESIGNATION -  161 2340 TIDAL 21
 TU0291  PID         -  TU0291
 TU0291  STATE/COUNTY-  HI/HONOLULU
 TU0291  COUNTRY     -  US
 TU0291  USGS QUAD   -  HONOLULU (2017)
 TU0291
 TU0291                        *CURRENT SURVEY CONTROL
 TU0291
 TU0291* NAD 83(1986) POSITION- 21 18 13.92   (N) 157 51 49.14   (W)   HD_HELD1
 TU0291* LMSL    ORTHO HEIGHT -     2.042 (meters)        6.70  (feet) ADJUSTED
 TU0291
 TU0291  GEOID HEIGHT    -         15.504 (meters)                     GEOID12B
 TU0291  DYNAMIC HEIGHT  -          2.038 (meters)        6.69  (feet) COMP
 TU0291  MODELED GRAVITY -    978,931.8   (mgal)                       NAVD 88
 TU0291
 TU0291  VERT ORDER      -  SECOND    CLASS I
 TU0291
 TU0291.The horizontal coordinates were determined by differentially corrected
 TU0291.hand held GPS observations or other comparable positioning techniques
 TU0291.and have an estimated accuracy of +/- 3 meters.
 TU0291.
 TU0291.The orthometric height was determined by differential leveling and
 TU0291.adjusted by the National Geodetic Survey in May 2019 holding
 TU0291.the tidal station 161 2340 C TIDAL 21 (TU0291) to the 1983/2001 tidal
 TU0291.station epoch value 2.042 meters.
 TU0291
 TU0291.Significant digits in the geoid height do not necessarily reflect accuracy.
 TU0291.GEOID12B height accuracy estimate available here.
 TU0291
 TU0291.This bench mark was chosen by the National Geodetic Survey (NGS) to
 TU0291.serve as the datum origin point for the island of Oahu leveling done
 TU0291.between February 2016 and March 2017. The height of this point was
 TU0291.adopted by NGS to be exactly 2.042 meters which is identical to the
 TU0291.LMSL height of this benchmark for the National Tidal Datum 1983-2001 as
 TU0291.determined by the Center for Operational Oceanographics Products and
 TU0291.Services (CO-OPS) in December 2017.
 TU0291
 TU0291.Information on the Tidal Bench Mark designated as VM 30 and its datum origin
 TU0291.point is located at CENTER FOR OPERATIONAL OCEANOGRAPHIC PRODUCTS AND SERVICES.
 TU0291
 TU0291.Click photographs - Photos may exist for this station.
 TU0291
```

Two NGS projects were adjusted and tied to the Datum Origin Point of TU0291: 00000939/1 and 00000939/2. An example control point that was in project 00000939/1 is DR2140. Below is a partial datasheet for DR2140 showing the pertinent new paragaphs highlighted in green for this project.

```

Version 8.12.5.7 updated on 04/02/2020

There are three change to datasheets in this version.

For the first change, the message:

```
<PID>.WARNING-Repeat measurements at this control monument indicate possible
<PID>.vertical movement.
```

is no longer displayed on datasheets. Three marks that formerly displayed this message on their datasheets are:

```
LG0017
MA0834
```

RB0353

Below are partial datasheets showing what was removed (with the pertinent text highlighted in red):

1.2 The NGS Data Sheet

```
1.2.1.1.1 See file dsdata.pdf for more information about the datasheet.
PROGRAM = datasheet95, VERSION = 8.12.5.6
Starting Datasheet Retrieval...

 . . .
```

For the second change to datasheets, paragraphs in the STATION DESCRIPTION are now separated by a blank line (highlighted in green) for better readability .

```
AK6304                          STATION DESCRIPTION
AK6304
AK6304'DESCRIBED BY COAST AND GEODETIC SURVEY 1965 (DWC)
AK6304'LOCATED ON THE MERRITT ISLAND LAUNCH AREA, ON THE ROOF AND NORTH
AK6304'SIDE OF THE CIF ANTENNA BUILDING NO L 7 1557.  ONE BOLT OF 25
AK6304'BOLTS (1/2 INCH) IN THE CENTER OF A CONCRETE ANTENNA PAD, HAS A
AK6304'PUNCH HOLE THAT MARKS THE STATION.  THE PAD PROJECTS ABOUT 10
AK6304'INCHES ABOVE THE ROOF SURFACE.
AK6304'
AK6304'A TRAVERSE CONNECTION WAS MADE FROM TRIANGULATION STATION PETTEY
AK6304'AND THE DISTANCE IS 3.6306 METERS OR 11.91 FEET.
AK6304'
AK6304'TO REACH FROM THE JUNCTION OF THE NASA CAUSEWAY AND C
AK6304'AVE. S.E., GO NORTHEASTERLY FOR 1.3 MILES TO THE CIF ANTENNA
AK6304'BUILDING AND THE STATION AS DESCRIBED.
```

For the third change to datasheets, the monthly generated archived state-wide datasheets will now display the reason code report, which shows why some marks in a state might be horizontally or vertically unpublishable, immediately after the datasheets that are publishable for that state.

For example, when the monthly generated archived state-wide datasheets are extracted for the state of FM (Federated States of Micronesia), one would see the following reason code report appended to the end of the datasheets for FM:

```
-------------------------------------------------------------------------------
-   This listing contains control for which complete digital                  -
-   data sheets where not provided.  The complete data sheets were            -
-   not provided for the reason listed below.  The reason below is            -
-   associated with a horizontal control Nonpub code shown under              -
-   the heading 'H' and/or a vertical control Nonpub code shown under         -
-   the heading 'v'                                                           -
-                                                                             -
-   The format of the records are as follows:                                 -
-       Pid  = Station Permanent Identifier)                                  -
-       Name = Station Designation                                            -
-       Lat  = Approx. Latitude (Degrees, Minutes, truncated Seconds)         -

-       C         Not a publishable datum within the state                    -
-       D         No descriptive text available                               -
-       F         Bench mark not yet adjusted                                 -
-       N         No geodetic control                                         -
-       L         CORS L1 Phase Center is not publishable                     -
-       O         Outside NGS publication area                                -
-       R         Restricted elevation                                        -
-       S         Mark is in a subsidence area                                -
-       T         Station is a temporary point/bench mark                     -
-       X         Surface mark reported destroyed                             -
-       Y         Surface and underground mark reported destroyed             -
-       Z         Presumed destroyed                                          -
-                                                                             -
-                                                                             -
-   NOTE - Stations found in this listing may still have a valid              -
-          datasheet produced by use of other publishable values.             -
-          For example, an ADJUSTED height may be non-publishable             -
-          but a good GPS height might be found on the datasheet.             -
-                                                                             -
-          If a mark/control point is in a subsidence area, you can request   -
-          to see suspect heights in the SUPERSEDED SURVEY CONTROL section    -
-          of its datasheet by checking the 'Include suspect heights in       -
-          subsidence area' checkbox on the datasheet retrieval pages.        -
-                                                                             -

```

Please note, that each state at ftp://ftp.ngs.noaa.gov/pub/DS_ARCHIVE/DataSheets/ is on a monthly schedule to be re-generated from the NGS database. You can expect that within a month's time that the reason code report for each state will appear in the monthly archived state-wide datasheet ZIP files.

Version 8.12.5.6 updated on 02/19/2020

There is one change to datasheets in this version:

In this change request, a new Texas suspect area for datasheets was added:

$$N282900 \leq \text{latitude} \leq N303000 \text{ and } W0934000 \leq \text{longitude} \leq W0961500$$

Out of approximately 7500 control points in this suspect area, only 25 are considered to have valid heights. New leveling and/or GNSS data are required in order to densify the network. The NGS is not ready to categorize the orthometric heights on these suspect datasheets as "NOT PUB" as it did with control points in the subsidence areas in Alabama, Florida, Louisiana, and Mississippi. However, in order to designate orthometric heights in this Texas area as suspect, the following message is displayed beneath the "ORTHO HEIGHT –" line:

```
<PID>  **This station is in an area of suspected vertical motion (see below).
```

along with the paragraph:

```
 <PID> ** This station is in an area of suspected vertical motion.  Due to the
 <PID> ** variability of land subsidence, uplift, and crustal motion, NGS
 <PID> ** recommends that all published orthometric heights in such areas be
 <PID> ** validated before used as control. In addition, NGS does not
 <PID> ** recommend using the following types of orthometric heights as
 <PID> ** vertical control: scaled, VERTCON, or superseded. Click here to
 <PID> ** see the list of stations with valid orthometric heights in this area.
```

The link (*here*) in this paragraph will go to the *https://www.ngs.noaa.gov/datasheets/southeastTXValidHeights/index.html* page.

Example PIDs with these messages are: AW0590, BL2015, and BK1739.

AW0590's partial datasheet is shown below, with pertinent text highlighted in green:

Version 8.12.5.5 updated on 01/15/2020

There are 2 changes to datasheets in this version:

(1) NGS has updated the USGS quads in our database for CONUS, Alaska, Hawaii, and Puerto Rico. Example PIDs showing this update of the "*USGS QUAD -*" line on their respective datasheet is:

```
MY6006  USGS QUAD   -  BOSTON NORTH (2018)
UV8168  USGS QUAD   -  BAIRD INLET A-1 NE (2017)
AA3584  USGS QUAD   -  HANAPEPE (2017)
TV1295  USGS QUAD   -  CAMUY (2018)
```

Prior to this update, the "USGS QUAD -" line on their respective datasheet was:

```
MY6006  USGS QUAD   -
```

```
UV8168  USGS QUAD    -  BAIRD INLET A-1
AA3584  USGS QUAD    -  HANAPEPE (1996)
TV1295  USGS QUAD    -  CAMUY (1982)
```

(2) NGS has updated the text line for photographs/images on datasheets. An example PID showing this update is BH1212:

```
BH1212.Click photographs - Photos may exist for this station.
```

Prior to this, update the text line for photographs/images on its datasheet was:

```
BH1212.Click here to see if photographs exist for this station.
```

Version 8.12.5.4 updated on 09/10/2019

There are 8 changes to datasheets in this version:

(1) The datasheets were updated to use the new GEOID18/DEFLEC18 grids. These grids affect *only* CONUS, Puerto Rico (PR) and the US Virgin Islands (VQ). Example PIDs in these areas are: AB9517 (VQ), BZ0269 (TX), and TV1516 (PR). Partial datasheets are shown below with special emphasis on the highlighted green text.

```

(1) Datasheets now incorporate IGS14 (realization of ITRF2014 at epoch 2010.0 which replaces IGS08) for CORS. CORS that are part of this realization will show the message:

```
<PID>.Due to the release of the International GNSS Service (IGS) 2014
<PID>.realization of the International Terrestrial Reference Frame of 2014
<PID>.(ITRF2014), NGS reprocessed all NOAA CORS Network and some IGS stations
<PID>.using data collected between 1/1/1996 and 1/30/2017. The resulting ITRF2014
<PID>.epoch 2010.00 coordinates, referred to as Multi-Year CORS Solution 2
<PID>.(MYCS2), were transformed to NAD 83 (2011/PA11/MA11) maintaining the
<PID>.currently published epoch of 2010.00.
<PID>
<PID>.Additional information on MYCS2 is available at
<PID>.https://geodesy.noaa.gov/CORS/coords.shtml
```

Prior to this it was:

```
<PID>***Due to the release of the International GNSS Service (IGS) 2014
<PID>***realization of the International Terrestrial Reference Frame of 2014
<PID>***(ITRF2014), NGS reprocessed all NOAA CORS Network and some IGS stations
<PID>***using datacollected between 1/1/1996 and 1/30/2017. The resulting ITRF2014
<PID>***epoch 2010.00 coordinates, referred to as Multi-Year CORS Solution 2
<PID>***(MYCS2), were transformed to NAD 83 (2011/PA11/MA11) maintaining the
<PID>***currently published epoch of 2010.00.
<PID>
<PID>***The MYCS2 NAD 83 coordinates are shown with adjustment dates of June,
<PID>***July, or August 2019. Previous CORS NAD 83 coordinates (if any) are
<PID>***given in the superseded section of the datasheet.
<PID>
<PID>***Additional information on MYCS2 is available at
<PID>***https://geodesy.noaa.goc/CORS/coords.shtml
```

CORS that are part of this realization will also show an updated link for the coordinates page on their datasheets:

```
<PID>'   ftp://cors.ngs.noaa.gov/cors/coord/coord_14
```

Prior to this it was:

<PID>' ftp://cors.ngs.noaa.gov/cors/coord/coord_08

Additionally, datasheets for modeled CORS will now display the following paragraph on their datasheets:

```
<PID>.Formal positional accuracy estimates are not available for this CORS
<PID>.because its coordinates were determined in part using modeled
<PID>.velocities. Approximate one-sigma accuracies for latitude, longitude,
<PID>.and ellipsoid height can be obtained from the short-term time series.
<PID>.Additional information regarding modeled velocities is available on
<PID>.the CORS Coordinates for MYCS2 web page: https://www.ngs.noaa.gov/CORS/coords.shtml.
```

Prior to this it was:

```
<PID>.Formal positional accuracy estimates are not available for this CORS
<PID>.because its coordinates were determined in part using modeled
<PID>.velocities. Approximate one-sigma accuracies for latitude, longitude,
<PID>.and ellipsoid height can be obtained from the short-term time series.
<PID>.Additional information regarding modeled velocities is available on
<PID>.the CORS Coordinates and Multi-Year CORS Solution FAQ web pages.
```

A datasheet displaying all of the above changes is shown below with special emphasis on the highlighted green text.

```

 DQ6620.and adjusted by the National Geodetic Survey in October 2017.
 DQ6620
 DQ6620.NAD 83(2011) refers to NAD 83 coordinates where the reference frame has
 DQ6620.been affixed to the stable North American Tectonic Plate.
 DQ6620
 DQ6620.The coordinates are valid at the epoch date displayed above
 DQ6620.which is a decimal equivalence of Year/Month/Day.
 DQ6620
 DQ6620.Due to the release of the International GNSS Service (IGS) 2014
 DQ6620.realization of the International Terrestrial Reference Frame of 2014
 DQ6620.(ITRF2014), NGS reprocessed all NOAA CORS Network and some IGS stations
 DQ6620.using data collected between 1/1/1996 and 1/30/2017. The resulting ITRF2014
 DQ6620.epoch 2010.00 coordinates, referred to as Multi-Year CORS Solution 2
 DQ6620.(MYCS2), were transformed to NAD 83 (2011/PA11/MA11) maintaining the
 DQ6620.currently published epoch of 2010.00.
 DQ6620
 DQ6620.Additional information on MYCS2 is available at
```

```
 DQ6620.https://geodesy.noaa.gov/CORS/coords.shtml
 DQ6620
 DQ6620.Significant digits in the geoid height do not necessarily reflect accuracy.
 DQ6620.GEOID12B height accuracy estimate available here.
 DQ6620
 DQ6620.The PID for the CORS L1 Phase Center is DQ6621.
 DQ6620
 DQ6620.Click here to see if photographs exist for this station.
 DQ6620
 DQ6620.The XYZ, and position/ellipsoidal ht. are equivalent.
 DQ6620
 DQ6620.The ellipsoidal height was determined by GPS observations
 DQ6620.and is referenced to NAD 83.
 DQ6620
 DQ6620. The following values were computed from the NAD 83(2011) position.

Below is a list of specific control points that are publishable in the Gulf Coast Dynamic Region/Subsidence Area.

UID	PID	EPOCH
10484553	BG1724	2009.55
10166440	BW0856	2009.55

Version 8.12.5.3 updated on 05/22/2019

The Observation & Analysis Division (OAD) recently added 1,500 historical elevations/heights in Louisiana and Mississippi to the NGS database under project 00000729. These marks are in the Gulf Coast dynamic region/subsidence area which extends through parts of Alabama, Florida, Louisiana, Mississippi, and Texas. These historical elevations/heights are not normally displayed on datasheets unless the checkbox *Include suspect heights in vertical motion areas* is checked on the datasheet retrieval web pages. Example PIDs are AU0965, AU1306, and AU2210. The historical elevation/height can be seen in the examples below for each of these PIDs when this checkbox is checked.

```
AU0965                          SUPERSEDED SURVEY CONTROL
AU0965
AU0965  NAD 83(2007)-  29 54 34.72186(N)    090 05 03.11162(W) AD(       ) 0

```

As a result of loading these 1,500 historical elevations/heights into the NGS database, several messages displayed on the datasheets that have a historical elevation/height that is in project 00000729 were modified. An example PID showing these message changes is BK0694; its partial datasheet is shown below with the highlighted changes for the messages in green.

```

Version 8.12.5.2 updated on 11/01/2018

In this version of datasheet95 V8.12.5.2, two issues have been corrected.

Issue #1: Marks whose best position had a weak position quality (i.e. POSITION.POS_QUALITY='W') were flagged as unpublishable and would not display a datasheet. Now, these marks display a datasheet if they are not flagged as unpublishable for other reasons (i.e. lack of descriptive text, etc.). If they are unpublishable for other reasons, then the datasheet reason codes are displayed. As a result of this change, the following marks now generate datasheets:

BH2805
BJ1303
BJ1337
BJ1519
BJ1550
BJ1931
CO0892
DB1521
DW0998
EB3056
EC1323

```
EC1328
EC1341
EC1377
EC1418
EG0595
FA1981
FA2011
FA2032
FA2172
FA2839
FA2850
FD1000
GC2313
GW1322
GZ1493
HT3454
JD0047
JD2086
KD1261
KE1342
LW5588
PE0221
PP2995
PQ0663
QP0438
QP1096
QP1243
SW1078
SW1547
TH0194
TO0484
TP0019
TP0023
TP0074
TP0156
TP0201
TR0824
TV0742
TV1488
TV1490
```

Issue #2: Marks that were presumed destroyed (i.e. HISTORY.COND='Z') now display the message:

```
*** NOTE - The station below is presumed destroyed.
```

Example PIDs are:

```
JA1410
JA1433
SB0953
KD0865
```

Prior to this they said:

```
*** NOTE - The station below is destroyed.
```

Marks that are actually destroyed (HISTORY.COND='X' or 'Y') still display the message:

```
*** NOTE - The station below is destroyed.
```

Example PIDs are:

```
TB0830
```

```
BJ1338
BJ1521
BJ3774
HV1673
DC1999
TP0912
```

The definitions of these condition codes mentioned here are:

X - Surface mark reported destroyed
Y - Surface and underground mark reported destroyed
Z - Presumed destroyed

Version 8.12.5.1 updated on 10/03/2018

In this version of datasheet95 V8.12.5.1, five issues have been corrected. This version of datasheet95 was updated in coordination with the get_mark_list V2.28.5 program, the program which displays the listing of marks on the datasheet retrieval pages.

Issue #1: Puerto Rican datasheets that formerly had a blank USGS QUADS field are no longer blank. An example PID is AB9749.

```
1        National Geodetic Survey,   Retrieval Date = SEPTEMBER 21, 2018
 AB9749 ***********************************************************************
 AB9749  SACS        -  This is a Secondary Airport Control Station.
 AB9749  DESIGNATION -  PSE F
 AB9749  PID         -  AB9749
 AB9749  STATE/COUNTY-  PR/PONCE
 AB9749  COUNTRY     -  US
 AB9749  USGS QUAD   -  PONCE (1982)
. . .
```

Issue #2: No datasheet will be produced for control points/marks that are L1 Phase Centers. They will instead produce a datasheet reason code of 'L' both horizontally and vertically as shown below for PIDs AA9859, AE1860, CQ5983, and DM2003

```
Elapsed Time = 00:00:09
Msg=FATAL_ERROR - No Marks found

 ------------------------------------------------------------------------------
 -   This listing contains control for which complete digital                 -
 -   data sheets where not provided.  The complete data sheets were           -
 -   not provided for the reason listed below.  The reason below is           -

```

Issue #3: Prior to this version of the get_mark_list V2.28.5 program, user would see a destroyed mark only if its horizontal order and vertical order were not null/blank. This rule has been eliminated. Users should now see all destroyed marks regardless of their horizontal/vertical order. Example PIDs: DC2000, HV1673, KB0434, JA0689, JA1410, and JD2350. Previously, 4 of the 6 PIDs (DC2000, HV1673, KB0434, and JD2350) in this example would appear in the get_mark_list.w output while JA0689 and JA1410 did not.

Steps:

(1) Go to https://test.nosngs.noaa/cgi-bin/ds_pid.prl, enter

```
DC2000
HV1673
KB0434
JA0689
JA1410
JD2350
```

into the PID box, check the `Include Destroyed Marks` checkbox, and press the *[Submit]* button. You should see the following output (6 records in total and no less) in the get_mark_list output:

```
|Dist|PID...|Set.|Set_By|H V|Vert_Source|Latitude.....|Longitude.....|Stab|C|Designation
|----|------|----|------|- -|-----------|-------------|--------------|----|-|-----------
|....|DC2000|UNK.|......|3 .|...........|N324404.22319|W1163439.54188|....|Y|LOS PINOS FOREST

|....|JD2350|1934|CGS...|. 2|88/ADJUSTED|N381022......|W0931859......|....|Z|J 35
```

Issue #4: Prior to the update of the get_mark_list V2.28.5 program, the user would see "SORRY - No Station Found" for non-destroyed marks if a mark's horizontal order and vertical order were both null/blank. Example PIDs (all TBMs): JA0534, KA0024, LB1018, RD0191. This rule on horizontal/vertical order is no longer in place. Users will now see these previously curtailed marks in the list of marks.

Note: these marks will not have publishable datasheets because they are temporary benchmarks (TBMs). They will instead show the datasheet reason code of T both horizontally and vertically.

Steps:

(1) Go to https://test.nosngs.noaa/cgi-bin/ds_pid.prl, enter

```
JA0534
KA0024
LB1018
RD0191
```

into the PID box, and press the *[Submit]* button.

You should see the following output (must show all 4 records) in the get_mark_list output:

```
|Dist|PID...|Set.|Set_By|H V|Vert_Source|Latitude.....|Longitude.....|Stab|C|Designation
|----|------|----|------|- -|-----------|-------------|--------------|----|-|-----------
|....|JA0534|UNK.|USGS..|. .|...........|N382006......|W0863723......|B...|G|TBM 617.2 U
|....|KA0024|UNK.|CGS...|. u|29/ADJ UNCH|N394001......|W0861050......|B...|G|TBM 351
|....|LB1018|UNK.|DOD...|. 3|29/RESET...|N404006......|W0863750......|B...|G|TBM 236 B
|....|RD0191|UNK.|CGS...|. u|29/ADJ UNCH|N451214......|W1220906......|D...|N|TBM 1 W
```

(2) On the next page, press the `[Select All]` button, followed by the `[Get Datasheets]` button. You should see the following output (with special emphasis on the highlighted text in green):

```
1.3  The NGS Data Sheet - PRODUCTION

1.3.1.1.1  See file dsdata.pdf for more information about the datasheet.

```

Issue #5: No CORS can be set by or recovered by anyone other than the CORS team/members. However, CORS that were "recovered" using the NGS Recovery page at http://ngs-vsu-io.ngs.noaa.gov/cgi-bin/recvy_entry_www.prl would end up displaying a Set (Date) that was a "recovered" date and also a Set_By (Agency) of the agency that "recovered" the mark/control point. With this latest get_mark_list V2.28.5 program, any mark/control point that is a CORS will no longer display a "recovery" date or the agency it was "recovered" by in the output.

Steps:

(1) Go to https://test.nosngs.noaa/cgi-bin/ds_pid.prl, enter

```
AF9513
AF9536
AF9579
AF9594
AM7017
AW5607
DE8088
DF6318
DG6513
DI2224
```

into the PID box, and press the *[Submit]* button.

You should see the following output in the get_mark_list output:

```
|Dist|PID...|Set.|Set_By|H V|Vert_Source|Latitude.....|Longitude.....|Stab|C|Designation

Version 8.12.5 updated on 06/05/2018

In this version of datasheet95 V8.12.5, the algorithm for how we select the best height was updated to accommodate changes in how NGS is receiving/processing the data. There were 69 US states/territories and 1,560,625 marks examined. Of these, 4,129 marks were identified as potentially displaying a different best height on their datasheets. In actuality, only 150 of these 4,129 marks actually changed their best height on their datasheet. Below is a table showing the breakdown by state of the potential and actual marks affected by this algorithm change.

Table 1
Marks in the US States/Territories Affected By The New Best Height Algorithm

STATE	STATE_NAME	DATUM	Total # of Marks in State	Potentially Affected by new Best Height Algorithm	Actually Affected by new Best Height Algorithm	% Affected

Version 8.12.4.1 updated on 03/12/2018

The datasheet95 V8.12.4.1 was updated to correct an issue with generating the monthly (archived) state-wide datasheets. Duplicate datasheets were appearing in the output.

Version 8.12.4 updated on 01/25/2018

The datasheet95 V8.12.4 was updated to implement a security patch. Users should not notice any changes.

Version 8.12.3 updated on 09/12/2017

The Observation & Analysis Division (OAD) in NGS recently added a new elevation technique code of "E" (ELEV_TECH='E') to the NGS database to better describe this method of determining orthometric heights in AK as well as for future projects in other areas. The definition of the new "E" code is "OHT ESTABLISHED BY SUBTRACTING A GEOID_HT FROM AN ELLIP_HT". Data in the NGS database for this new elevation technique did not exist until very recently. In datasheet95 V8.12.2 an elevation with this new type of elevation technique, DM5205, was added to the NGS database. The ORTHOMETRIC HEIGHT line for this mark displayed "N-H COMP":

```
DM5205* NAVD 88 ORTHO HEIGHT -    48.53   (meters)      159.2    (feet) N-H COMP
```

When it should have displayed h-N COMP. This release of datasheet95 V8.12.3 corrects this to h-N COMP for marks that have an elevation technique of 'E', as shown in the example below:

```
DM5205* NAVD 88 ORTHO HEIGHT -    48.53   (meters)      159.2    (feet) h-N COMP
```

Version 8.12.2 updated on 07/19/2017

This release of datasheet95 V8.12.2 applies change requests, CM-268, CM-357, CM-410, and CM-411.

The change requests can be found in JIRA at:
https://euclid.ngs.noaa.gov/jira/browse/CM-268
https://euclid.ngs.noaa.gov/jira/browse/CM-357
https://euclid.ngs.noaa.gov/jira/browse/CM-410
https://euclid.ngs.noaa.gov/jira/browse/CM-411

CM-268: CORS coordinates (i.e. positions) whose coordinates are held fixed during a major readjustment, are considered to be duplicates of the best position for a mark. Because of this, the coordinates and matching ellipsoid height info are not normally printed in the SUPERSEDED SURVEY CONTROL section of the datasheet. Li Jian Sun of the CORS team had a single special case CORS whose previously held coordinate with matching ellipsoid height was needed on its datasheet for historical purposes. For CORS site TXDA (i.e. PID=DF8984), the SUPERSEDED SURVEY CONTROL section of its datasheet will now display the following lines in the SUPERSEDED SURVEY CONTROL section:

```
DF8984                          SUPERSEDED SURVEY CONTROL
DF8984
DF8984  NAD 83(2011)-  32 47 59.92785(N)    096 40 22.45344(W) AD(2010.00) c
DF8984  ELLIP H (09/??/14)  161.847  (m)                       GP(2010.00) c c
DF8984  NAD 83(2011)-  32 47 59.92724(N)    096 40 22.45331(W) AD(2010.00) c
DF8984  ELLIP H (08/??/11)  161.889  (m)                       GP(2010.00) c c
DF8984  NAD 83(CORS)-  32 47 59.92727(N)    096 40 22.45388(W) AD(2002.00) c
DF8984  ELLIP H (11/??/03)  161.907  (m)                       GP(2002.00) c c
DF8984
DF8984.Superseded values are not recommended for survey control.
DF8984
DF8984.NGS no longer adjusts projects to the NAD 27 or NGVD 29 datums.
DF8984.See file dsdata.pdf to determine how the superseded data were derived.
```

CM-357: NGS is about to redo all the vertical in Alaska. Up until this time, NGS has been using the Horizontal GPS (i.e. ELEV_SOURCE='H' and ELEV_TECH='G') codes in the NGS database to obtain orthometric heights due to sparse leveling in lieu of a more accurate code. In this release of datasheet95 V8.12.2, the Observation & Analysis Division (OAD) in NGS has added a new elevation technique code of "E" (ELEV_TECH='E') to the NGS database to better describe this method of determining orthometric heights in AK as well as for future projects in other areas. The definition of the new "E" code is "OHT ESTABLISHED BY SUBTRACTING A GEOID_HT FROM AN ELLIP_HT".

For marks/control points that have this new elevation technique of "E", the following paragraph will be displayed on the datasheet:

```
<PID>.The orthometric height was established by subtracting the geoid height
<PID>.from an ellipsoid height for the control used in the least squares
<PID>.adjustment.
```

CM-410: Some scan_idb (i.e. in-house only) datasheets were not displaying all the GEOID_HT info on their datasheets. *This did not affect public datasheets whatsoever!*

If one goes to the internet URL https://www.ngs.noaa.gov/cgi-bin/ds_pid.prl, puts in DL8768 and DM5173 for the PIDs and presses the [Submit] button, and then on the next page presses the [Select All] button followed by the [Get Datasheets] button, he/she will see public datasheets with the following lines:

```
DL8768  NAVD 88 orthometric height was determined with geoid model    GEOID09
DL8768  GEOID HEIGHT    -         -2.775 (meters)                     GEOID09
DL8768  GEOID HEIGHT    -         -2.807 (meters)                     GEOID12B
DL8768  NAD 83(2011) X  - -1,993,055.627 (meters)                     COMP
DL8768  NAD 83(2011) Y  -   -725,567.031 (meters)                     COMP
DL8768  NAD 83(2011) Z  -  5,994,982.948 (meters)                     COMP
DL8768  LAPLACE CORR    -         -8.19  (seconds)                    DEFLEC12B

DM5173  NAVD 88 orthometric height was determined with geoid model    GEOID09
DM5173  GEOID HEIGHT    -         -1.423 (meters)                     GEOID09
DM5173  GEOID HEIGHT    -         -1.368 (meters)                     GEOID12B
DM5173  NAD 83(2011) X  - -2,119,208.805 (meters)                     COMP
DM5173  NAD 83(2011) Y  -   -647,430.493 (meters)                     COMP
DM5173  NAD 83(2011) Z  -  5,960,788.929 (meters)                     COMP
DM5173  LAPLACE CORR    -          7.69  (seconds)                    DEFLEC12B
```

Prior to this release, if one retrieved a scan_idb datasheets for these same two marks via the intranet URL http://ngsweb.ngs.noaa.gov/cgi-bin/scan_idb_pid.prl, one would have seen scan_idb datasheets with the following lines:

```
DL8768  NAVD 88 orthometric height was determined with an earlier geoid model
DL8768  GEOID HEIGHT    -         -2.807 (meters)                     GEOID12B
DL8768  NAD 83(2011) X  - -1,993,055.627 (meters)                     COMP
DL8768  NAD 83(2011) Y  -   -725,567.031 (meters)                     COMP
DL8768  NAD 83(2011) Z  -  5,994,982.948 (meters)                     COMP
DL8768  LAPLACE CORR    -         -8.19  (seconds)                    DEFLEC12B

DM5173  NAVD 88 orthometric height was determined with an earlier geoid model
DM5173  GEOID HEIGHT    -         -1.368 (meters)                     GEOID12B
DM5173  NAD 83(2011) X  - -2,119,208.805 (meters)                     COMP
DM5173  NAD 83(2011) Y  -   -647,430.493 (meters)                     COMP
DM5173  NAD 83(2011) Z  -  5,960,788.929 (meters)                     COMP
DM5173  LAPLACE CORR    -          7.69  (seconds)                    DEFLEC12B
```

Notice on the scan_idb datasheet outputs that they are missing the lines:

```
DL8768  NAVD 88 orthometric height was determined with geoid model    GEOID09
DL8768  GEOID HEIGHT    -         -2.775 (meters)                     GEOID09

DM5173  NAVD 88 orthometric height was determined with geoid model    GEOID09
DM5173  GEOID HEIGHT    -         -1.423 (meters)                     GEOID09
```

They shouldn't have been missing these lines. This issue has been fixed with the datasheet95 V8.12.2 program update. If one goes to the intranet URL http://ngsweb.ngs.noaa.gov/cgi-bin/scan_idb_pid.prl, puts in PIDs DL8768 and DM5173 into the PID box, presses

the [Submit] button, and then on the next page presses the [Select All] button followed by the [Get Datasheets] button, he/she should see scan_idb datasheets with the following lines:

```
DL8768  NAVD 88 orthometric height was determined with geoid model    GEOID09
DL8768  GEOID HEIGHT    -         -2.775 (meters)                     GEOID09
DL8768  GEOID HEIGHT    -         -2.807 (meters)                     GEOID12B
DL8768  NAD 83(2011) X  - -1,993,055.627 (meters)                     COMP
DL8768  NAD 83(2011) Y  -   -725,567.031 (meters)                     COMP
DL8768  NAD 83(2011) Z  -  5,994,982.948 (meters)                     COMP
DL8768  LAPLACE CORR    -         -8.19  (seconds)                    DEFLEC12B

DM5173  NAVD 88 orthometric height was determined with geoid model    GEOID09
DM5173  GEOID HEIGHT    -         -1.423 (meters)                     GEOID09
DM5173  GEOID HEIGHT    -         -1.368 (meters)                     GEOID12B
DM5173  NAD 83(2011) X  - -2,119,208.805 (meters)                     COMP
DM5173  NAD 83(2011) Y  -   -647,430.493 (meters)                     COMP
DM5173  NAD 83(2011) Z  -  5,960,788.929 (meters)                     COMP
DM5173  LAPLACE CORR    -          7.69  (seconds)                    DEFLEC12B
```

CM-411: Geodesist Vasanthi Kammula added two projects to the list of valid projects in the Gulf Coast dynamic region/subsidence area:

(1) 00000729/3 with epoch 2009.55.
(2) 00000729/4 with epoch 2009.55.

Both of these projects are valid in the state of Mississippi (MS).

Below is the list of all the valid projects for the Gulf Coast dynamic region/subsidence area (new records are highlighted in green).

Project	Epoch
00000729/1	2009.55
00000729/2	2009.55
00000729/3	2009.55
00000729/4	2009.55
00000730/1	2009.55
00000730/2	2009.55
00000730/3	2009.55
00000730/4	2009.55
00000730/5	2009.55
00000731	2009.55
00000732	2009.55
00000772	2009.55
00000803	2009.55
00000840	2009.55
00000857	2009.55
GPS2021/C	2004.65
GPS2100	2004.65
GPS2212	2004.65
GPS2262	2004.65
GPS2287	2004.65
GPS2307	2004.65
GPS2329	2006.81
GPS2896/B	2009.55
GPS2896/C	2009.55
GPS2995	2009.55
GPS2995/B	2009.55

Additionally, below is a list of the valid project/state combinations within the Gulf Coast dynamic region/subsidence area (new records are highlighted in green).

Subsidence Project	State
00000729/1	AL
00000729/1	FL
00000729/1	LA
00000729/1	MS
00000729/1	TX
00000729/2	AL
00000729/2	MS
00000729/3	MS
00000729/4	MS
00000730/1	AL
00000730/2	AL
00000730/3	AL
00000730/4	AL
00000730/5	AL
00000730/5	MS
00000731	FL
00000732	TX
00000772	MS
00000803	MS
00000840	MS
00000857	FL
GPS2896/B	LA
GPS2896/B	MS
GPS2896/B	AL
GPS2896/C	LA
GPS2896/C	MS
GPS2896/C	AL
GPS2995	LA
GPS2995/B	LA

Finally, below is a list of specific control points that are publishable in the Gulf Coast dynamic region/subsidence area (new records and a new column are highlighted in green).

UID	**PID**	**EPOCH**
10484553	BG1724	2009.55
10166440	BW0856	2009.55

The following PIDs are in the two new Gulf Coast dynamic region/subsidence area projects of 00000729/3, and 00000729/4:

AB7977
BV0683

```
BV0712
BV0736
BV1243
BV1947
DQ4508
DQ4509
DQ4510
DQ4511
DQ4512
DQ4513
DQ5128
DQ5129
DQ5130
DQ5131
DQ5132
DQ5133
DQ5134
DQ5135
DQ5136
DQ5137
DQ5138
```

All 23 of these PIDs/marks generate datasheets with publishable [ortho] heights and have an EPOCH of 2009.55

There are two additional PIDs that are publishable in the Gulf Coast dynamic region/subsidence area that are not in these two newly added projects. These PIDs are:

```
BG1724
BW0856
```

These exception PIDs should display a datasheet with a publishable ORTHO HEIGHT and have an EPOCH of 2009.55.

Some marks in the Gulf Coast dynamic region/subsidence area that were also part of the NSRS2007 readjustment, displayed datasheets where the superseded NSRS2007 position's epoch did not match the corresponding superseded ellip_ht's epoch. This can be seen in the example datasheet snippet for BK1020.

```
BK1020                          SUPERSEDED SURVEY CONTROL
BK1020
BK1020 NAD 83(2007)- 30 20 58.87746(N) 092 43 24.59536(W) AD(2002.00) A
BK1020 ELLIP H  (03/12/08) -15.646 (m) GP(2006.81) 3 1
```

This was happening because of the algorithm for the superseded positions in a dynamic region/subsidence area. Prior to this release of datasheet95 V8.12.2, the epoch on a superseded position on the datasheet displayed is 2002.00 instead of the epoch value (e.g. 2006.81) from the POS_CM (crustal motion) table if:

(1) the dtm_tag was "NAD 83(2007)"
(2) the state was not in (AK, AZ, CA, NV, OR, WA)

The updated algorithm now takes into account that the mark is in a dynamic region/subsidence area. Thus, the epoch on a superseded position on the datasheet displayed is 2002.00 instead of the epoch value from the POS_CM (crustal motion) table if:

(1) the dtm_tag is NAD 83(2007)

(2) the mark is not in a dynamic region/subsidence area

(3) the state is not in (AK, AZ, CA, NV, OR, WA)

This can be seen on the updated example datasheet (i.e. datasheet95 V 8.12.2) snippet for BK1020 below.

```
BK1020 SUPERSEDED SURVEY CONTROL
BK1020
BK1020 NAD 83(2007)- 30 20 58.87746(N) 092 43 24.59536(W) AD(2006.81) A
BK1020 ELLIP H (03/12/08) -15.646 (m) GP(2006.81) 3 1
```

Version 8.12.1 update on 03/29/2017

This release of datasheet95 V8.12.1 applies change request, CM384. This change request applies only to internal NGS only (scan_idb) datasheets, and not datasheets for the public/external users. There was a flag that was not turned off during the release of datasheet95 V8.12 for this internal version. This caused the message:

```
<PID> ** No published orthometric height exists and therefore all are
<PID> ** considered suspect. This station did not take part in a recent
<PID> ** survey which established orthometric heights in the area.  Therefore,
<PID> ** any previously published orthometric heights have not been validated.
<PID> ** NGS does not recommend using suspect or superseded heights as control
<PID> ** unless they can be validated or a new height established.
<PID> ** If this station were to take part in a new project and submitted
<PID> ** to NGS a new height could be published.
```

to be displayed on some datasheets when it shouldn't. In the message above, <PID> represents a PID value such as AI6623, AC6803, JV1374, etc. In this minor release, the flag has been turned off and this message will no longer appear on internal NGS only (scan_idb) datasheets.

Version 8.12 update on 03/06/2017

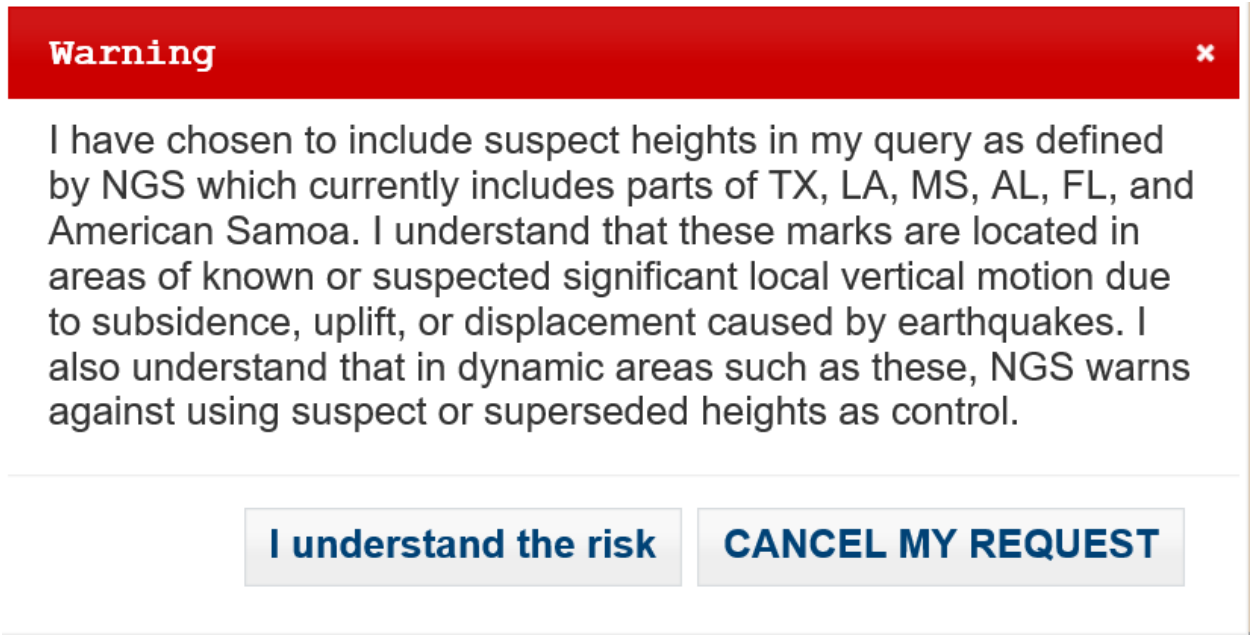
This release of datasheet95 V8.12 applies two change requests, CM-311, and CM-325, two tasks, TM-2624 and TM-2645, and one software request, IMSRQ-520.

CM-311 - Suspect heights in American Samoa: Make sure that these American Samoa PIDs display the following warning message whenever the *Include suspect heights* checkbox is checked on the various datasheet web retrieval pages and that the paragraph below also appears on American Samoa datasheets if a datasheet is generated.

Steps:

(1) Go to the datasheet web page https://www.ngs.noaa.gov/cgi-bin/ds_county.prl

(2) Select AMERICAN SAMOA from the *Pick a State:* drop down list box and press the [Get County List] button.
(3) On the next screen, select AS|010|EASTERN (DISTRICT) from the *Pick a County* drop down list box, check the Include suspect heights in vertical motion areas checkbox, leave all other defaults on the screen, and press the [Submit] button. You should see the Warning message below.



(4) Continuing on… press the [I understand the risk] button. A list of datasheets for the county selected will be displayed. Press the [Select All] button to select all of the marks from the listing and then press the [Get Datasheets] button.
(5) You should see the exact paragraphs on each AS datasheet (if a datasheet is produced).

```
<PID> ** The published heights of stations in this area may have changed
<PID> ** by more than 10 cm due to earthquakes.  NGS strongly warns
<PID> ** against the use of such suspect heights as control.
```

and

```
<PID> ** No published orthometric height exists and therefore all are
<PID> ** considered suspect. This station did not take part in a recent
<PID> ** survey which established orthometric heights in the area.  Therefore,
<PID> ** any previously published orthometric heights have not been validated.
<PID> ** NGS does not recommend using suspect or superseded heights as control
<PID> ** unless they can be validated or a new height established.
<PID> ** If this station were to take part in a new project and submitted
<PID> ** to NGS a new height could be published.
```

CM-312 - update DSData.txt file with new DSData file: On the datasheets any links to text with dsdata.txt on them have been replaced with dsdata.pdf.

IMSRQ-520 - datasheet95 contains wrong web link, Geoid 12B as opposed to EGM08:
Datasheets that use the EGM08 GEOID vs GEOID12B should not have the following text with hyperlink on the datasheet any longer:

```
<PID>.EGM08 height accuracy estimate available here.
```

Steps:

(1) Go to https://www.ngs.noaa.gov/cgi-bin/ds_pid.prl and put the following PIDs into the PID List:

```
AA4435
AA4436
DQ2174
```

and then press the [Submit] button. These PIDs use the geoid model, EGM08.

(2) On the next screen, press the [Select All] button, and then press the [Get Datasheets] button.
(3) When the datasheets display, in your browser, search for "`EGM08 height accuracy estimate available`". You should not be able to find it.

TM-2624 - wrong SPCS code for HONOLULU TIDE GAU CORS ARP: Make sure that the primary SPC line does not display on datasheets for Hawaiian datasheets in Honolulu county that have a longitude > W1600000.

Steps:

(1) Go to https://www.ngs.noaa.gov/cgi-bin/ds_pid.prl and put the following PIDs into the PID List:

```
DE5195
DE5202
DE5228
DE5231
DE5246
DE5247
DE5248
DE5249
```

and then press the [Submit] button.

(2) On the next screen, press the [Select All] button, and then press the [Get Datasheets] button.

(3) When the datasheets display, in your browser, search for "`North East`".

The datasheets should look like this (where no primary SPC line is displayed directly under the `DE5228; North East Units Scale Factor Converg.` line).

```
DE5228;                  North         East     Units Scale Factor Converg.
DE5228;UTM  03      - 2,768,189.132   197,290.902   MT  1.00073179   -1 16 05.9
DE5228;UTM  02      - 2,768,194.093   802,933.088   MT  1.00073347   +1 16 09.3
DE5228
DE5228!             -  Elev Factor  x  Scale Factor =   Combined Factor
DE5228!SPC HI 5     -   0.99998814  x   1.00775802  =   1.00774607
DE5228!UTM  03      -   0.99998814  x   1.00073179  =   1.00071992
DE5228!UTM  02      -   0.99998814  x   1.00073347  =   1.00072160
```

Previously, it looked like this:

```
DE5228;                  North         East     Units Scale Factor Converg.
DE5228;SPC HI 5     -   392,034.498 -,292,265.891   MT  1.00775802   -3 19 38.0
DE5228;UTM  03      - 2,768,189.132   197,290.902   MT  1.00073179   -1 16 05.9
DE5228;UTM  02      - 2,768,194.093   802,933.088   MT  1.00073347   +1 16 09.3
DE5228
DE5228!             -  Elev Factor  x  Scale Factor =   Combined Factor

```

TM-2645 fix state/county codes for remote Hawaiian marks: Make sure that the scan_idb datasheets (i.e. in-house only NGS datasheets, not publicly publishable) for PIDs DE5211, DE5212, DE5213, and DE5229 show that they are in county 007. Also make sure that the scan_idb_datasheets for PIDs CQ9890, CQ9936, and TW0160 show that they are in the state of MQ and county 010.

Steps:

(1) Go to https://ngsweb.ngs.noaa.gov/cgi-bin/scan_idb_pid.prl and put the following PIDs into the PID List:

```
CQ9890
CQ9936
DE5211
DE5212
DE5213
DE5229
TW0160
```

and then press the [Submit] button.

(2) On the next screen, press the [Select All] button, and then press the [Get Datasheets] button.
(3) When the datasheets display, in your browser, search for "STATE/COUNTY- " on each datasheet. You should see the following lines.

```
CQ9890  STATE/COUNTY-  MQ/MIDWAY
CQ9936  STATE/COUNTY-  MQ/MIDWAY
DE5211  STATE/COUNTY-  HI/KAUAI
DE5212  STATE/COUNTY-  HI/KAUAI
DE5213  STATE/COUNTY-  HI/KAUAI
DE5229  STATE/COUNTY-  HI/KAUAI
TW0160  STATE/COUNTY-  MQ/MIDWAY
```

The get_mark_list program was also updated in conjunction with datasheet95 V2.28. The release of get_mark_list V2.28 incorporates two change requests (CRs): CM-312, and CM-365.

CM-312 Set (Date) and Set By Field in get_mark_list have missing data: The Set (Date) and Set_By (Agency) fields in the output of the get_mark_list.w program are not fully being populated properly, but mostly properly. An example of a mark with this issue can be seen with PID JU2358. In the get_mark_list output it showed no Set (Date) nor Set_By (Agency) data, yet in-house NGS datasheet (i.e. scan_idb) for JU2358 showed that it was monumented in 1934 by CGS.

In get_mark_list.w V2.27 the code tells us that:

```
If the condition code is 'S' for original setting then grab the Set
(Date) and Set_By (Agency) from the history record with the condition
code of 'S'.
```

However, datasheet95.w V8.11 tells us to:

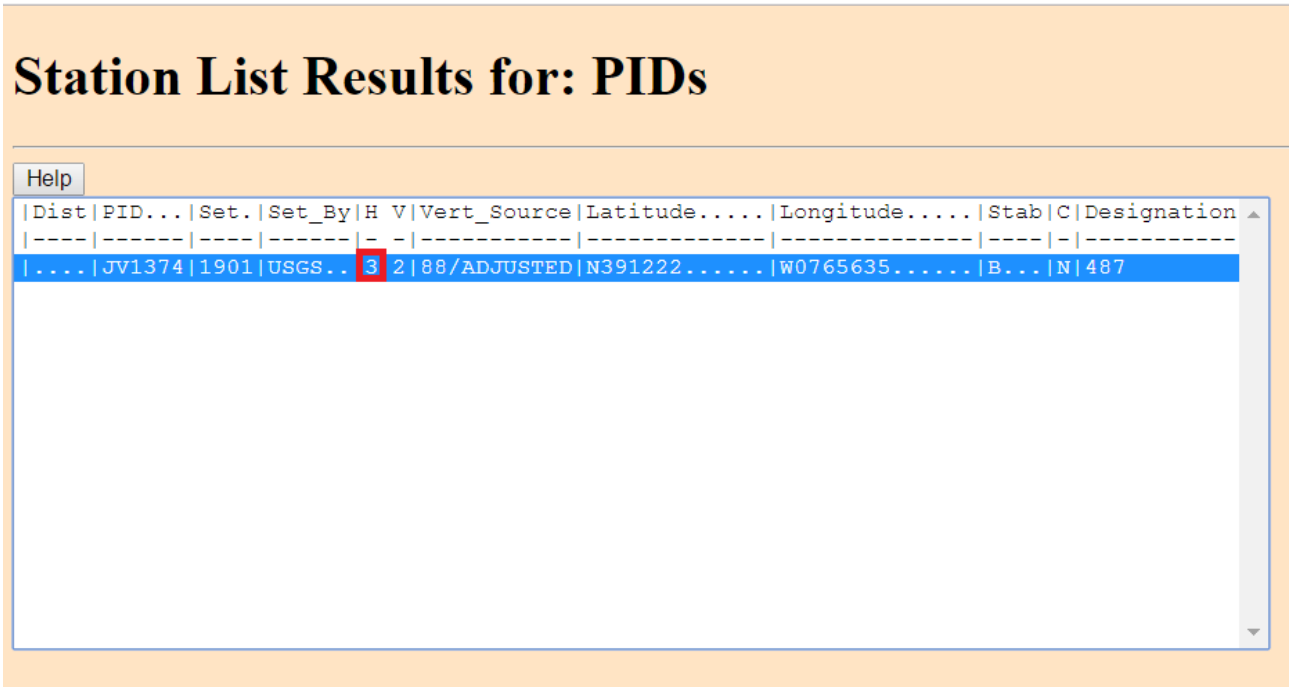
```
Sort the history records by recovery date. If the earliest history
record has a monumentation code that is not a digit then it is the
'MONUMENTED' or the record with the original setting.
```

It was found that the condition code should have nothing to do with whether it was monumented or not as the earliest record *is* the original setting. The NGSIDB.HISTORY table was checked for JU2358's NUID, there was only one history record that said that the condition code was 'Z' not 'S' but that it was monumented in 1934 by CGS.

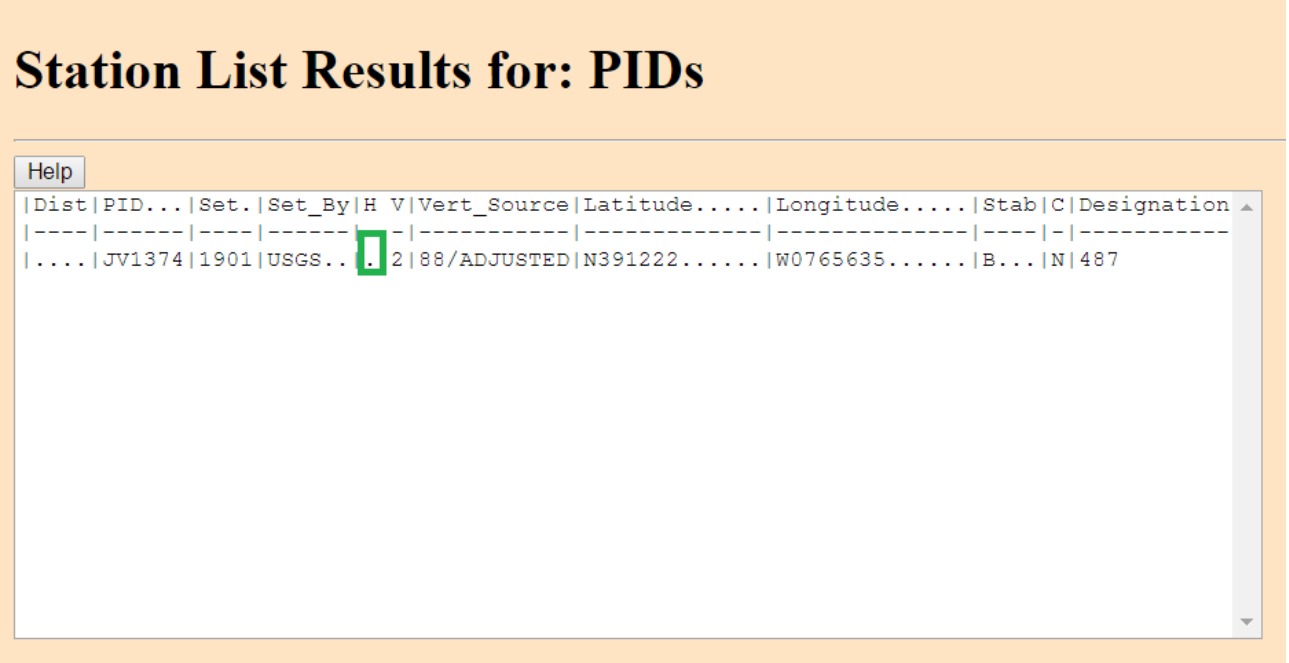
	NUID	DESIGNATION	PID	SET_CLASS	MONUMENT	STABILITY	MAGNETIC_MK	STATE	COUNTY	NUID_1	REPORT_DATE	REPORT_ID	LOAD_ID	COND	AGENCY	COP	SAT_USE	TRANSPOR	PACK_TIME	REPORT_TYPE	T_STATUS
1	10315851	L 4 RESET 1934	JU2358	(null)	(null)	(null)	(null)	NJ	009	10315851	1934	689012	0	Z	CGS	(null)	(null)	(null)	(null)	S	I

This means that the condition code does not tell us 100% of the time that it was an original setting; rather, the earliest history record does. Thus, in this release get_mark_list.w V2.28 was updated to have the same algorithm as datasheet95.w V8.11 does for getting the Set (Date) and Set_By (Agency) data to populate its Set (Date) and Set_By (Agency) fields in the output.

CM-365 get mark is showing the wrong horizontal order: The horizontal order (H column) was showing a 3rd order in the output of get_mark_list when the position was actually scaled off a map. The horizontal order was correct on the datasheet. An example of this issue can be seen when retrieving by PID (https://www.ngs.noaa.gov/cgi-bin/ds_pid.prl) with JV1374.



This issue inadvertently cropped up in the last revision of get_mark_list V2.27 and is corrected in get_mark_list V2.28, as show in the example output below.



Version 8.11 update on 11/06/2016

This release implements change request, CM-201. The changes are seen mainly in the get_mark_list V2.27 output, and minorly in the output from datasheet95 V8.11.

Changes to get_mark_list

If a mark is restricted in the NGS database, either horizontally or vertically) it should not appear in the output of get_mark_list.

In the prior release of the get_mark_list program (V2.26), if a user went to **http:/www.ngs.noaa.gov/cgi-bin/ds_pid.prl** and put in the following PIDs:

```
AF8523
DD3301
HV5076
KV1928
LW1669
LW1796
LW3267
LX3149
LX3452
LX3494
OH1680
```

into the PID box and pressed the `[Submit]` button, they would see the following output:

Station List Results for: PIDs

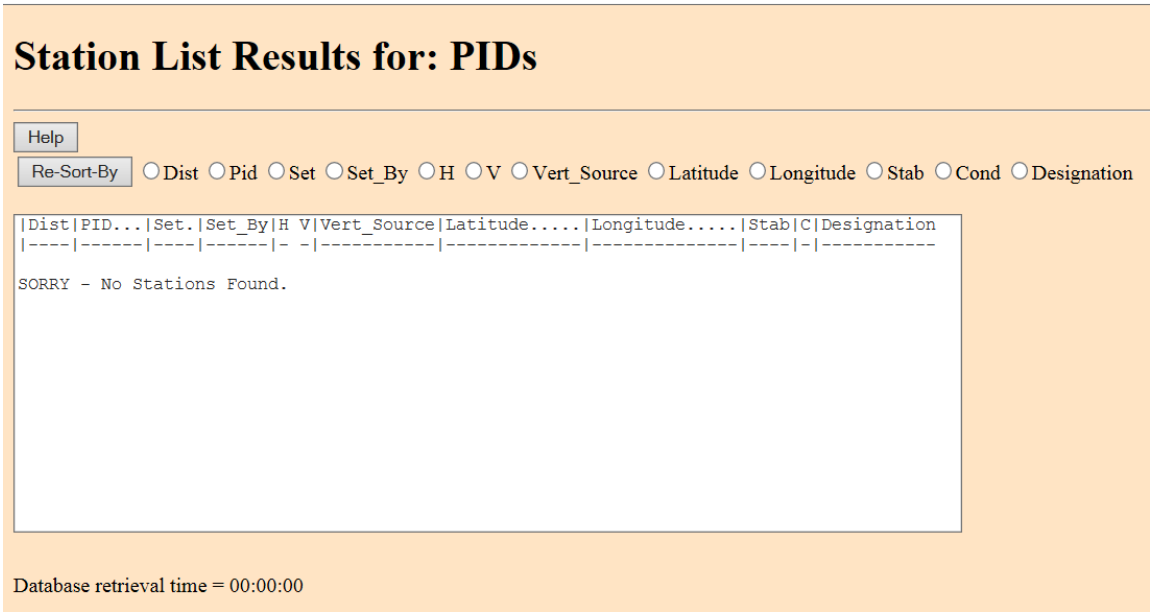
This is because all of these marks are restricted positionally in NGS's database.

Additional it was found that some destroyed marks appeared in the get_mark_list output without the *Include Destroyed Marks* checkbox being checked. Similarly, it was found that some destroyed marks didn't appear in the get_mark_list.w output whenenever the Include Destroyed Marks checkbox is checked. This has been corrected.

To see the corrections in get_mark_list V2.27, go to http:/www.ngs.noaa.gov/cgi-bin/ds_pid.prl and put in the following PIDs of destroyed marks:

```
JA0689
GE0077
KA0319
RA0403
SA1463
```

and press the [Submit] button. You should see the following message in the get_mark_list output:



In get_mark_list V2.27, if you go to**:** **http:/www.ngs.noaa.gov/cgi-bin/ds_pid.prl** and put in the following PIDs of destroyed marks:

```

```

In this release of datasheet95.w V8.11, if the control point is unpublishable for any one of the above reason codes, then the position and/or elevation of the mark(s) listed after the reason code paragraphs on the nonpub report are scaled. Mark examples that generate all of the possible reason codes are:

AA3150
AA4533
AA7403
AE4225
AI9454
AJ5872
AN0328
AW5059
BH2805
DC1262
DH4289
DN9398
DW1424
LW1669
TR1375

The nonpub report shows the following:

Msg=FATAL_ERROR - No Marks found

```
 ------------------------------------------------------------------------------

Version 8.10 update on 10/06/2016

There are four change requests that have been implemented in this release: CM-249, CM-250, CM-251, and CM-291.

CM-249 Changes

Sometimes the GEOID HEIGHT line(s) doesn't appear in the same location on the datasheet. In this change request, the GEOID HEIGHT line(s) will now always appear immediately before the X, Y, and Z lines. Before this release, TV1513's GEOID HEIGHT lines appeared as follows:

```
TV1513                          *CURRENT SURVEY CONTROL
TV1513  ______________________________________________________________________
TV1513* NAD 83(2011) POSITION- 18 27 32.23742(N) 066 06 59.20112(W)   ADJUSTED
TV1513* NAD 83(2011) ELLIP HT-   -41.639 (meters)        (06/27/12)   ADJUSTED
TV1513* NAD 83(2011) EPOCH    -  2010.00
TV1513* PRVD02  ORTHO HEIGHT -     1.334 (meters)        4.38  (feet) ADJUSTED
TV1513  ______________________________________________________________________
TV1513  NAD 83(2011) X  -  2,450,319.846 (meters)                     COMP
TV1513  NAD 83(2011) Y  - -5,533,748.432 (meters)                     COMP
TV1513  NAD 83(2011) Z  -  2,006,620.156 (meters)                     COMP

TV1513
TV1513  VERT ORDER      -  FIRST     CLASS II
```

CM-250 Changes

Continuous Operating Reference Stations (CORS), which are held fixed during the adjustment, Network accuracy values at CORS sites are considered to be infinitesimal (approach zero). Thus, there is no local accuracy data. However clicking on the link, here, in the partial CORS datasheet below

```
AF9522  Network accuracy estimates per FGDC Geospatial Positioning Accuracy
AF9522  Standards:
AF9522         FGDC (95% conf, cm)     Standard deviation (cm)     CorrNE
AF9522            Horiz  Ellip           SD_N   SD_E   SD_h      (unitless)
AF9522  ------------------------------------------------------------------
```

```
 AF9522  NETWORK    0.64   2.08           0.28   0.24   1.06      0.00974253
 AF9522  ---------------------------------------------------------------------
 AF9522  Click here for local accuracies and other accuracy information.
```

will display the network and local accuracy report with no local accuracies in the report (only network accuracy data appears).

The Local and Network Accuracy Data Sheet

```
Program lna_ret Version 2.7.2 Date June 2, 2016
National Geodetic Survey, Retrieval Date = JULY 12, 2016
 AF9522 ***********************************************************************
 AF9522  ACCURACIES  -  Complete network and local accuracy information.
 AF9522  HT_MOD      -  This is a Height Modernization Survey Station.
 AF9522  CORS        -  This is a GPS Continuously Operating Reference Station.
 AF9522  DESIGNATION -  GAITHERSBURG CORS ARP
 AF9522  PID         -  AF9522
 AF9522
 AF9522  Horiz and Ellip are the horizontal and ellipsoid height accuracies
 AF9522  at the 95% confidence level per Federal Geographic Data Committee
 AF9522  Geospatial Positioning Accuracy Standards.  SD_N, SD_E and SD_h are
 AF9522  the standard deviations (one sigma) of the coordinates (NETWORK) or
 AF9522  of the difference in the coordinates (LOCAL) in latitude, longitude
 AF9522  and ellipsoid height.  CorrNE is the (unitless) correlation
 AF9522  coefficient between the latitude and longitude components of either
 AF9522  the coordinate (NETWORK) or coordinate difference (LOCAL).  Dist is
 AF9522  the three-dimensional straight-line slope distance, in km, between
 AF9522  station AF9522 and the corresponding local station.  Local stations
 AF9522  are stations processed simultaneously in a session regardless of
 AF9522  distance.
 AF9522
 AF9522  Accuracy and standard deviation values are given in cm.
 AF9522
 AF9522  Type/PID  Horiz  Ellip  Dist(km)  SD_N   SD_E   SD_h         CorrNE
 AF9522  ---------------------------------------------------------------------
 AF9522  NETWORK   0.64   2.08             0.28   0.24   1.06    +0.00974253
 AF9522  ---------------------------------------------------------------------
```

Since there is no local accuracy data for CORS datasheets (i.e. CORS_TYPE in ('A', 'L', 'M')), the report is moot. This release removes the link to this report whenever the control point being looked at on the datasheet is a CORS.

CM-251 Changes

The National Grid line was requested to be moved to the same section of the datasheet as the SPC and UTM data, above the SUPERSEDED SURVEY CONTROL section. This release of datasheet95 V8.10 takes care of this. An example PID where this change took place is DI2806.

Before the change in datasheet95 V8.9:

```
DI2806;                    North         East     Units Scale Factor Converg.
DI2806;SPC HI 3     -    16,207.074   508,335.623   MT  0.99999086   +0 01 45.1
DI2806;UTM  04      - 2,357,175.886   612,047.871   MT  0.99975514   +0 23 33.7

CM-291 Changes

Due to a deficiency in COMDAT data, heights were being loaded into the NGSIDB that should not have been. This has resulted in hundreds and hundreds of heights on the datasheet that are actual duplicates of the published heights. In the SUPERSEDED SURVEY CONTROL section of datasheets, these heights appear with the verbiage "leveling" as the explanation. Additionally, there is a date the height was loaded giving the appearance of new leveling which is confusing and misleading. This release of datasheet95 V8.10 removes the load date from all leveling (i.e. ELEV_SOURCE='H' and ELEV_TECH='B' heights) in the SUPERSEDED SURVEY CONTROL section of the datasheet.

Version 8.9.1 update on 09/15/2016

This release implements CM-320, which is an emergency change request to fix the issue in the Gulf Coast dynamic region/subsidence area where datasheets are not being produced. Only the suspect heights were supposed to be suppressed and not the datasheets in V8.9. V8.9.1 corrects this issue.

An example PID in the subsidence area of Louisiana is AH6516. In V8.9 if one went to http://www.ngs.noaa.gov/cgi-bin/ds_pid.prl and put in AH6516 in the PID list, left the remaining defaults on the page, and pressed the [Submit] button, and on the next page if the user pressed the [Select All] button followed by the [Get datasheets] button, the below datasheet would display:

```
The NGS Data Sheet

AH6516
AH6516
AH6516.The horizontal coordinates were established by GPS observations
AH6516.and adjusted by the National Geodetic Survey in June 2012.
AH6516
AH6516.NAD 83(2011) refers to NAD 83 coordinates where the reference frame has
AH6516.been affixed to the stable North American tectonic plate. See
AH6516.NA2011 for more information.
AH6516
AH6516.The horizontal coordinates are valid at the epoch date displayed above
AH6516.which is a decimal equivalence of Year/Month/Day.
AH6516
AH6516 ** This is an automated warning due to this station being located within
AH6516 ** a subsidence area. If an orthometric height is not shown above in the
AH6516 ** CURRENT SURVEY CONTROL section but one appears below under the
AH6516 ** SUPERSEDED SURVEY CONTROL section then the orthometric height(s)
AH6516 ** listed are shown only for historical purposes.
AH6516 ** These heights are unverified, unreliable and have dislocated over time.
AH6516 ** For more information, follow the weblink to "Include suspect heights"
AH6516 ** in subsidence areas on the datasheet retrieval pages.
AH6516
AH6516.The orthometric height was determined by GPS observations and a
AH6516.high-resolution geoid model.
AH6516
AH6516.Significant digits in the geoid height do not necessarily reflect accuracy.
AH6516.GEOID12B height accuracy estimate available here.
AH6516
AH6516.The X, Y, and Z were computed from the position and the ellipsoidal ht.
AH6516
AH6516.The Laplace correction was computed from DEFLEC12B derived deflections.
AH6516
AH6516.The ellipsoidal height was determined by GPS observations
AH6516.and is referenced to NAD 83.
AH6516
AH6516. The following values were computed from the NAD 83(2011) position.

AH6516                          STATION DESCRIPTION
AH6516
AH6516'DESCRIBED BY GULF SOUTH ENGINEERS INCORPORATED 1993 (TWR)
AH6516'MONUMENT IS LOCATED NORTHWEST OF THE CITY OF HOUMA JUST SOUTH OF THE
AH6516'LA. HIGHWAY 20 RIGHT-OF-WAY (TOWNSHIP 16 SOUTH RANGE 15 EAST SECTION
AH6516'11).  MONUMENT IS A TERREBONNE PARISH LIS DISK SET IN CONCRETE 0.2
AH6516'INCHES BELOW THE LEVEL OF THE GROUND. MONUMENT IS ABOUT 1100 FT (335.3
AH6516'M) WEST OF THE INTERSECTION OF BULL RUN ROAD AND LA. HIGHWAY 20, 69.05
AH6516'FT (21.05 M) SOUTH OF A NAIL/SHINER IN THE CENTERLINE OF LA. HIGHWAY
AH6516'20, 40.52 FT (12.35 M) SOUTHEAST OF A NAIL/SHINER IN A LIGHT POLE,
AH6516'41.3 FT (12.6 M) SOUTHWEST OF A FIRE HYDRANT, 18.6 FT (5.7 M) WEST OF
AH6516'THE NORTHWEST CORNER OF A MOTEL ROOM (APARTMENT) AT 1531 HIGHWAY 20.

```

In V8.9.1, if suppressed superseded heights are desired, one needs only to go to http://www.ngs.noaa.gov/cgi-bin/ds_pid.prl, put in AH6516 in the PID list, check the checkbox

for ☑ Include suspect heights in subsidence areas, press the [Submit] button, press the [In understand the risk] button on the pop-up Warning dialog box, and then on the next page press the [Select All] button followed by the [Get datasheets] button. The datasheet below will display with suspect heights in the SUPERSEDED SURVEY CONTROL section of the datasheet:

 AH6516
 AH6516
 AH6516.The horizontal coordinates were established by GPS observations
 AH6516.and adjusted by the National Geodetic Survey in June 2012.
 AH6516
 AH6516.NAD 83(2011) refers to NAD 83 coordinates where the reference frame has
 AH6516.been affixed to the stable North American tectonic plate. See
 AH6516.NA2011 for more information.
 AH6516
 AH6516.The horizontal coordinates are valid at the epoch date displayed above
 AH6516.which is a decimal equivalence of Year/Month/Day.
 AH6516
 AH6516 ** This station is in an area of known vertical motion. If an
 AH6516 ** orthometric height was ever established but is not available
 AH6516 ** in the current survey control section, the orthometric height
 AH6516 ** is considered suspect.  Suspect heights are available in the
 AH6516 ** superseded section only if requested.
 AH6516
 AH6516.The orthometric height was determined by GPS observations and a
 AH6516.high-resolution geoid model.
 AH6516
 AH6516.Significant digits in the geoid height do not necessarily reflect accuracy.
 AH6516.GEOID12B height accuracy estimate available here.
 AH6516

AH6516 ** No published orthometric height exists and therefore all are
AH6516 ** considered suspect. This station did not take part in a recent
AH6516 ** survey which established orthometric heights in the area.  Therefore,
AH6516 ** any previously published orthometric heights have not been validated.
AH6516 ** NGS does not recommend using suspect or superseded heights as control
AH6516 ** unless they can be validated or a new NAVD88 height established.
AH6516 ** If this station were to take part in a new project and submitted
AH6516 ** to NGS a new height could be published.
AH6516
AH6516.NGS no longer adjusts projects to the NAD 27 or NGVD 29 datums.
AH6516.See file dsdata.txt to determine how the superseded data were derived.

```

As part of CM-320, the Alabama dynamic region/subsidence area, which is part of the Gulf Coast dynamic region/subsidence area, was updated. The Gulf Coast dynamic region/subsidence area is an area known or suspected to have subsidence, uplift, or other tectonic vertical motion. In 2005, there was a single dynamic region in the state of LA that was defined with a *latitude/longitude polygon*. In 2007 the LA dynamic region polygon was put aside in favor of defining the dynamic region in the state of LA with a series of *three minimum/maximum latitude/longitude areas*. In 2012 the dynamic region grew to span the lower parts of Gulf Coast states of AL, FL, MS, and LA and was comprised of several *minimum/maximum latitude/longitude areas*. In August, 2016, the dynamic regions in the state of AL were updated. Table 1 shows the Gulf Coast dynamic region/subsidence area before the August, 2016 Alabama update. The line highlighted in red is what is being replaced. Table 2 shows the Gulf Coast dynamic region/subsidence area after it, where the changes to the latitude and longitude ranges are highlighted in green.

Table 1: Dynamic Regions/Subsidence Areas of the Gulf Coast

State	Latitude Range	Longitude Range
LA	latitude ≤ N303432	longitude ≥ W0912738
LA	latitude ≤ N304850	W0903401 ≤ longitude ≤ W0912738
LA	None	longitude ≤ W0903401
MS	latitude ≤ N320608	None
AL	latitude ≤ N312344	longitude ≥ W0880000
FL	latitude ≤ N303716	longitude ≥ W0870744

Table 2: Dynamic Regions/Subsidence Areas of the Gulf Coast

State	Latitude Range	Longitude Range
LA	latitude ≤ N303432	longitude ≥ W0912738
LA	latitude ≤ N304850	W0903401 ≤ longitude ≤ W0912738
LA	None	longitude ≤ W0903401
MS	latitude ≤ N320608	None
AL	latitude ≤ N310028	longitude ≥ W0872300

AL	latitude ≤ N312344	longitude ≥ W0874643
AL	latitude ≤ N314450	longitude ≥ W0880333
AL	latitude ≤ N314752	longitude ≥ W0880800
AL	latitude ≤ N330420	longitude ≥ W0881937
AL	latitude ≤ N320533	longitude ≥ W0882358
FL	latitude ≤ N303716	longitude ≥ W0870744

In a dynamic region/subsidence area, datasheets are publicly publishable for control points in specific projects (a.k.a. adjustment identifiers). If a control point is not part of these specific projects, then a public datasheet also includes the reason that the elevation for this control point should not be used in project (sample output below).

CM-320 also updates the message on American Samoa datasheets from:

```
DE7243.The current NAD 83 position and ellipsoid height are consistent
DE7243.with AMERICAN SAMOA COR ASPA coordinates revised in February 2013
DE7243.to account for displacement due to the September 29, 2009 Samoa
DE7243.Island earthquake.
```

to:

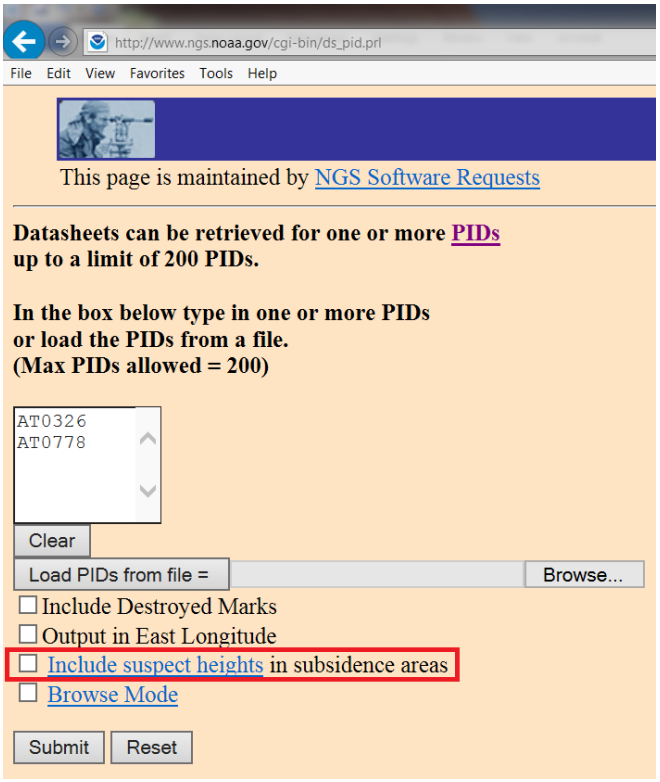
```
DE7243.The current NAD 83 position and ellipsoid height are consistent
DE7243.with AMERICAN SAMOA CORS ASPA coordinates revised in February 2013
DE7243.to account for displacement due to the September 29, 2009 Samoa
DE7243.Island earthquake.
```

Version 8.9 update on 06/02/2016

There are 5 changes that occurred in the datasheet95.w V8.9 release.

Background:

Two marks AT0326 and AT0778 reside in the dynamic region/subsidence area in Louisiana. Whenever the `Include suspect heights in subsidence areas` checkbox is *not* checked on the NGS web page http://www.ngs.noaa.gov/cgi-bin/ds_pid.prl (as shown below),



the following results page showed only AT0326 and not AT0778.

Change #1:

Both PIDs should have been in the get_mark_list.w output (mark listing) shown above. In order to resolve this issue (#1 below) and two additional issues (#2 and #3 below), the best height algorithm, which is common to both the get_mark_list.w program (which produces the initial listing of marks on the datasheet retrieval web pages) and the datasheet95.w program was reviewed by Julie Prusky and Janet Irwin and updated. The best height algorithm update affects primarily control points in the 66 counties encompassed within Gulf Coast Dynamic Region/Subsidence Area.

The best height algorithm was updated for the following 3 issues:

(1) In reviewing datasheet95.w V8.8, it was discovered that the program was not picking up the last 6th part in the 6-part control type (i.e. X-0-0-0-0-0 or X-0-0-0-0-S) that was being passed down to it via the datasheet retrieval web pages or from command line calls of it. The 6th part of the control type means "give/don't give me the suspect heights in the SUPERSEDED SURVEY CONTROL section of its datasheet, not "is/isn't the control type in a subsidence area". These two ideas got coupled in the code and had to be de-coupled in the best height algorithm. The update means that some control points that should have displayed in the get_mark_list.w output (which would allow you to then choose to see its datasheet) are now included. Some sample PIDs with this scenario were

AB4053, AB4052, and AB4051 in Baldwin (003) county Alabama, and AT0778, AT0793, and AT0805 in St. Bernard (087) county Louisiana.

(2) On some datasheets in the subsidence area where the user checked the "Include suspect heights in subsidence area" checkbox, and the best height would have been a SCALED height but is shown as "NOT PUB" on the CURRENT SURVEY CONTROL section's orthometric height line, no SCALED height was shown in the SUPERSEDED SURVEY CONTROL section of the datasheet. Julie Prusky in OAD requested that SCALED orthometric heights be shown in this section if this checkbox was selected. Some sample PIDs where this was an issue include AU2823, AV0853, and BJ4300.

(3) There were some special case scenarios where a small subset of the total marks inside and outside of the subsidence area (99% of the issue was limited to the subsidence area) was retrieving an older orthometric height vs the latest one. Some sample PIDs where this was an issue include EY2387, TW0483, BH0088, BH0104, AI2823, BH1708, and AA8546.

Change #2:

The text on the page that displays the reason codes for why a control point is unpublishable was updated. In datasheet95.w V8.8, the text read:

```

  ------ ----------------------------- ---------- ---------- --------- - - --
```

Change #3:

The datasheet95.w V8.9 program was recompiled to use the libraries that were modified in the get_mark_list.w V2.26 program, as well as the latest libraries that were updated as part of the Solaris to Linux conversion process. This version of datasheet95.w is the first version that runs on Linux.

Other programs affected by this change request include chk_pub.w V3.12, get_mark_list.w V2.26, get_radius_list.w V3.11, lna_ret.w V2.7.2, and sup_marks.w V2.8.2.

Change #4:

In this release of datasheet95.w V8.9, Vasanthi Kammula added two projects to the list of valid projects in the Gulf Coast dynamic region/subsidence area:

(3) 00000857 with epoch 2009.55.
(4) 00000730/5 with epoch 2009.55.

Project 00000857 is valid in the state of Florida. Project 00000730/5 is valid in the states of Alabama and Mississippi.

Below is the list of valid projects for the Gulf Coast Dynamic Region/Subsidence Area (new records are highlighted in green).

Project	Epoch
00000729/1	2009.55
00000729/2	2009.55
00000730/1	2009.55
00000730/2	2009.55
00000730/3	2009.55
00000730/4	2009.55
00000731	2009.55
00000732	2009.55
00000772	2009.55
GPS2329	2006.81
GPS2100	2004.65
GPS2021/C	2004.65
GPS2212	2004.65
GPS2287	2004.65
GPS2307	2004.65
GPS2262	2004.65
GPS2896/B	2009.55
GPS2896/C	2009.55
GPS2995	2009.55
GPS2995/B	2009.55
00000840	2009.55
00000803	2009.55
00000857	2009.55
00000730/5	2009.55

and a list of the valid project/state combinations within the Gulf Coast Dynamic Region/Subsidence Area (new records are highlighted in green).

Subsidence Project	State
00000729/1	AL
00000729/1	FL
00000729/1	LA
00000729/1	MS
00000729/1	TX
00000729/2	AL
00000729/2	MS
00000730/1	AL
00000730/2	AL
00000730/3	AL
00000730/4	AL
00000731	FL
00000732	TX
00000772	MS
GPS2896/B	LA
GPS2896/B	MS
GPS2896/B	AL
GPS2896/C	LA
GPS2896/C	MS
GPS2896/C	AL
GPS2995	LA
GPS2995/B	LA
00000840	MS
00000803	MS
00000857	FL
00000730/5	AL
00000730/5	MS

Change #5:

There is a paragraph change whenever we are in the Gulf Coast Dynamic Region/Subsidence Area but the mark is not in one of the tables outlined in Change #4 above. The paragraph before the change (datasheet95 V8.8) looks like:

```
AJ7791 ** This station is in an area of known vertical motion.  If no
AJ7791 ** orthometric height is shown in the current survey control section,
AJ7791 ** all orthometric heights are considered suspect and are only
AJ7791 ** available in the superseded section if suspect heights were
AJ7791 ** requested.
```

The paragraph after the change (datasheet95 V8.9) looks like:

```
AJ7791 ** This is an automated warning due to this station being located within
AJ7791 ** a subsidence area. If an orthometric height is not shown above in the
AJ7791 ** CURRENT SURVEY CONTROL section but one appears below under the
AJ7791 ** SUPERSEDED SURVEY CONTROL section then the orthometric height(s)
AJ7791 ** listed are shown only for historical purposes.
AJ7791 ** These heights are unverified, unreliable and have dislocated over time.
AJ7791 ** For more information, follow the weblink to "Include suspect heights"
AJ7791 ** in subsidence areas on the datasheet retrieval pages.
```

Version 8.8 update on 09/29/2015

The datasheet95 program was updated to display geoid heights with three significant digits after the decimal place and to include the message:

```
<PID>.Significant digits in the geoid height do not necessarily reflect accuracy.
<PID>.<current geoid model> height accuracy estimate available here.
```

on the datasheet. This message is associated with the latest/current geoid height model. As of this writing, the latest/current geoid height model is GEOID12B.

Version 8.7.1 minor update on 08/3/2015

The datasheet95 program was not updated, however, the underlying libraries shared between datasheet95 and other programs (e.g. chk_pub, get_mark_list, get_radius_list, lna_ret, sup_marks) were updated. This is simply a recompile of the datasheet95 program with the updated/latest C and Fortran libraries.

Version 8.7 update to the Dynamic Regions/Subsidence Areas data (but not the datasheet95 program itself) on 04/13/2015

In order for a project to be publishable on datasheets , a control point must lie outside of the Gulf Coast Dynamic Regions/Subsidence Areas, or if in it, *the elevation must be in a project listed in Tables 2 and 3 or Tables 2 and 4*. The boundaries of this subsidence region in the states of Alabama, Florida, Louisiana, and Mississippi are denoted in Table 1 below.

Table 1: Dynamic Regions/Subsidence Areas of the Gulf Coast

State	Latitude Range	Longitude Range
LA	latitude ≤ N303432	longitude ≥ W0912738
LA	latitude ≤ N304850	W0903401 ≤ longitude ≤ W0912738
LA	latitude ≤ N310002	longitude ≤ W0903401
MS	latitude ≤ N320608	W0882650 ≤ longitude ≤ W0910952
AL	latitude ≤ N312344	longitude ≥ W0880000
FL	N301743 ≤ latitude ≤ N303716	longitude ≥ W0870744

Table 2: Publishable Projects in the Gulf Coast Dynamic Regions/Subsidence Areas (contains both historic and currently publishable projects)

Project	Epoch
00000729/1	2009.55
00000729/2	2009.55
00000730/1	2009.55
00000730/2	2009.55
00000730/3	2009.55
00000730/4	2009.55
00000731	2009.55
00000732	2009.55
00000772	2009.55
GPS2329	2006.81
GPS2100	2004.65
GPS2021/C	2004.65
GPS2212	2004.65
GPS2287	2004.65
GPS2307	2004.65
GPS2262	2004.65
GPS2896/B	2009.55
GPS2896/C	2009.55
GPS2995	2009.55
GPS2995/B	2009.55
00000840	2009.55
00000803	2009.55

New records in this table are highlighted in green.

Table 3: *Currently* Publishable Projects within a State in the Gulf Coast Dynamic Regions/Subsidence Areas

Project	State
00000729/1	AL
00000729/1	FL
00000729/1	LA
00000729/1	MS
00000729/1	TX
00000729/2	AL
00000729/2	MS
00000730/1	AL
00000730/2	AL
00000730/3	AL
00000730/4	AL
00000731	FL
00000732	TX
00000772	MS
00000840	MS
00000803	MS
GPS2896/B	LA
GPS2896/B	MS
GPS2896/B	AL
GPS2896/C	LA
GPS2896/C	MS
GPS2896/C	AL
GPS2995	LA
GPS2995/B	LA

New records in this table are highlighted in green.

In some cases only a handful of control points are publishable within a project in the subsidence region and not the entire project. The PIDs of these control points and their associated state and project are listed in *Table 4* below.

Table 4: Publishable PIDs (control points)
in the Gulf Coast Dynamic Regions/Subsidence Areas

PID	STATE	PROJECT
BG1724	FL	00000025
BH1210	LA	00000729/1
BH1212	LA	GPS2896/C
BH1213	LA	00000729/1
BH3249	MS	00000840
DL9666	MS	00000729/1
DL9667	LA	00000729/1

No change was made to Table 4 above.

Version 8.7 released at 4:12pm on 04/09/2015

This release updates datasheets to work with the new GEOID12B geoid grids and the DEFLEC12B deflection grids. These grids were updated for use in several NGS products to take care of an error in the grids in the state of Puerto Rico (PR). Even though the issue arose in PR, all of the grids for the US/US Territories are affected. The geoid grids updated include eight for CONUS, four for Alaska (AK), one for Hawaii (HI), one for Guam (GU) and the Northern Mariana Islands (CQ), one for Puerto Rico (PR) and the US Virgin Islands (VQ), and one for American Samoa (AS). Below is a list of representative PIDs in each of the grid zones:

```
QC0457 CONUS Grid #1
RV0733 CONUS Grid #2
RL0502 CONUS Grid #3
RF0782 CONUS Grid #4
MT0826 CONUS Grid #5
AI9393 CONUS Grid #6
MA1926 CONUS Grid #7
LY2921 CONUS Grid #8
UV8038 AK Grid #1
UW7465 AK Grid #2
UV7838 AK Grid #3
UV7112 AK Grid #4
TU0026 HI Grid #0
TW0411 GU Grid #0
DE7041 CQ Grid #0
DG5385 PR Grid #0
TV1537 VQ Grid #0
AA4457 AS Grid #0
```

Version 8.6.1 released at 10:26am on 02/14/2015

This datasheet95 release is a special update for two control points associated with the Washington Monument: HV4442 and DL6618. Rather than going through a tedious update of some database codes in the system for the cases needed for these control points that would require weeks to do, and given the short window of time needed to get specific text displayed on datasheets for these control points it was decided that the text needed should be hard coded into the datasheets for these two control points.

For only the two control points (this should not affect ANY other control points) the lines on the datasheet that read:

```
<PID>* NAD 83(2011) ELLIP HT-   149.172 (meters)        (02/01/15)   ADJUSTED
```

and

```
<PID>.The ellipsoidal height was determined by GPS observations
<PID>.and is referenced to NAD 83.
```

Should be changed to:

```
<PID>* NAD 83(2011) ELLIP HT-   149.172 (meters)        (02/01/15)   GPS OBS
```

and

```
<PID>.The ellipsoidal height was determined by classical geodetic methods
```
<PID>.and is referenced to NAD 83.

Version 8.6 released at 4:46pm on 01/22/2015

This release encompasses 3 change requests:

(1) Users/Surveyors have requested information regarding the standard deviations used to calculate the Horiz and Ellip values for network accuracies be put on datasheets and the local and network accuracy reports. Currently, these values are published for local accuracies on the local and network accuracy report (via the lna_ret program) but they have never been published for the network accuracies before and need to be published. Also, the text in the NETWORK section of datasheets needs to be changed to add some new text and data as described in first part of the mockup associated with the change request (see the below links to the original CRs for the mockup). ***The changes to the text on the line with the hyperlink "here" will require that the newweb/ngsweb CGI Perl scripts related to datasheets be updated and released along with this release of datasheet95.***

Textual changes are also needed on the lna_ret report to reflect the changes on the main datasheet page. A new hyperlink is also needed on the lna_ret report for "Geospatial Positioning Accuracy Standards". It will point to http://www.fgdc.gov/standards/projects/FGDC-standards-projects/accuracy/.

Examples PIDs are AC6803, UA0024.

(2) In datasheet95.w, stations designated as H-T (i.e. horizontal trigonometric leveling) should be published in the “Superseded Survey Control” section of datasheets. H-Bs (i.e. horizontal bench marks), and H-G-2s (horizontal HT_MODs), will supersede H-Ts. H-G-0s (i.e. horizontal non height mod) will have the adjustment date check implemented as to which elevation is the latest; this date check is important for the sort order of elevations in the superseded section of datasheets.

The definition of a Horizontal Trigonometric Leveling elevation in the NGSIDB is ELEVATION.ELEV_SOURCE=’H’ and ELEVATION.ELEV_TECH=’T’.

The definition of a Horizontal Benchmark elevation in the NGSIDB is ELEVATION.ELEV_SOURCE=’H’ and ELEVATION.ELEV_TECH=’B’.

The definition of a Horizontal HT_MOD in the NGSIDB is ELEVATION.ELEV_SOURCE=’H’ and ELEVATION.ELEV_TECH=’G’ and GPS_HT_PRECISION.CODE=2.

The definition of a Horizontal Non-HT_MOD in the NGSIDB is ELEVATION.ELEV_SOURCE=’H’ and ELEVATION.ELEV_TECH=’G’ and GPS_HT_PRECISION.CODE=0.

An example PID where H-Ts are not showing up in the superseded section is JO0506. This particular PID’s H-T is in datum NGVD29 (i.e. 29). H-Ts appear in several datums as shown in the below SQL query:

```
select distinct DATUM from ELEVATION where ELEV_SOURCE='H' and
ELEV_TECH='T';
```

DATUM
LT
88
29
G1

Therefore we need to check other example PIDs in each of these datums to show that the H-T superseded issue has been taken care of. These other example PIDs that will be used in the tests are:
EC1892, EC2495, DE1780 for the 88 datum
TT3769, EZ2087, EB1434 for the 29 datum
TU0026, AI9866, AI9864 for the LT datum
TW0465, TW0482, TW0439 for G1 datum

(3) Update the dsdata.txt file associated with datasheets for the text field, HD_HELD1. The old text was:

```
Differentially corrected hand held GPS observations.
```

The new text is:

```
Differentially corrected hand held GPS observations or other comparable
positioning techniques.
```

Version 8.5 released at 5:06pm on 06/12/2014

This release encompasses 9 changes:

(1) CORS are being set up on oil rigs 3 miles off the coast of the US and it is necessary to expand the STATES table to accommodate them to ensure the accuracy of the datasheet. While there are no states in the middle of the ocean, there are US Exclusive Economic Zones (EEZs). State-owned submerged land usually extends 3 nautical miles from the coastline, then the "seabed" becomes the ownership of the US EEZ outward to 200 nautical miles. See:

http://www.gc.noaa.gov/images/gcil_gis_marineboundaries.jpg
http://www.csc.noaa.gov/mbwg/_pdf/products/State.Seaward.Boundary.pdf
http://www.boem.gov/Regulations/BOEM-Governing-Statutes.aspx

Beyond 3 miles, therefore, the state code would be used only to decide which of the three NAD83 transformations to use:

A state code of U1 will be used for US Economic Exclusion Zone U1 for NAD83 2011.
A state code of U2 will be used for US Economic Exclusion Zone U2 for NAD83 MA11.
A state code of U3 will be used for US Economic Exclusion Zone U3 for NAD83 PA11.

The datasheet software should suppress the state and county identifiers beyond 3 miles offshore
printing instead the US Exclusive Economic Zone.

Currently there are 2 control points in the U1 EEZ: AJ8053 (ARP for CORS site COVX) and DE6582 (ARP for CORS site HARV). The L1 Phase Centers associated with COVX are DN4596 and AJ8054 (which is no longer published since it was replaced with the new L1 Phase Center of DN4596). The L1 Phase Center and Reference Monument associated with HARV are DE6581 and DE6582. There are no control points currently for the U2 EEZ or U3 EEZ in the NGSIDB.

As per the CORS team, the SPC data should display on the datasheet but the UTM data should not for any control point in an EEZ. As per a conversation on 11/13/2013, datasheets where the CORS type is ARP, L1 Phase Center, or Offset Monument and also have a best position where the position source is adjusted should display SPC and UTM data on them.

(2) In datasheet V8.3, it was requested that the STATE/COUNTY and COUNTRY lines be modified as follows: *Add the name of the COUNTRY and STATE/PROVINCE in addition to the GNIS code to NGS data sheets for CANADA and other Countries. The names of the States/provinces already exist in the NGSIDB. For Countries that do not have State identifiers, just the Country GNIS code and Country Name should be printed and if the Country has an "Unidentified Province/State" code in the STATES table, print that state code and the name associated with it.*

Later on there was an email addendum to this original request and it appeared that the request was changed to:

Make sure the STATE/COUNTY and COUNTRY lines on the datasheet for all countries outside of the US come out in the following format:

```
STATE/COUNTY- <state_name>
COUNTRY     - <country_name>
```

versus

```
STATE/COUNTY- <state_code>/<county_name>
COUNTRY     - <country_code>
```

Two PIDs where this issue still persisted were: AB9540 (in Aruba) and AB9264 (in Curacao).

(3) There was an earthquake in American Samoa in Nov of 2009 which affected positions and heights by as much as a decimeter. As a new position has become available for the CORS on the island which controls all the GPS mark positions, a new readjustment to PA2011 for the island has been done and entered in the database. All mark positions are now consistent with the newly published CORS position and it is recommended that a note be added to all data sheets of American Samoa GPS points and the CORS data sheet for ASPA. In this request:

(a) If a datasheet is requested for the CORS ARP of AJ5871 *(UID is 11573406)* then display the message:

```
<PID>.The current NAD 83 position and ellipsoid height were revised in
<PID>.February 2013 to account for displacement due to the September 29,
<PID>.2009 Samoa Island earthquake.
```

This message should also display whenever a datasheet is requested for DK7460, the ARPs *associated publishable* L1 Phase Center. If this antenna gets replaced at a later date, then the new L1 Phase Center should display the message above. To find out what the *associated publishable* L1 Phase Center is for a CORS ARP, simply run the following SQL:

Find the CORS_NAME associated with the ARP.

```
1> select * from CORS_GROUP where UID=11573406 (this is the ARPs
UID)
2> go

 UID         CORS_NAME CORS_TYPE
 ----------- --------- ---------
    11573406 ASPA      A
```

Get all of the components of the CORS (ARP, L1 Phase Centers, Monuments, Reference Marks).

```
1> select * from CORS_GROUP where CORS_NAME="ASPA"
2> go
 UID         CORS_NAME CORS_TYPE
 ----------- --------- ---------
```

```
11459204 ASPA      R (This is a reference mark)
11573406 ASPA      A (This is an ARP)
11573407 ASPA      L (This is an L1 Phase Center)
11580421 ASPA      R (This is a reference mark)
11624397 ASPA      L (This is an L1 Phase Center)
```

Note: a monument would be designated with a CORS_TYPE of M in the table above.

See which one of the L1 Phase Centers is the active/publishable one.

```
1> select * from CORS_PUB_STATUS where LPC_UID in (11573407,
11624397)
2> go

 LPC_UID     PUB
 ----------- ---
    11573407 N
    11624397 Y (Y means Yes it is publishable)
```

The PID for UID=11573407 is AJ5872 (the former antenna that is now defunct/decommissioned but that NGS still tracks in the database) and the PID for UID=11624397 is DK7460 (the active/current and publishable antenna).

(b) For all other datasheets in American Samoa that are GPSed, the message:

```
<PID>.The current NAD 83 position and ellipsoid height are consistent
<PID>.with AMERICAN SAMOA COR ASPA coordinates revised in February 2013
<PID>.to account for displacement due to the September 29, 2009 Samoa
<PID>.Island earthquake.
<PID>.The PID for the ASPA CORS ARP is AJ5871.
<PID>.The PID for the ASPA L1 Phase Center is DK7460.
```

should be displayed. This applies to datasheets for passive control points that are GPSed as well as other CORS sites (all are GPSed) in American Samoa. This message should be attached to all GPS stations (current and future) in American Samoa.

(4) The datasheet95 program displays the message:

```
* POSTED <v_rate>, SEE BELOW
```

if the ELEVATION.ELEV_SOURCE is "P" (for Posted) along with one of 8 possible messages which are based on this field as well as what the ELEVATION.ERR_DIST (a.k.a. vrate, a calculated field) and ELEVATION.REDUNDANCY fields contain.

Message #	vrate	Redundancy	Message	Sample PID
1	Between 0.0 and 1.0 mm/km	N/A	<PID>.* This is a POSTED BENCH MARK height. Code A indicates a distribution <PID>.rate of 0.0 thru 1.0 mm/km. <PID>	DG6930
2	Between 1.1 and 2.0 mm/km	N/A	<PID>.* This is a POSTED BENCH MARK height. Code B indicates a distribution <PID>.rate of 1.1 thru 2.0 mm/km. <PID>	EW2570
3	Between 2.1 and 3.0 mm/km	N/A	<PID>.* This is a POSTED BENCH MARK height. Code C indicates a distribution <PID>.rate of 2.1 thru 3.0 mm/km. <PID>	OA0360
4	Between 3.1 and 4.0 mm/km	N/A	<PID>.* This is a POSTED BENCH MARK height. Code D indicates a distribution <PID>.rate of 3.1 thru 4.0 mm/km. <PID>	CE0075
5	Between 4.1 and 8.0 mm/km	N/A	<PID>.* This is a POSTED BENCH MARK height. Code E indicates a distribution <PID>.rate of 4.1 thru 8.0 mm/km. <PID>	JA1023
6	Greater than 8.0 mm/km	N/A	<PID>.* This is a POSTED BENCH MARK height. Code F indicates a distribution <PID>.rate greater than 8.0 mm/km. <PID>	BC0899
7	NC	C	<PID>.* This is a POSTED BENCH MARK height. Code NC indicates the bench mark <PID>.was located on a no-check spur therefore a value was not computed. <PID> <PID>.No vertical observational check was made to the station.	OD0336
8	NC	N	<PID>.* This is a POSTED BENCH MARK height. Code NC indicates the bench mark <PID>.was located on a no-check spur therefore a value was not computed. <PID> <PID>.No vertical observational check was made to the station.	DV0931

The datasheet95 program also displays the message:

```
* READJUSTED, <vrate>, SEE BELOW
```

if the ELEVATION.ELEV_SOURCE is "M" (for Readjusted)) 8 possible messages which are based on this field as well as what the ELEVATION.ERR_DIST (a.k.a. vrate, a calculated field) and ELEVATION.REDUNDANCY fields contain.

Message #	vrate	Redundancy	Message	Sample PID
1	Between 0.0 and 1.0 mm/km	N/A	<PID>.* This is a READJUSTED BENCH MARK height. Code A indicates a distribution <PID>.rate of 0.0 thru 1.0 mm/km. <PID>	EW5132
2	Between 1.1 and 2.0 mm/km	N/A	<PID>.* This is a READJUSTED BENCH MARK height. Code B indicates a distribution <PID>.rate of 1.1 thru 2.0 mm/km. <PID>	EW2571
3	Between 2.1 and 3.0 mm/km	N/A	<PID>.* This is a READJUSTED BENCH MARK height. Code C indicates a distribution <PID>.rate of 2.1 thru 3.0 mm/km. <PID>	EW2599
4	Between 3.1 and 4.0 mm/km	N/A	<PID>.* This is a READJUSTED BENCH MARK height. Code D indicates a distribution <PID>.rate of 3.1 thru 4.0 mm/km. <PID>	DW1191
5	Between 4.1 and 8.0 mm/km	N/A	<PID>.* This is a READJUSTED BENCH MARK height. Code E indicates a distribution <PID>.rate of 4.1 thru 8.0 mm/km. <PID>	DW1231
6	Greater than 8.0 mm/km	N/A	<PID>.* This is a READJUSTED BENCH MARK height. Code F indicates a distribution <PID>.rate greater than 8.0 mm/km. <PID>	EV2077
7	NC	C	<PID>.* This is a READJUSTED BENCH MARK height. Code NC indicates the bench mark <PID>.was located on a no-check spur therefore a value was not computed. <PID> <PID>.No vertical observational check was made to the station.	DC0795
8	NC	N	<PID>.* This is a READJUSTED BENCH MARK height. Code NC indicates the bench mark <PID>.was located on a no-check spur therefore a value was not computed. <PID> <PID>.No vertical observational check was made to the station.	ER0053

The messages above should be modified to eliminate the sections highlighted in red since the vrate will no longer be calculated and inserted into the ELEVATION table's ERR_DIST field via the ld_vhts5 program. Ajit Singh stated that the vrate field data is ‘inadmissible’.

Also as part of (4) above, the dsdata.txt file was updated. Please see the test document for more specifics as to how it changed.

(5) Make sure that that the positions with historical horizontal datums appear as the last set of positions in the SUPERSEDED SURVEY CONTROL section . For PID HV7698, the superseded position with USBS is appearing at the top of the list and needs to be grouped with the USSD superseded position at the bottom of the list.

In earlier versions of datasheet it appears incorrectly as follows:

```
HV7698                          SUPERSEDED SURVEY CONTROL
HV7698
HV7698  USBS         -  38 53 25.60000(N)    076 59 40.98000(W) AD(       ) 3
HV7698  NAD 83(1991)-  38 53 29.02790(N)    076 59 58.62066(W) AD(       ) 1
HV7698  NAD 83(1986)-  38 53 29.02710(N)    076 59 58.63166(W) AD(       ) 1
HV7698  NAD 27       -  38 53 28.63000(N)    076 59 59.70000(W) AD(       ) 1
HV7698  USSD         -  38 53 28.96100(N)    076 59 59.54300(W) AD(       ) 3
```

The fix should in datasheet95 V8.5 should look like:

```
HV7698                          SUPERSEDED SURVEY CONTROL
HV7698
HV7698  NAD 83(1991)-  38 53 29.02790(N)    076 59 58.62066(W) AD(       )
HV7698  NAD 83(1986)-  38 53 29.02710(N)    076 59 58.63166(W) AD(       ) 1
HV7698  NAD 27       -  38 53 28.63000(N)    076 59 59.70000(W) AD(       ) 1
HV7698  USBS         -  38 53 25.60000(N)    076 59 40.98000(W) AD(       ) 3
HV7698  USSD         -  38 53 28.96100(N)    076 59 59.54300(W) AD(       ) 3
```

6. Make sure that all superseded control is included on CORS datasheets. An example of this is PID AF9520.

7. Remove excess spacing on the “Orthometric Height” line on datasheets where the word “ (meters)” has too much leading space in it. Note: This was not a typo. During the time that we were updating the dynamic regions/subsidence areas in the Southern US, it was requested that we have 3 options for this “word”. The options are:

a. "**(meters)" - two leading star characters; comes out whenever we are in the subsidence area and the mark is not publishable within this area. No change is needed on this option. An example PID where this displays on the datasheet is AU1176.

```
AU1176* NAVD 88 ORTHO HEIGHT -          **(meters)           **(feet) NOT PUB
```

b. " (+/-2cm)" - two leading blanks; displays if the mark is VERTCONed. We need to remove one of the leading blanks so we get “ (+/-2cm)”. An example PID where the extra blank occurs is TO1170. The issue also presents itself in the word “ (feet)”.

```
TO1170* NAVD 88 ORTHO HEIGHT -  750.03   (+/-2cm)     2460.7  (feet)  VERTCON
```

c. " (meters)" - two leading blanks; displays whenever we are either outside of the subsidence area or the mark is publishable within the subsidence area. We need to remove one of the leading blanks – so we get “ (meters)”. An example PID where the extra blank occurs is BG2082.

```
BG2082* NAVD 88 ORTHO HEIGHT -  2.352    (meters)        7.72 (feet)  ADJUSTED
```

8. Make sure that:
   (a) The Leveled BM (i.e. ELEVATION.ELEV_SOURCE='H' and ELEVATION.ELEV_SOURCE='B') for BJ4658 does not appear twice on the datasheet – once in the CURRENT SURVEY CONTROL section and once in the SUPERSEDED SURVEY CONTROL section. An H-T (i.e. ELEVATION.ELEV_SOURCE='H' and ELEVATION.ELEV_TECH='T') is not printable at this time in the SUPERSEDED SURVEY CONTROL section due to a rule initiated in a prior version of datasheet95. The adjusted height for RM0895 is in the CURRENT SURVEY CONTROL section and not the SUPERSEDED SURVEY CONTROL section. Currently the GPS_OBS (ELEVATION.ELEV_SOURCE='H' and ELEVATION.ELEV_TECH='G') is winning as the best height instead of the adjusted height (ELEVATION.ELEV_SOURCE='A') for RM0895.

Notes: In order to make the necessary changes in #8a above, there is a subsequent change that must occur in the superseded section (or else fixing #8a would not be doable). The resulting changes are as follows:

Control points that have superseded heights where the datum is in (29, AS, G1, GU, LT, NM, PR) and their ELEV_SOURCE/ELEV_TECH combinations are A/N, H/B, H/G will have ***all of these matching superseded heights display in the SUPERSEDED SURVEY CONTROL section of datasheets***. Example PIDs are AA0028, AA0134, AC1045, AD2617, ED0346, MB1088, DE5505, DE5588,TU0236, TU0222, TU0029, TU0224, TU0284, TU0187, TU0181, TU0208, TU0291, TU0292, TU0185, TU0179, TU0231, TU0233, TU0288. Please see the notes in the test document https://source.ngs.noaa.gov/svn/repos/NGSIDBAPI/RetrievalApi/datasheet/docs/V8.5/DATASHEET95_V8_5_Tests.docx after test 8b for more information.

9. Update the dynamic region projects and the dynamic region project state combos.

The dynamic region projects now will contain the following list of publishable projects in the Gulf Coast Dynamic Regions/Subsidence Areas:

Project	Epoch
00000729/1	2009.55
00000729/2	2009.55
00000730/1	2009.55
00000730/2	2009.55
00000730/3	2009.55
00000730/4	2009.55
00000731	2009.55
00000732	2009.55
00000772	2009.55
GPS2329	2006.81
GPS2100	2004.65
GPS2021/C	2004.65
GPS2212	2004.65
GPS2287	2004.65
GPS2307	2004.65
GPS2262	2004.65
GPS2896/B	2009.55
GPS2896/C	2009.55
GPS2995	2009.55
GPS2995/B	2009.55

New records in this file are highlighted in green.

The dynamic region project state combos now will contain the following listing of valid project/state combinations in the Gulf Coast Dynamic Regions/Subsidence Areas:

Project	State
00000729/1	AL
00000729/1	FL
00000729/1	LA
00000729/1	MS
00000729/1	TX
00000729/2	AL
00000729/2	MS
00000730/1	AL
00000730/2	AL
00000730/3	AL
00000730/4	AL
00000731	FL
00000732	TX
00000772	MS
GPS2896/B	LA
GPS2896/B	MS
GPS2896/B	AL
GPS2896/C	LA
GPS2896/C	MS
GPS2896/C	AL
GPS2995	LA
GPS2995/B	LA

New records in this file are highlighted in green.

Version 8.4 released at 11:43am on 05/08/2014

This release encompasses 2 change requests and 3 additional issues:

1. Fix the datasheets that have two different scenarios:
   - Where a limited number of datasheets are not being VERTCONed when they should be. An example PID for this issue is TO1170.
   - Where the Reference Marks and the Primary Azimuth are jumbled up on some datasheets. An example PID for this issue is GW0408.

   The problems stem from the difference in how Oracle sorts the database tables vs how Sybase sorts them, and also in how Oracle retrieves data with inner and outer joins differently that in Sybase.

   The partial datasheet for TO1170 BEFORE it was corrected is shown below.

```
1        National Geodetic Survey,   Retrieval Date = SEPTEMBER 30, 2013
 TO1170 ***********************************************************************
 TO1170  CBN         -  This is a Cooperative Base Network Control Station.
 TO1170  DESIGNATION -  LOON LAKE
 TO1170  PID         -  TO1170
 TO1170  STATE/COUNTY-  WA/STEVENS
 TO1170  COUNTRY     -  US
 TO1170  USGS QUAD   -  SPRINGDALE (1980)
 TO1170

2. Remove any recovery from the datasheet with a project source of GPS1909 or 1909. This issue was a bit more complex than originally conceived. The email transactions between OAD and SDD found here https://source.ngs.noaa.gov/svn/repos/NGSIDBAPI/RetrievalApi/datasheet/docs/V8.4/CR-DS 1909 recoveries addendum.doc and here https://source.ngs.noaa.gov/svn/repos/NGSIDBAPI/RetrievalApi/datasheet/docs/V8.4/CR-DS 1909 recoveries addendum2.doc clarify the issues and solution.

   Oracle and Sybase sort records in some of the tables in NGSIDB differently than expected. This caused HISTORY records with null (i.e. signified by "UNK" on the datasheet in the HISTORY section) to fall at the end of the sorted list. This is not what is desired. There are two scenarios possible in dealing with "UNK" records:

   Scenario #1: if the HISTORY.REPORT_DATE is null and the HISTORY.COND is null and there is descriptive text in the TEXT table for the HISTORY.REPORT_ID, then include this history record in the list of histories to be printed out on the datasheet, along with its associated descriptive text. In this case, if any "UNK" records should be placed in the HISTORY section immediately after the MONUMENTED/original setting (i.e. HISTORY.COND='S') and before any HISTORY records with HISTORY.COND in (G, N, O, P, X, Y, Z). ***An example of this is PID MG0369.***

   The HISTORY records for MG0369 (i.e. UID=10441067) are:

REPORT_DATE	REPORT_ID	LOAD_ID	UID	COND	AGENCY	COP	SAT_USE	TRANSPOR	PACK_TIME	REPORT_TYPE	T_STATUS
	949212	0	10441067		RIRR					V	C
	949213	0	10441067	S	USE					S	I
19960611	2508231	7441	10441067	N	USPSQD					I	N
19960819	2507694	7426	10441067	G	USPSQD					I	D

   The one in red is a record where the REPORT_DATE is null and the COND is null. It has descriptive text in the TEXT table whenever the query below is run:

   select * from TEXT where REPORT_ID=949212;

REPORT_ID	SEQ_NO	LINE
949212	1	AT ROCK ISLAND.

```
949212  2       AT ROCK ISLAND, ROCK ISLAND COUNTY, ON THE CHICAGO, ROCK ISLAND
949212  3       AND PACIFIC RAILWAY, OPPOSITE THE STATION, IN THE NORTH SIDE OF
949212  4       THE BUILDING OCCUPIED IN 1944 BY BEST RECAP AND TIRE CO., AT THE
949212  5       NORTHEAST CORNER OF THE FOUNDATION, AND IN THE UPPER FOUNDATION
949212  6       STONE.  THE CENTER OF A COPPER BOLT SET HORIZONTALLY AND SURROUNDED
949212  7       BY THE LETTERS USPBM CUT IN THE STONE.
```

Thus, this history record in red *should* appear on the datasheet and the descriptive text should appear on the datasheet and below the MONUMENTED (i.e HISTORY.COND='S') history record.

The partial datasheet for MG0369 BEFORE it was corrected is shown below.

```
MG0369  HISTORY     - Date     Condition        Report By

MG0369'RECOVERED IN GOOD CONDITION.
```

Scenario #2: If the HISTORY.REPORT_DATE is null and the HISTORY.COND is null and there is no descriptive text in the TEXT table for the HISTORY.REPORT_ID, then exclude this history record in the list of histories from the datasheet and also exclude the descriptive text associated with it from the datasheet as well. ***An example of this is PID HV0450*.**

The HISTORY records for HV0450 (i.e. UID=10154135) are:

REPORT _DATE	UID	REPORT _ID	LOAD_ID	COND	AGENCY	COP	SAT _USE	TRANSPOR	PACK _TIME	REPORT _TYPE	T_STATUS
	10154135	2978181	271961		GEOCAC					N	N
1971	10154135	339276	0	S	NGS					V	C
20010215	10154135	2708749	109945	G	MDSHA	SFK	N	C	00	N	C
20060225	10154135	2779552	160707	G	USPSQD	NLH	Y			W	I
20070225	10154135	2816753	188009	G	USPSQD	NH	Y			W	N

The one in red is a record where the REPORT_DATE is null and the COND is null. It has no descriptive text in the TEXT table whenever the query below is run:

select * from TEXT where REPORT_ID=2978181;

Thus, this history record in *red* should not appear on the datasheet and no default descriptive text should be generated/appear on the datasheet either.

The partial datasheet for HV0450 BEFORE it was corrected is shown below.

```

3. It was discovered that the following PIDs best elevation in the CURRENT SURVEY CONTROL and/or their superseded elevations in the SUPERSEDED SURVEY CONTROL section of their datasheets was incorrect (the best elevation was not being chosen properly and this was also affecting the listing of superseded elevations too): TU1650, AA6240, DE5506, DM7511, AJ8468, and AE8289. Make sure that their best elevation is being shown in the CURRENT SURVEY CONTROL SECTION and that their superseded elevations are showing in the SUPERSEDED SURVEY CONTROL section as well.

   *Note: The elevations for each mark were extracted from the Oracle database and **the best elevation is highlighted in green below**. The elevations that should appear in the SUPERSEDED SURVEY CONTROL section of datasheets are highlighted in purple below.*

PID	ADJ_ID	ADJ_DATE	DATUM	ELEV_AVAIL	ELEV_SOURCE	ELEV_TECH	HEIGHT	NUID	OBS_DATE

 TU1650
 TU1650
 TU1650.The horizontal coordinates were established by GPS observations
 TU1650.and adjusted by the National Geodetic Survey in June 2012.
```

```
TU1650
TU1650.NAD 83(PA11) refers to NAD 83 coordinates where the reference
TU1650.frame has been affixed to the stable Pacific tectonic plate.
TU1650
TU1650.The horizontal coordinates are valid at the epoch date displayed above
TU1650.which is a decimal equivalence of Year/Month/Day.
TU1650
TU1650.The orthometric height was determined by GPS observations and a
TU1650.high-resolution geoid model using precise GPS observation and
TU1650.processing techniques.
TU1650
TU1650.The X, Y, and Z were computed from the position and the ellipsoidal ht.
TU1650
TU1650.The Laplace correction was computed from DEFLEC12A derived deflections.
TU1650
TU1650.The ellipsoidal height was determined by GPS observations
TU1650.and is referenced to NAD 83.
TU1650
TU1650. The following values were computed from the NAD 83(PA11) position.
TU1650
TU1650;                    North         East     Units Scale Factor Converg.

TU1650                          STATION DESCRIPTION
TU1650
TU1650'DESCRIBED BY COAST AND GEODETIC SURVEY 1969 (CAA)
TU1650'THE STATION IS LOCATED IN THE TOWN OF EWA BEACH, ABOUT 0.3 MILE
TU1650'SOUTH OF THE CENTER OF TOWN, IN THE SOUTH CORNER OF POHAKEA
TU1650'SCHOOL GROUNDS.
TU1650'
TU1650'TO REACH FROM THE JUNCTION OF PAPIPI ROAD AND FORT WEAVER ROAD
TU1650'(STATE HIGHWAY 76) IN EWA BEACH, GO SOUTH ON FORT WEAVER ROAD FOR
TU1650'0.35 MILE TO A CROSSROAD OF NORTH ROAD AND FORT WEAVER ROAD, TURN
TU1650'LEFT, NORTHERLY, ON NORTH ROAD FOR APPROXIMATELY 75 FEET TO THE
TU1650'STATION ON THE LEFT.  CONTINUE NORTHERLY ON NORTH ROAD FOR 0.35
TU1650'MILE TO THE AZIMUTH MARK ON THE RIGHT.
TU1650'
TU1650'STATION MARK IS A STANDARD DISK STAMPED EWA BEACH 1969 SET IN
TU1650'THE TOP OF A ROUND CONCRETE MONUMENT WHICH IS FLUSH WITH THE
TU1650'SURFACE OF THE GROUND.  THE UNDERGROUND MARK IS CEMENTED IN A DRILL
TU1650'HOLE IN BEDROCK AND IS 2 FEET BELOW THE STATION MARK, IT IS 78
TU1650'FEET NORTHEAST OF THE CENTER OF STATE HIGHWAY 76, 49.4 FEET
TU1650'NORTHWEST OF A POWERLINE POLE, 74 FEET NORTHWEST OF THE CENTER
TU1650'OF NORTH ROAD.
TU1650'
TU1650'REFERENCE MARK 1, A STANDARD DISK STAMPED EWA BEACH NO 1 1969 SET
TU1650'IN A DRILL HOLE IN BEDROCK FLUSH WITH THE SURFACE OF THE GROUND
TU1650'AND ABOUT THE SAME ELEVATION AS THE STATION.  IT IS 52.4 FEET
TU1650'NORTHWEST OF THE CENTER OF NORTH ROAD, 33 FEET NORTH-NORTHEAST OF
TU1650'THE CENTER OF STATE HIGHWAY 76, AND 14 FEET EAST OF A POWERLINE
TU1650'POLE.
TU1650'
TU1650'REFERENCE MARK 2, A STANDARD DISK STAMPED EWA BEACH NO 2 1969,
TU1650'SET IN DRILL HOLE IN BEDROCK FLUSH WITH THE SURFACE OF THE GROUND
TU1650'AND ABOUT THE SAME ELEVATION AS THE STATION.  IT IS 124.8 FEET
TU1650'WEST OF THE CENTER OF NORTH ROAD, 72.4 FEET NORTHWEST OF A
TU1650'POWERLINE POLE, 48 FEET NORTH-NORTHWEST OF THE CENTER OF STATE
TU1650'HIGHWAY 76.
TU1650'
TU1650'AZIMUTH MARK, A STANDARD DISK STAMPED EWA BEACH 1969, SET IN A
TU1650'DRILL HOLE IN BEDROCK WHICH IS FLUSH WITH THE SURFACE OF THE
TU1650'GROUND.  IT IS 27 FEET SOUTHEAST OF THE CENTER OF NORTH ROAD, 21
TU1650'FEET SOUTHWEST OF THE CENTER OF GRAVE ROAD AND 19 FEET NORTHWEST
TU1650'OF A CYCLONE FENCE AROUND CANAL.
TU1650'
TU1650'HEIGHT OF LIGHT ABOVE STATION MARK 25.4 METERS.
TU1650
TU1650                          STATION RECOVERY (2004)
TU1650
TU1650'RECOVERY NOTE BY HAWAII DEPARTMENT OF TRANSPORTATION 2004 (CBG)
TU1650'RECOVERED BY STATE OF HAWAII DEPARTMENT OF TRANSPORTATION 2004 (CBG)
TU1650'TO REACH STATION ADEQUATE  DISK IS LOCATED 1.0 FT (0.3 M) BELOW
TU1650'GROUND, 2.85 FT (0.9 M) EAST FROM CHANIKINK FENCE, 70 FT (21.3 M) WEST
TU1650'OF MONKEY POD TREE, 33 FT (10.1 M) NORTHWEST OF 1.4 FT (0.4 M) HIGH
TU1650'WATER VALVE, 7 FT (2.1 M) SOUTHEAST OF A WATER VALVE ON A CONCRETE
TU1650'SIDEWALK.

 DE5506
 DE5506
 DE5506.The horizontal coordinates were established by GPS observations
 DE5506.and adjusted by the National Geodetic Survey in June 2012.
```

```
DE5506
DE5506.NAD 83(2011) refers to NAD 83 coordinates where the reference
DE5506.frame has been affixed to the stable North American tectonic plate. See
DE5506.www.ngs.noaa.gov/web/surveys/NA2011 for more information.
DE5506
DE5506.The horizontal coordinates are valid at the epoch date displayed above
DE5506.which is a decimal equivalence of Year/Month/Day.
DE5506
DE5506.The orthometric height was determined by differential leveling and
DE5506.adjusted by the NATIONAL GEODETIC SURVEY
DE5506.in April 2003.
DE5506
DE5506.No vertical observational check was made to the station.
DE5506
DE5506.Photographs are available for this station.
DE5506
DE5506.The X, Y, and Z were computed from the position and the ellipsoidal ht.
DE5506
DE5506.The Laplace correction was computed from DEFLEC12A derived deflections.
DE5506
DE5506.The ellipsoidal height was determined by GPS observations
DE5506.and is referenced to NAD 83.
DE5506
DE5506. The following values were computed from the NAD 83(2011) position.
DE5506
DE5506;                    North         East     Units Scale Factor Converg.

AE8289
AE8289
AE8289.The horizontal coordinates were established by GPS observations
AE8289.and adjusted by the National Geodetic Survey in June 2012.
AE8289
AE8289.NAD 83(2011) refers to NAD 83 coordinates where the reference
AE8289.frame has been affixed to the stable North American tectonic plate. See
AE8289.www.ngs.noaa.gov/web/surveys/NA2011 for more information.
AE8289
AE8289.The horizontal coordinates are valid at the epoch date displayed above
AE8289.which is a decimal equivalence of Year/Month/Day.
AE8289
AE8289.The orthometric height was determined by differential leveling and
AE8289.adjusted by the NATIONAL GEODETIC SURVEY
AE8289.in July 1999.
AE8289
AE8289.No vertical observational check was made to the station.
AE8289
AE8289.This Water Level Mark is designated as VM 13392
AE8289.by the CENTER FOR OPERATIONAL OCEANOGRAPHIC PRODUCTS AND SERVICES.
AE8289
AE8289.Photographs are available for this station.
AE8289
AE8289.The X, Y, and Z were computed from the position and the ellipsoidal ht.
AE8289
AE8289.The Laplace correction was computed from DEFLEC12A derived deflections.
AE8289
AE8289.The ellipsoidal height was determined by GPS observations
AE8289.and is referenced to NAD 83.
AE8289
AE8289.The dynamic height is computed by dividing the NAVD 88
AE8289.geopotential number by the normal gravity value computed on the
AE8289.Geodetic Reference System of 1980 (GRS 80) ellipsoid at 45
AE8289.degrees latitude (g = 980.6199 gals.).
AE8289
AE8289.The modeled gravity was interpolated from observed gravity values.
AE8289

```

4. Make sure that mark AH5645 displays the proper best elevation in the CURRENT SURVEY CONTROL section of the datasheet and that the superseded elevations are properly displayed in the SUPERSEDED SURVEY CONTROL section of the datasheet. AH5445 currently displays a superseded elevation as the best elevation and should display an N-Height as the best elevation.

   This issue occurred for this PID and others because the best height algorithm expected the best height to be an adjusted elevation, a HT_MOD, or a leveled benchmark. Elevations where this issue occurs will have an ELEV_SOURCE of ‘B’, ‘C’, ‘M’, ‘N’, ‘P’, ‘R’, or ‘U’. The definitions of these ELEV_SOURCE codes is below.

```
‘B’ - UNCHECKED ADJUSTED
‘C’ - COMPUTED USING UNCORRECTED HEIGHT DIFFERENCES,
‘M’ - OLDER OBS APPLIED TO ADJUSTED HEIGHT GENERATED FROM A MORE RECENT SURVEY
‘N’ - HEIGHT FROM PRECISE LEVELING CONNECTED AT ONLY ONE NSRS PT-FOR GPS CHECK
‘P’ - POSTED BENCH MARK
‘R’ - RESET COMPUTATION,
‘U’ - UNVALIDATED HEIGHT FROM PRECISE LEVELING CONNECTED AT ONLY ONE NSRS PT
```

   This issue has been corrected in the best height algorithm. Other PIDs where this situation occurred were AW6997, ER0673, ED2385, AH5645, DC2131, NP0165, JA0699, LA0533, GU3417, and DH6678.

   The partial datasheet for AH5645 BEFORE it was corrected is shown below.

AH5645
AH5645
AH5645.This mark is at Shelby Airport (EHO)
AH5645
AH5645.The horizontal coordinates were established by GPS observations
AH5645.and adjusted by the National Geodetic Survey in June 2012.
AH5645
AH5645.NAD 83(2011) refers to NAD 83 coordinates where the reference
AH5645.frame has been affixed to the stable North American tectonic plate. See
AH5645.www.ngs.noaa.gov/web/surveys/NA2011 for more information.
AH5645
AH5645.The horizontal coordinates are valid at the epoch date displayed above
AH5645.which is a decimal equivalence of Year/Month/Day.
AH5645
AH5645.GPS derived orthometric heights for airport stations designated as
AH5645.PACS or SACS are published to 2 decimal places.  This maintains
AH5645.centimeter relative accuracy between the PACS and SACS.  It does
AH5645.not indicate centimeter accuracy relative to other marks which are
AH5645.part of the NAVD 88 network.
AH5645
AH5645.The X, Y, and Z were computed from the position and the ellipsoidal ht.
AH5645
AH5645.The Laplace correction was computed from DEFLEC12A derived deflections.
AH5645
AH5645.The ellipsoidal height was determined by GPS observations
AH5645.and is referenced to NAD 83.
AH5645
AH5645. The following values were computed from the NAD 83(2011) position.
AH5645

AH5645  values and other accuracy information.
AH5645
AH5645
AH5645.This mark is at Shelby Airport (EHO)
AH5645
AH5645.The horizontal coordinates were established by GPS observations
AH5645.and adjusted by the National Geodetic Survey in June 2012.
AH5645
AH5645.NAD 83(2011) refers to NAD 83 coordinates where the reference
AH5645.frame has been affixed to the stable North American tectonic plate. See
AH5645.www.ngs.noaa.gov/web/surveys/NA2011 for more information.
AH5645
AH5645.The horizontal coordinates are valid at the epoch date displayed above
AH5645.which is a decimal equivalence of Year/Month/Day.
AH5645
AH5645.The orthometric height was determined by differential leveling
AH5645.and adjusted by the NATIONAL GEODETIC SURVEY in July 1999.
AH5645
AH5645.The height was determined by precise leveling from only one NSRS
AH5645.bench mark.  This was not adequate "tie leveling" to NSRS and was
AH5645.allowed ONLY to validate the GPS-derived height.
AH5645
AH5645.The X, Y, and Z were computed from the position and the ellipsoidal ht.
AH5645
AH5645.The Laplace correction was computed from DEFLEC12A derived deflections.
AH5645
AH5645.The ellipsoidal height was determined by GPS observations
AH5645.and is referenced to NAD 83.
AH5645
AH5645.The dynamic height is computed by dividing the NAVD 88
AH5645.geopotential number by the normal gravity value computed on the
AH5645.Geodetic Reference System of 1980 (GRS 80) ellipsoid at 45
AH5645.degrees latitude (g = 980.6199 gals.).
AH5645
AH5645.The modeled gravity was interpolated from observed gravity values.
AH5645
AH5645. The following values were computed from the NAD 83(2011) position.
AH5645
AH5645;                    North         East     Units Scale Factor Converg.

 DATA ITEM: Superseded Survey Control
 DISPLAYED: When available.
 COMMENTS : Superseded control are previously published data control values
            that are obsolete but reprinted for continuity of records.
            Format is similar to 'Current Survey Control',
            but is not marked with '*' in cc 8.
            AD means ADJUSTED, referring to horizontal position.
            GP means GPS_OBS, referring to GPS derived ellipsoidal height.
            This is followed by an epoch date (if available).
            This is followed by Order (if available, Horizontal or Vertical),
            then is followed by Class (if available, Vertical only).

            A horizontal Order of 'c' is used for CORS stations.
            Superseded elevations have no epoch date but the
            Order and Class are displayed for bench mark heights.
            The determination text used for superseded elevations
            is identical to that used for the current survey control.

            USSD refers to positions computed on the US Standard Datum
            (also called the North American Datum), which was realized
            prior to the North American Datum of 1927.  The positions
            were obtained from historical documents and the supporting
            observations are not stored in the NGS database. Therefore
            USSD values should be used with caution."

```

The following datums refer to positions computed on the US Standard Datum (also called the North American Datum) or earlier datums, which were realized prior to the North American Datum of 1927. The positions were obtained from historical documents and the supporting observations are not stored in the NGS database. Therefore, these superseded values should be used with caution.

US (CONUS) DATUMS:

ABBREVIATION	DEFINITION
USBS	BESSEL SPHEROID
USCA	CALIFORNIA STANDARD DATUM
USCC	CAMP COLONA 1890 DATUM
USCH	CHARLESTON AND SAVANNAH DATUM
ELPS	EL PASO DATUM
USIA	INDEPENDENT ASTRO DATUM 1880
MORC	MISSOURI RIVER COMMISSION DATUM
USNO	NEW ORLEANS MOBILE DATUM
USSD	US STANDARD DATUM
USVN	VICKSBURG NATCHEZ DATUM

ALASKA DATUMS:

ABBREVIATION	DEFINITION
AKAN	ANCHORAGE PT ASTRO DATUM
AKBA	BARTER ISLAND DATUM OF 1948
AKCC	CAMP COLONA 1890 DATUM
AKFW	KRIPNIYUK KWIKLOKCHUN DATUM
AKFX	FLAXMAN ISLAND DATUM 1912
AKGO	GOLOFNIN BAY 1899 DATUM
AKIL	ILIAMNA ASTRO DATUM
AKMI	MARY ISLAND POINT SIMPSON ASTRO DATUM
AKPB	POINT BARROW DATUM 1945
AKPC	POINT CLARENCE ASTRO DATUM
USPU	PUGET SOUND
AKPW	PRINCE WILLIAM SOUND DATUM
AKSE	SOUTHEAST ALASKA DATUM
AKSG	ST GEORGE 1897 DATUM
AKSM	SAINT MICHAEL ASTRO DATUM
AKSP	SAINT PAUL 1897
AKUN	UNALASKA DATUM
AKVD	VALDEZ DATUM
AKYA	YAKUTAT 1897 DATUM
AKYK	YUKON DATUM

Version 8.3 at 10:01am on 09/17/2013 (Sybase version) and re-released at 11:43am on 05/08/2014 (Oracle version) as part of the final changeover from Sybase to Oracle.

This release encompasses 5 change requests and 2 bug fixes:

6. Display the message "NAVD 88 orthometric height was determined with an earlier geoid model." whenever there is no orthometric height record in the database that matches the current geoid model. Note: the only orthometric height (elevation) records that [can] have a matching GEOID_HT record are those with an ELEV_SOURCE="H" and an ELEV_TECH="G".

   and

7. Remove of the HORIZ ORDER and ELLIP ORDER lines from CORS data sheets for all CORS stations except those where the CORS dtm_tag is "(CORS)" (a.k.a. CORS96).

An example datasheet BEFORE these two changes were made is shown below.

```

 FQ0454
 FQ0454.The horizontal coordinates were established by GPS observations
 FQ0454.and adjusted by the National Geodetic Survey in June 2012.
 FQ0454
 FQ0454.NAD 83(2011) refers to NAD 83 coordinates where the reference
 FQ0454.frame has been affixed to the stable North American tectonic plate. See
 FQ0454.www.ngs.noaa.gov/web/surveys/NA2011 for more information.
 FQ0454
 FQ0454.The horizontal coordinates are valid at the epoch date displayed above
 FQ0454.which is a decimal equivalence of Year/Month/Day.
 FQ0454
 FQ0454.The orthometric height was determined by differential leveling and
 FQ0454.adjusted by the NATIONAL GEODETIC SURVEY
 FQ0454.in June 1991.
 FQ0454
 FQ0454.WARNING-GPS observations at this control monument resulted in a GPS
 FQ0454.derived orthometric height which differed from the leveled height by
```

```
FQ0454.more than one decimeter (0.1 meter).
FQ0454
FQ0454.Photographs are available for this station.
FQ0454
```

This same example partial datasheet AFTER this message was removed is shown below.

9. Make sure the STATE/COUNTY and COUNTRY lines on the datasheet for only the countries of Canada, Mexico, and those in Central America (Belize, Costa Rica, El Salvador, Guatemala, Honduras, Nicaragua, Panama) come out in the following format:

```
STATE/COUNTY- <state_name>
COUNTRY      - <country_name>
```

versus

```
STATE/COUNTY- <state_code>/<county_name>
COUNTRY      - <country_code>
```

Example datasheets in these countries BEFORE the correction was made are below.

```

SERVICEbbbbbbbbbbbbbbbbb
 2013 (DRD)
 AA5758'MARK IS 14.38 M (47.2 FT) NORTHWEST OF MAILBOX 6900 AND 1.47 M
(4.8
 AA5758'FT) SOUTHWEST OF THE EDGE OF THE PAVEMENT OF THE ROAD.
```

11. Make it so that CORS sites PNB1 (PID=AH8904) and PNB2 (PID=AH8906) publicly publishable. We no longer have to look in the CORS_SITE_STATUS.STATUS field to see if a CORS ARP is publishable. This also means that on unpublishable datasheets that there no longer is a trigger/condition to display the horizontal or vertical reason code of "A - CORS site is not active" on them.

12. Make sure that on the NAVD88 line in the CURRENT SURVEY CONTROL section that the best height is the GPS_OBS record and not the old ADJUSTED record for PIDs BW1876 and BW1864. Also make sure that in the superseded section that the last ADJUSTED record is in the SUPERSEDED SURVEY CONTROL section.

The example datasheet for one of these PIDs, BW1876, BEFORE the correction was made is shown below.

```

BW1876
BW1876
BW1876.The horizontal coordinates were established by GPS observations
BW1876.and adjusted by the National Geodetic Survey in June 2012.
BW1876
BW1876.NAD 83(2011) refers to NAD 83 coordinates where the reference
BW1876.frame has been affixed to the stable North American tectonic plate. See
BW1876.www.ngs.noaa.gov/web/surveys/NA2011 for more information.
BW1876
BW1876.The horizontal coordinates are valid at the epoch date displayed above
BW1876.which is a decimal equivalence of Year/Month/Day.
BW1876
BW1876.The orthometric height was determined by differential leveling and
BW1876.adjusted by the NATIONAL GEODETIC SURVEY
BW1876.in February 1994.
BW1876
BW1876.The X, Y, and Z were computed from the position and the ellipsoidal ht.
BW1876
BW1876.The Laplace correction was computed from DEFLEC12A derived deflections.
BW1876
BW1876.The ellipsoidal height was determined by GPS observations
BW1876.and is referenced to NAD 83.
BW1876
BW1876.The dynamic height is computed by dividing the NAVD 88
BW1876.geopotential number by the normal gravity value computed on the
BW1876.Geodetic Reference System of 1980 (GRS 80) ellipsoid at 45
BW1876.degrees latitude (g = 980.6199 gals.).
BW1876
BW1876.The modeled gravity was interpolated from observed gravity values.
BW1876
BW1876. The following values were computed from the NAD 83(2011) position.
BW1876
BW1876;                    North         East     Units Scale Factor Converg.

BW1876
BW1876.The horizontal coordinates were established by GPS observations
BW1876.and adjusted by the National Geodetic Survey in June 2012.
BW1876
BW1876.NAD 83(2011) refers to NAD 83 coordinates where the reference
BW1876.frame has been affixed to the stable North American tectonic plate. See
BW1876.www.ngs.noaa.gov/web/surveys/NA2011 for more information.
BW1876
BW1876.The horizontal coordinates are valid at the epoch date displayed above
BW1876.which is a decimal equivalence of Year/Month/Day.
BW1876
BW1876.The orthometric height was determined by GPS observations and a
BW1876.high-resolution geoid model using precise GPS observation and
BW1876.processing techniques.
BW1876
BW1876.The X, Y, and Z were computed from the position and the ellipsoidal ht.
BW1876
BW1876.The Laplace correction was computed from DEFLEC12A derived deflections.
BW1876
BW1876.The ellipsoidal height was determined by GPS observations
BW1876.and is referenced to NAD 83.
BW1876
BW1876. The following values were computed from the NAD 83(2011) position.
BW1876
BW1876;                    North         East     Units Scale Factor Converg.

Version 8.2 at 12:55pm on 07/25/2013

This release adds the default crustal motion epoch of 2002.00 to positions found in the SUPERSEDED SURVEY CONTROL section of a datasheet where:

(1) The control point's superseded position has a dtm_tag of (2007) and
(2) The control point is located in a US state other than the six western states of "AK", "AZ", "CA", "NV', "OR", and WA.

and it adds the same default crustal motion epoch of 2002.00 to the this superseded position's matching ellipsoid height if and only if it's crustal motion is blank.

The crustal motion default epoch of 2002.00 on an ellipsoid height in the superseded survey control section of a datasheet (that matches by adj_id a superseded NAD83(2007) position) should not replace a *non-blank crustal motion epoch* already there such as 2006.81 for control point AU0092, a control point that resides in the dynamic regions/subsidence areas.

Example: The 2006.81 crustal motion epoch on the superseded ellipsoid height should not be replaced with 2002.00 as 2006.81 is a non-blank crustal motion epoch.

```
AU0092                          SUPERSEDED SURVEY CONTROL
AU0092
AU0092  ELLIP H (10/11/11)  -22.177  (m)                        GP(       ) 4 1
AU0092  NAD 83(2007)-  29 46 22.52606(N)    091 10 36.97894(W) AD(2002.00) A
AU0092  ELLIP H (03/12/08)  -22.114  (m)                        GP(2006.81) 3 1
AU0092  NAVD 88 (02/14/94)    3.834  (m)           12.58   (f) ADJUSTED    1 1
AU0092  NGVD 29 (??/??/??)    3.913  (m)           12.84   (f) ADJUSTED    1 1
```

Note: dtm_tag (i.e. "(2007)") is not to be confused with the horizontal datum (i.e. NAD83), even though both of them appear concatenated together (i.e. NAD83(2007)) on a datasheet. They are really two separate fields. Only positions with NAD83 can have the dtm_tag of (2007).

Version 8.1 release at 5:54pm on 03/19/2013

This release incorporates the new requirements for modifying the datasheet display rules for VTDP information in the Gulf Region found in the document https://source.ngs.noaa.gov/svn/repos/NGSIDBAPI/RetrievalApi/datasheet/docs/V8.1/RD_2013-02-11_Modify_rules_for_display_of_VTDP_messages.docx This release builds on top of dynamic region (in LA) initially defined in datasheet95 V7.89. Please refer to https://source.ngs.noaa.gov/svn/repos/NGSIDBAPI/RetrievalApi/datasheet/docs/V7.89/DATASHEET95_ReleaseNotes_7_89_updated.docx for more information on how the Gulf Region's dynamic regions.

A dynamic region/subsidence area is an area known or suspected of subsidence, uplift, or other tectonic vertical motion. In 2005, there was a single dynamic region in the state of LA that was defined with a *latitude/longitude polygon*. In 2007 the LA dynamic region polygon was put aside in favor of defining the dynamic regions in the state of LA with a series of *three minimum/maximum latitude/longitude areas*. As of 2012 the dynamic regions now spans the lower parts of Gulf Coast states of AL, FL, MS, and LA and is comprised of several

minimum/maximum latitude/longitude areas. These regions have been updated in this release and are comprised of the following sub-areas shown in Table 1. The changes to the latitude and longitude ranges are highlighted in green.

Table 1: Dynamic Regions/Subsidence Areas of the Gulf Coast

State	Latitude Range	Longitude Range
LA	latitude ≤ N303432	longitude ≥ W0912738
LA	latitude ≤ N304850	W0903401 ≤ longitude ≤ W0912738
LA	None	longitude ≤ W0903401
MS	latitude ≤ N320608	None
AL	latitude ≤ N312344	longitude ≥ W0880000
FL	latitude ≤ N303716	longitude ≥ W0870744

In a dynamic region/subsidence area, datasheets are publicly publishable for control points in specific projects (a.k.a. adjustment identifiers). If a control point is not part of these specific projects, then a public datasheet also includes the reason that the elevation for this control point should not be used in project (sample output below).

AU2715                          STATION DESCRIPTION
AU2715
AU2715'DESCRIBED BY LA DEPT OF HIGHWAYS 1972 (RT)
AU2715'THE STATION IS LOCATED 3 MILES NORTHEAST OF DOWNTOWN NEW ORLEANS, 5
AU2715'MILES NORTH OF GRETNA AND 8 MILES EAST OF KENNER, IN THE SOUTHEAST
AU2715'QUARTER OF SECTION 24, T12S, R11E, AND ON THE PROPERTY OWNED BY
AU2715'ORLEANS PARISH WATER BOARD.
AU2715'
AU2715'TO REACH THE STATION FROM THE INTERSECTION OF NORTH BROAD STREET AND
AU2715'TULANE AVENUE IN DOWNTOWN NEW ORLEANS, GO NORTHEAST ALONG NORTH
AU2715'BROAD STREET FOR 2.3 MILES TO PUMPING STATION NO. 3 ON THE LEFT AND
AU2715'NORTHWEST OF THE STREET.  THE STATION IS SET TO THE SOUTH OF
AU2715'THE PUMPING STATION NEAR A CLEAN-OUT RAMP ON A CANAL.
AU2715'
AU2715'THE STATION MARK IS A STANDARD LOUISIANA DEPARTMENT OF HIGHWAYS AND
AU2715'U. S. COAST AND GEODETIC SURVEY DISK SET IN A DRILL HOLE IN A
AU2715'CONCRETE SLAB CLEAN-OUT RAMP ON A CANAL, FLUSH WITH THE SLAB.  IT
AU2715'IS STAMPED BLOUNT 1972.  IT IS 74 FEET NORTH OF A POWER POLE, 58
AU2715'FEET WEST OF THE CENTER OF THE SOUTH BOUND LANE ON NORTH BROAD
AU2715'STREET, 43 FEET WEST OF A METAL DRAIN, 42 FEET NORTHWEST OF A
AU2715'SIGNAL LIGHT STANDARD, 39 FEET EAST OF THE NORTHEAST CORNER OF
AU2715'A METAL BUILDING, 2 FEET NORTH OF A METAL WITNESS POST AND SIGN, AND
AU2715'1 FOOT EAST OF THE WEST END OF A CONVEYOR FOR CLEAN-OUT ON CANAL.
AU2715'
AU2715'REFERENCE MARK 1 IS A STANDARD LOUISIANA DEPARTMENT OF HIGHWAYS AND
AU2715'U. S. COAST AND GEODETIC SURVEY DISK SET IN A DRILL HOLE IN THE
AU2715'SOUTHWEST CORNER OF A CONCRETE BASE FOR CONVEYOR, FLUSH WITH
AU2715'CONCRETE, 4 FEET ABOVE GROUND.  IT IS STAMPED BLOUND R.M. 1 1972.  IT
AU2715'IS 71 FEET WEST-SOUTHWEST OF THE CENTER OF THE SOUTH BOUND LANE OF
AU2715'NORTH BROAD STREET, 24 FEET NORTH-NORTHEAST OF THE NORTHEAST
AU2715'CORNER OF A METAL BUILDING, 21 FEET EAST-SOUTHEAST OF A CANAL
AU2715'CLEAN-OUT PLATFORM, AND 14 FEET NORTHWEST OF AN ELECTRIC CONTROL
AU2715'PANEL.
AU2715'
AU2715'REFERENCE MARK 2 IS A STANDARD LOUISIANA DEPARTMENT OF HIGHWAYS AND
AU2715'U. S. COAST AND GEODETIC SURVEY DISK SET IN A DRILL HOLD IN A
AU2715'CONCRETE SLAB FOR A CLEAN-OUT FOR CANAL, FLUSH WITH THE CONCRETE
AU2715'SLAB.  IT IS STAMPED BLOUNT R.M. 2 1972.  IT IS 80 FEET NORTH OF A
AU2715'POWER POLE, 33 FEET NORTH-NORTHWEST OF A SIGNAL LIGHT STANDARD, 32
AU2715'FEET WEST OF THE CENTER OF THE SOUTH BOUND LANE ON NORTH BROAD
AU2715'STREET, 18 FEET NORTH OF A METAL DRAIN, AND 1.5 FEET WEST OF THE EAST
AU2715'END OF A CONVEYOR ON A CLEAN-OUT FOR A CANAL.
AU2715'
AU2715'HEIGHT OF LIGHT ABOVE STATION MARK 1 METERS.
AU2715
AU2715                          STATION RECOVERY (1972)
AU2715
AU2715'RECOVERY NOTE BY LA DEPT OF HIGHWAYS 1972
AU2715'RECOVERED IN GOOD CONDITION.
AU2715
AU2715                          STATION RECOVERY (1988)
AU2715
AU2715'RECOVERY NOTE BY LA TRANSP AND DEV 1988
AU2715'THE STATION IS LOCATED 4.8 KM (3.00 MI) NORTHEAST OF DOWNTOWN NEW
AU2715'ORLEANS, 8 KM (4.95 MI) NORTH OF GRETNA AND 12.8 KM (7.95 MI) EAST OF
AU2715'KENNER, IN THE SOUTHEAST QUARTER OF SECTION 24, T 12 S, R 11 E.
AU2715'OWNERSHIP--ORLEANS PARISH WATER BOARD.
```

AU2715'TO REACH THE STATION FROM THE INTERSECTION OF NORTH BROAD STREET AND
AU2715'TULANE AVENUE IN DOWNTOWN NEW ORLEANS, GO NORTHEAST ALONG NORTH BROAD
AU2715'STREET FOR 3.7 KM (2.30 MI) TO PUMPING STATION NO. 3 ON THE LEFT AND
AU2715'NORTHWEST OF THE STREET. THE STATION IS SET TO THE SOUTH OF THE
AU2715'PUMPING STATION NEAR A CLEAN-OUT RAMP ON A CANAL.
AU2715'THE STATION MARK IS A STANDARD LOUISIANA DEPARTMENT OF HIGHWAYS AND U.
AU2715'S. COAST AND GEODETIC SURVEY DISK SET IN A DRILL HOLE IN A CONCRETE
AU2715'SLAB FLUSH WITH THE SURFACE OF THE RAMP 22.6 M (74.1 FT) NORTH OF A
AU2715'POWER POLE, 17.7 M (58.1 FT) WEST OF THE CENTER OF THE SOUTH BOUND
AU2715'LANE OF NORTH BROAD STREET, 13.1 M (43.0 FT) WEST OF A METAL DRAIN,
AU2715'12.8 M (42.0 FT) NORTHWEST OF A SIGNAL LIGHT STANDARD, 11.9 M
AU2715'(39.0 FT) EAST OF THE NORTHEAST CORNER OF A METAL BUILDING, 0.6 M
AU2715'(2.0 FT) NORTH OF A METAL WITNESS POST AND SIGN AND 0.3 M (1.0 FT)
AU2715'EAST OF THE WEST END OF A CONVEYER FOR CLEAN-OUT ON THE CANAL.
AU2715'REFERENCE MARK 1 IS A STANDARD LOUISIANA DEPARTMENT OF HIGHWAYS AND U
AU2715'S COAST AND GEODETIC SURVEY DISK SET IN A DRILL HOLE IN THE SOUTHWEST
AU2715'CORNER OF A CONCRETE BASE FOR A CONVEYER, 1.2 M (3.9 FT) ABOVE THE
AU2715'GROUND STAMPED---BLOUNT RM 1 1972---, 21.6 M (70.9 FT) WEST-SOUTHWEST
AU2715'OF THE CENTER OF THE SOUTH BOUND LANE OF NORTH BROAD STREET, 7.3 M
AU2715'(24.0 FT) NORTH-NORTHEAST OF THE NORTHEAST CORNER OF A METAL BUILDING,
AU2715'6.4 M (21.0 FT) EAST-SOUTHEAST OF A CANAL CLEAN-OUT PLATFORM AND 4.3 M
AU2715'(14.1 FT) NORTHWEST OF AN ELECTRIC CONTROL PANEL.
AU2715'REFERENCE MARK 2 IS A STANDARD LOUISIANA DEPARTMENT OF HIGHWAYS AND U
AU2715'S COAST AND GEODETIC SURVEY DISK STAMPED---BLOUNT RM 2 1972---SET IN A
AU2715'DRILL HOLE IN A CONCRETE SLAB FOR A CLEAN-OUT FOR THE CANAL 24.4 M
AU2715'(80.1 FT) NORTH OF A POWER POLE, 10.1 M (33.1 FT) NORTH-NORTHWEST OF A
AU2715'SIGNAL LIGHT STANDARD, 9.8 M (32.2 FT) WEST OF THE CENTER OF THE SOUTH
AU2715'BOUND LANE OF NORTH BROAD STREET, 5.5 M (18.0 FT) NORTH OF A METAL
AU2715'DRAIN AND 0.46 M (1.5 FT) WEST OF THE EAST END OF THE CONVEYER.

Control points in a dynamic region/subsidence area are publicly publishable if:

(1) The control point is in the Gulf Coast dynamic regions/subsidence areas (Table 1) ***and*** the control point is a list of publishable project/state combinations in the dynamic regions/subsidence areas (Table 3).

(2) The control point is in the Gulf Coast dynamic regions/subsidence areas (Table 1) ***and*** the control point itself is designated as being publicly publishable in the normally unpublishable region due to being constrained (i.e. must appear in a list of publishable UIDs for the region found in Table 4).

Below is a complete list of projects (a.k.a. ADJ_IDs) and their epochs that are in the Gulf Coast dynamic regions/subsidence areas. New projects added in datasheet95 V8.0 that weren't in datasheet95 V7.89 are highlighted in green.

Table 2: List of Publishable Projects in the Gulf Coast Dynamic Regions/Subsidence Areas

Project	Epoch
00000729/1	2009.55
00000729/2	2009.55

GPS2896/C	LA
GPS2896/C	MS
GPS2896/C	AL

*In the near future, control points in the state of LA and in project GPS2772 will be added to the list above.

Below is a list of control points (by their individual UID and PID) designated as publicly publishable regardless of the fact that they are in the dynamic regions/subsidence areas. These control points were constrained (held constant).

Table 4: Specific Control Points publishable in the Dynamic Regions/Subsidence Areas (unchanged from datasheet V7.89)

UID	PID
10478369	BH1210
10478372	BH1213
11634989	DL9666
11634990	DL9667
10478371	BH1212
10484553	BG1724

Control points not in a publishable project/state combination (Table 3) or not exceptions to the rule by UID (Table 4) formerly generated a datasheet with "NOT PUB" in the CURRENT SURVEY CONTROL section. This included control points in past project/state combinations that formerly generated a publishable datasheet if the control point was in one of them. A list of these formerly valid project/state combinations appears is Table 5 below. All control points that had one of these projects (a.k.a. ADJ_IDs) as their "best" NAVD88 elevation, have been superseded with projects in table 3 above.

Table 5: Past HT_MOD Projects in Louisiana that formerly generated a publishable datasheet if the control point was in one of them

Project	State
GPS2100	LA
GPS2021/C	LA
GPS2212	LA
GPS2307	LA
GPS2262	LA

There is a message (paragraph) that is new in datasheet95 V8.1. The message:

```
<PID> ** The orthometric height was determined with a Vertical Time-Dependent
<PID> ** Positioning (VTDP) model and has been validated through GNSS
<PID> ** observations for the NAVD 88 epoch indicated.  For additional
<PID> ** information on VTDP, please refer to the following web pages:
<PID> ** www.ngs.noaa.gov/heightmod/GulfCoastProject.shtml
<PID> ** www.ngs.noaa.gov/heightmod/NOAANOSNGSTR50.pdf
<PID>
```

Is displayed if:

(1) The control point is in a dynamic region/subsidence area (Table 1) and the control point is publishable in this area because it appears in either Table 3 or Table 4 *and*
(2) The control point was a HT_MOD (i.e. ELEVATION.ELEV_SOURCE="H" and ELEVATION.ELEV_TECH="G") or a Precise Leveled Bench Mark (ELEVATION.ELEV_SOURCE="H" and ELEVATION.ELEV_SOURCE="B") *and*
(3) The control point is VTDP constrained (i.e. UID appears in the LA_VTDP_CONSTRAINT table).

An example PID that produces this message on a datasheet is BH3030:

Version 8.0 released at 10:21am on 03/04/2013

In prior releases of the datasheet95 program, only passive marks had network and local accuracies as shown below:

```
AC6803  FGDC Geospatial Positioning Accuracy Standards (95% confidence, cm)
AC6803  Type                                          Horiz  Ellip  Dist(km)
AC6803  ----------------------------------------------------------------------
AC6803  NETWORK                                        0.56   1.10
AC6803  ----------------------------------------------------------------------
AC6803  MEDIAN LOCAL ACCURACY AND DIST (032 points)   0.81   1.74     58.94
AC6803  ----------------------------------------------------------------------
AC6803  NOTE: Click here for information on individual local accuracy
AC6803  values and other accuracy information.
```

In this version of datasheet95, computed CORS stations (i.e. those CORS sites in the CORS_POSITION table with non-NULL sigma field values) have network accuracies (but not local accuracies/median calculations) on datasheets similar to that shown below:

```
AF9562  FGDC Geospatial Positioning Accuracy Standards (95% confidence, cm)
AF9562  Type                                          Horiz  Ellip  Dist(km)
AF9562  ----------------------------------------------------------------------
AF9562  NETWORK                                        0.35   1.07
AF9562  ----------------------------------------------------------------------
AF9562  NOTE: Click here for information on individual local accuracy
AF9562  values and other accuracy information.
```

In addition, datasheets will display the paragraph below for modeled CORS stations (i.e. those CORS stations in the CORS_POSITION table with NULL sigma field values) only:

```
DH7952.Formal positional accuracy estimates are not available for this CORS
DH7952.because its coordinates were determined in part using modeled
DH7952.velocities. Approximate one-sigma accuracies for latitude, longitude,
DH7952.and ellipsoid height can be obtained from the short-term time series.
DH7952.Additional information regarding modeled velocities is available on
DH7952.the CORS Coordinates and Multi-Year CORS Solution FAQ web pages.
```

It is important to note that if the PID/mark selected is a
CORS L1 Phase Center (i.e. CORS_GROUP.CORS_TYPE=”L”) or a
CORS Monument (i.e. CORS_GROUP.CORS_TYPE=”M”) and not a
CORS ARP (i.e. CORS_GROUP.CORS_TYPE=”A”) that the calculations for Horiz, and Ellip are based on the CORS ARP position and network accuracy data. This can be seen in the datasheets for DN9092/DN9093/AI4469 which are the ARP/L1 Phase Center/Monument for the CORS site of AZU1 in the state of California.

Also important to note is that for a modeled CORS site, the link short-term time series in the paragraph:

```
DH7952.Formal positional accuracy estimates are not available for this CORS
DH7952.because its coordinates were determined in part using modeled
DH7952.velocities. Approximate one-sigma accuracies for latitude, longitude,
```

```
DH7952.and ellipsoid height can be obtained from the short-term time series.
DH7952.Additional information regarding modeled velocities is available on
DH7952.the CORS Coordinates and Multi-Year CORS Solution FAQ web pages.
```

will give a blank short-term time series graph if the site was decommissioned (i.e. DH7952), and a non-blank short-term time series graph otherwise (i.e. DN7446) .

Test 1: Run the datasheet95.w via the web link http://dev.ngs.noaa.gov/cgi-bin/datasheet.prl on the following PIDs to see if the network accuracies come out properly for the computed CORS components (ARP, L1 Phase Centers, Reference Monument). Make sure that the Horz, and Ellip values (highlighted in purple below) are the same in the network accuracy section as the ARP position and sigma values are to be used in their calculations.

- DN9092(CORS ARP),
- DN9093 (L1 Phase Center),
- AI4469 (Reference Monument)

The 3 example datasheet AFTER this correction has been completed can be seen below.

AI4469
AI4469
AI4469.The horizontal coordinates were established by GPS observations
AI4469.and adjusted by the National Geodetic Survey in June 2012.
AI4469
AI4469.NAD 83(2011) refers to NAD 83 coordinates where the reference
AI4469.frame has been affixed to the stable North American Tectonic Plate.
AI4469
AI4469.The horizontal coordinates are valid at the epoch date displayed above
AI4469.which is a decimal equivalence of Year/Month/Day.
AI4469
AI4469.The orthometric height was determined by GPS observations and a
AI4469.high-resolution geoid model.
AI4469
AI4469.The XYZ, and position/ellipsoidal ht. are equivalent.
AI4469
AI4469.The Laplace correction was computed from DEFLEC12A derived deflections.
AI4469
AI4469.The ellipsoidal height was determined by GPS observations
AI4469.and is referenced to NAD 83.
AI4469
AI4469. The following values were computed from the NAD 83(2011) position.
AI4469
AI4469;                   North         East     Units Scale Factor Converg.
AI4469;SPC CA 6     -   718,506.638 1,848,114.621   MT  1.00004955   -0 54 17.2

```

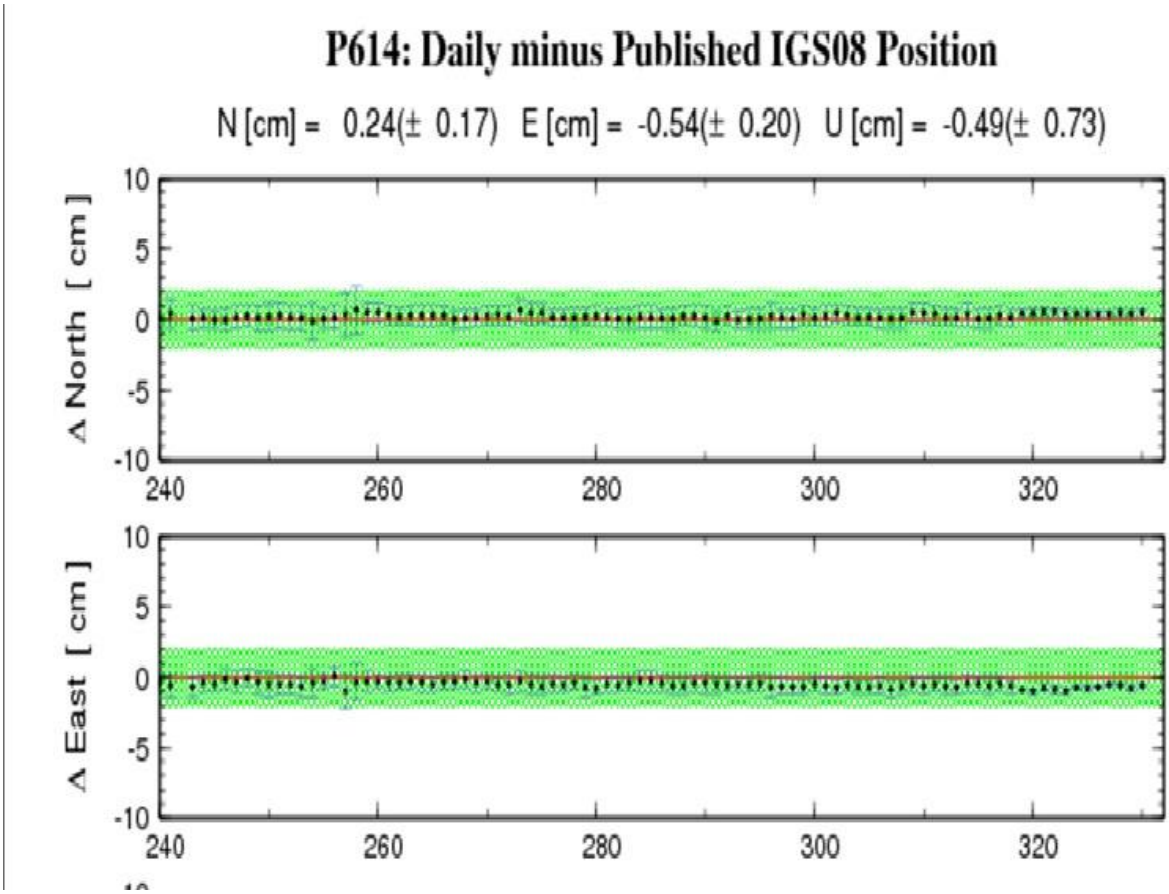
Now when you test the link short-term time series in the green highlighted paragraph for DN7446 you will not see a short-term time series graph but when you click the link short-term time series for DH7952 you will see a short-term time series graph like below:



This is because DN7446 is an active modeled CORS site whereas DH7952 is for a decommissioned CORS site.

Version 7.89.7 released at 4:34pm on 11/27/2012

This release incorporates 2 updates:

(1) The number format on the network accuracy lines on datasheets. The previous number format was:

```
 AW5439  FGDC Geospatial Positioning Accuracy Standards (95% confidence, cm)
 AW5439  Type                                          Horiz  Ellip  Dist(km)
 AW5439  ----------------------------------------------------------------------
 AW5439  NETWORK                                       99.99  99.99
 AW5439  ----------------------------------------------------------------------
 AW5439  MEDIAN LOCAL ACCURACY AND DIST (010 points)  99.99  99.99   9999.19
 AW5439  ----------------------------------------------------------------------
 AW5439  NOTE: Click here for information on individual local accuracy
 AW5439  values and other accuracy information.
```

The new number format is:

```
 AW5439  FGDC Geospatial Positioning Accuracy Standards (95% confidence, cm)
 AW5439  Type                                          Horiz  Ellip  Dist(km)
 AW5439  ----------------------------------------------------------------------
 AW5439  NETWORK                                    9999.99 999.99
 AW5439  ----------------------------------------------------------------------
 AW5439  MEDIAN LOCAL ACCURACY AND DIST (010 points)9999.99 999.99   9999.19
 AW5439  ----------------------------------------------------------------------
 AW5439  NOTE: Click here for information on individual local accuracy
 AW5439  values and other accuracy information.
```

An example datasheet BEFORE the number format was corrected can be seen below.

```

AW5439
AW5439
AW5439.The horizontal coordinates were established by GPS observations
AW5439.and adjusted by the National Geodetic Survey in June 2012.
AW5439
AW5439.NAD 83(2011) refers to NAD 83 coordinates where the reference
AW5439.frame has been affixed to the stable North American tectonic plate. See
AW5439.www.ngs.noaa.gov/web/surveys/NA2011 for more information.
AW5439
AW5439.The horizontal coordinates are valid at the epoch date displayed above
AW5439.which is a decimal equivalence of Year/Month/Day.
AW5439
AW5439.The orthometric height was determined by GPS observations and a
AW5439.high-resolution geoid model using precise GPS observation and
AW5439.processing techniques.
AW5439
AW5439.The X, Y, and Z were computed from the position and the ellipsoidal ht.
AW5439
AW5439.The Laplace correction was computed from DEFLEC12A derived deflections.
AW5439
AW5439.The ellipsoidal height was determined by GPS observations
AW5439.and is referenced to NAD 83.
AW5439
AW5439. The following values were computed from the NAD 83(2011) position.
AW5439
AW5439;                    North         East     Units Scale Factor Converg.

AW5439                          STATION DESCRIPTION
AW5439
AW5439'DESCRIBED BY NATIONAL GEODETIC SURVEY 1986
AW5439'8.1 KM (5.05 MI) NW FROM FAIRBANKS.
AW5439'3.9 KM (2.4 MI) NORTHWESTERLY ALONG U.S. HIGHWAY 290 FROM THE POST
AW5439'OFFICE IN FAIRBANKS, THENCE 4.2 KM (2.6 MI) WESTERLY ALONG FARM ROAD
AW5439'529, 29.9 M (98.1 FT) SOUTH OF THE CENTERLINE OF THE ROAD, 22.7 M
AW5439'(74.5 FT) NORTH OF THE NORTHEAST CORNER OF THE SYSTEMS OFFICE
AW5439'BUILDING, AND 1.5 M (4.9 FT) WEST OF THE WEST EDGE OF A SIDEWALK.
AW5439'NOTE--ACCESS TO DATUM POINT IS HAD THROUGH A 5-INCH LOGO CAP.
AW5439'THE MARK IS ABOVE LEVEL WITH THE ROAD.
AW5439
AW5439                          STATION RECOVERY (1987)
AW5439
AW5439'RECOVERY NOTE BY NATIONAL GEODETIC SURVEY 1987 (REP)
AW5439'THE STATION IS LOCATED ABOUT 28.2 KM (17.5 MI)
AW5439'NORTHWEST OF HOUSTON, 23.3 KM (14.5 MI) NORTHEAST OF KATY AND
AW5439'12.9 KM (8.0 MI) SOUTHEAST OF CYPRESS.
AW5439'OWNERSHIP--JOHN B GOSS SR, 13223 SPENCER ROAD, HOUSTON TX 77041,
AW5439'PHONE 713-466-3441.
AW5439'
AW5439'TO REACH THE STATION FROM THE INTERSECTION OF U.S. HIGHWAY 290 AND
AW5439'FARM ROAD 529, WHICH IS ABOUT 24.1 KM (15.0 MI) NORTHWEST OF
AW5439'HOUSTON, GO WEST ON FARM ROAD 529 FOR 4.0 KM (2.5 MI) TO THE
AW5439'STATION ON THE LEFT.
AW5439'
AW5439'THE STATION IS A PUNCH MARK IN THE TOP OF A STAINLESS STEEL ROD
AW5439'DRIVEN INTO THE GROUND AND INSIDE A 1-INCH PVC PIPE THAT IS 20 FEET
AW5439'LONG FILLED WITH GREASE THAT IS ENCASED IN A 5-INCH PVC PIPE WITH A
AW5439'LOGO CAP STAMPED---HGCSD 18 1986---, THE ROD IS RECESSED 10 CM
AW5439'BELOW THE GROUND.  LOCATED
AW5439'29.9 METERS (98.0 FT) SOUTH FROM THE CENTERLINE OF FARM ROAD 529,
AW5439'22.5 METERS (73.7 FT) NORTH FROM THE NORTHEAST CORNER OF THE
AW5439'MECHANICAL SYSTEMS BUILDING AND
AW5439'1.5 METERS (4.8 FT) WEST FROM THE WEST EDGE OF A NORTH-SOUTH
AW5439'SIDEWALK.
AW5439'
AW5439'HARRIS-GALVESTON, TEXAS, SUBSIDENCE NETWORK, JAN 1987.
AW5439'
AW5439'THIS STATION IS SUITABLE FOR GPS SURVEYS.
AW5439'

```

(2) Publish the latest available network and local accuracies on the datasheet based on the most recent load date for GPS projects loaded since the 2011 national readjustment. So if there were three local accuracies that were loaded at the time of the 2011 national readjustment, and two more were loaded after the 2011 national readjustment, then all five should be displayed on the listing of local accuracies. Also if no new position record is added (i.e. the position is held fixed) they can still add new network and local accuracy records. This means that we can no longer retrieve the network and local accuracies by UID/ADJ_ID/DATUM key but by UID/DATUM now.

An example datasheet BEFORE this correction can be seen below.

```

Version 7.89.6 released at 9:55am on 10/23/2012

This release updates datasheets to use the new DEFLEC12A model. The DEFLEC12A model's territory encompasses the states in CONUS, Alaska (AK), American Samoa (AS), Northern Marianas Islands (CQ), Guam (GU), Hawaii (HI), Puerto Rico (PR), and The US Virgin Islands (VQ).

An example datasheet BEFORE the updates to the deflections:

```

 AC6803
 AC6803
 AC6803.This mark is at Colorado City Municipal Airport (AZC)
 AC6803
 AC6803.The horizontal coordinates were established by GPS observations
 AC6803.and adjusted by the National Geodetic Survey in June 2012.
 AC6803
 AC6803.NAD 83(2011) refers to NAD 83 coordinates where the reference
 AC6803.frame has been affixed to the stable North American tectonic plate. See
 AC6803.www.ngs.noaa.gov/web/surveys/NA2011 for more information.
 AC6803
 AC6803.The horizontal coordinates are valid at the epoch date displayed above
 AC6803.which is a decimal equivalence of Year/Month/Day.
 AC6803
 AC6803.The orthometric height was determined by GPS observations and a
```

```
AC6803.high-resolution geoid model.
AC6803
AC6803.GPS derived orthometric heights for airport stations designated as
AC6803.PACS or SACS are published to 2 decimal places.  This maintains
AC6803.centimeter relative accuracy between the PACS and SACS.  It does
AC6803.not indicate centimeter accuracy relative to other marks which are
AC6803.part of the NAVD 88 network.
AC6803
AC6803.The X, Y, and Z were computed from the position and the ellipsoidal ht.
AC6803
AC6803.The Laplace correction was computed from DEFLEC09 derived deflections.
AC6803
AC6803.The ellipsoidal height was determined by GPS observations
AC6803.and is referenced to NAD 83.
AC6803
AC6803. The following values were computed from the NAD 83(2011) position.
AC6803

AC6803                           STATION DESCRIPTION
AC6803
AC6803'DESCRIBED BY JE CHANCE AND ASSOCIATES 1996 (SDC)
AC6803'THE STATION IS LOCATED APPROXIMATELY 6.5 KM (4.05 MI) SOUTHWEST OF THE
AC6803'TOWN OF COLORADO CITY AT THE COLORADO CITY MUNICIPAL AIRPORT.
AC6803'OWNERSHIP -- TOWN OF COLORADO CITY, LADELL BISTLINE - AIRPORT MANAGER,
AC6803'PHONE (520) 875-2308 TO REACH THE STATION FROM MILEPOST 1.4 OF STATE
AC6803'HIGHWAY 389 NEAR COLORADO CITY AT THE JUNCTION WITH A PAVED ROAD,
AC6803'PROCEED WEST ON THE PAVED ROAD FOR 1.3 KM (0.80 MI) , SOUTH FOR 2.4 KM
AC6803'(1.50 MI) , THEN WEST FOR 0.8 KM (0.50 MI) TO THE AIRPORT TERMINAL AND
AC6803'GATE.  PROCEED THROUGH GATE AND CONTINUE WESTERLY ACROSS APRON AND
AC6803'TAXIWAY FOR 0.15 KM (0.10 MI) TO THE JUNCTION WITH RUNWAY 2-20.  TURN
AC6803'RIGHT AND GO NORTH-NORTHEAST ALONG RUNWAY 2-20 FOR 0.65 KM (0.40 MI)
AC6803'TO THE END OF THE RUNWAY AND THE STATION ON THE LEFT THE STATION IS
AC6803'THE TOP CENTER OF A STAINLESS STEEL ROD DRIVEN TO REFUSAL AT A DEPTH
AC6803'OF 20.60 M (67.59 FT) RECESSED 12 CM BELOW GROUND LEVEL IN A 2.5 CM
AC6803'DIA GREASE FILLED FINNED PLASTIC SLEEVE 90 CM LONG ENCASED IN A 12.7
AC6803'CM DIA PVC PIPE WITH NGS LOGO CAP SURROUNDED BY CONCRETE.  THE LOGO
AC6803'CAP AND CONCRETE ARE SET FLUSH WITH THE GROUND. THE STATION IS LOCATED
AC6803'7.30 M (23.95 FT) SOUTHEAST OF A FENCE, 62.00 M (203.41 FT)
AC6803'NORTH-NORTHWEST OF THE NORTHWEST CORNER OF THE APPROACH END OF RUNWAY
AC6803'20, 57.60 M (188.98 FT) NORTH-NORTHWEST OF THE NORTHWESTERNMOST
AC6803'THRESHOLD LIGHT, 43.85 M (143.86 FT) NORTHEAST OF A STEEL FENCE POST
AC6803'SUPPORT THAT IS IN LINE WITH A NORTHWESTERLY EXTENSION OF THE NORTHERN
AC6803'EDGE OF RUNWAY 20, 109.2 M (358.3 FT) SOUTH-SOUTHWEST OF THE
AC6803'NORTHWESTERN FENCE CORNER, AND 0.9 M (3.0 FT) SOUTHEAST OF A CARSONITE
AC6803'WITNESS POST THE STATION IS DESIGNATED AS A PRIMARY AIRPORT CONTROL
AC6803'STATION (PACS) - ARIZONA ANA SURVEYS 1996

 AC6803
 AC6803
 AC6803.This mark is at Colorado City Municipal Airport (AZC)
 AC6803
 AC6803.The horizontal coordinates were established by GPS observations
 AC6803.and adjusted by the National Geodetic Survey in June 2012.
 AC6803
 AC6803.NAD 83(2011) refers to NAD 83 coordinates where the reference
 AC6803.frame has been affixed to the stable North American tectonic plate. See
 AC6803.www.ngs.noaa.gov/web/surveys/NA2011 for more information.
 AC6803
 AC6803.The horizontal coordinates are valid at the epoch date displayed above
```

```
AC6803.which is a decimal equivalence of Year/Month/Day.
AC6803
AC6803.The orthometric height was determined by GPS observations and a
AC6803.high-resolution geoid model.
AC6803
AC6803.GPS derived orthometric heights for airport stations designated as
AC6803.PACS or SACS are published to 2 decimal places.  This maintains
AC6803.centimeter relative accuracy between the PACS and SACS.  It does
AC6803.not indicate centimeter accuracy relative to other marks which are
AC6803.part of the NAVD 88 network.
AC6803
AC6803.The X, Y, and Z were computed from the position and the ellipsoidal ht.
AC6803
AC6803.The Laplace correction was computed from DEFLEC12A derived deflections.
AC6803
AC6803.The ellipsoidal height was determined by GPS observations
AC6803.and is referenced to NAD 83.
AC6803
AC6803. The following values were computed from the NAD 83(2011) position.
AC6803

AC6803                          STATION DESCRIPTION
AC6803
AC6803'DESCRIBED BY JE CHANCE AND ASSOCIATES 1996 (SDC)
AC6803'THE STATION IS LOCATED APPROXIMATELY 6.5 KM (4.05 MI) SOUTHWEST OF THE
AC6803'TOWN OF COLORADO CITY AT THE COLORADO CITY MUNICIPAL AIRPORT.
AC6803'OWNERSHIP -- TOWN OF COLORADO CITY, LADELL BISTLINE - AIRPORT MANAGER,
AC6803'PHONE (520) 875-2308 TO REACH THE STATION FROM MILEPOST 1.4 OF STATE
AC6803'HIGHWAY 389 NEAR COLORADO CITY AT THE JUNCTION WITH A PAVED ROAD,
AC6803'PROCEED WEST ON THE PAVED ROAD FOR 1.3 KM (0.80 MI) , SOUTH FOR 2.4 KM
AC6803'(1.50 MI) , THEN WEST FOR 0.8 KM (0.50 MI) TO THE AIRPORT TERMINAL AND
AC6803'GATE.  PROCEED THROUGH GATE AND CONTINUE WESTERLY ACROSS APRON AND
AC6803'TAXIWAY FOR 0.15 KM (0.10 MI) TO THE JUNCTION WITH RUNWAY 2-20.  TURN
AC6803'RIGHT AND GO NORTH-NORTHEAST ALONG RUNWAY 2-20 FOR 0.65 KM (0.40 MI)
AC6803'TO THE END OF THE RUNWAY AND THE STATION ON THE LEFT THE STATION IS
AC6803'THE TOP CENTER OF A STAINLESS STEEL ROD DRIVEN TO REFUSAL AT A DEPTH
AC6803'OF 20.60 M (67.59 FT) RECESSED 12 CM BELOW GROUND LEVEL IN A 2.5 CM
AC6803'DIA GREASE FILLED FINNED PLASTIC SLEEVE 90 CM LONG ENCASED IN A 12.7
AC6803'CM DIA PVC PIPE WITH NGS LOGO CAP SURROUNDED BY CONCRETE.  THE LOGO
AC6803'CAP AND CONCRETE ARE SET FLUSH WITH THE GROUND. THE STATION IS LOCATED
AC6803'7.30 M (23.95 FT) SOUTHEAST OF A FENCE, 62.00 M (203.41 FT)
AC6803'NORTH-NORTHWEST OF THE NORTHWEST CORNER OF THE APPROACH END OF RUNWAY
AC6803'20, 57.60 M (188.98 FT) NORTH-NORTHWEST OF THE NORTHWESTERNMOST
AC6803'THRESHOLD LIGHT, 43.85 M (143.86 FT) NORTHEAST OF A STEEL FENCE POST
AC6803'SUPPORT THAT IS IN LINE WITH A NORTHWESTERLY EXTENSION OF THE NORTHERN
AC6803'EDGE OF RUNWAY 20, 109.2 M (358.3 FT) SOUTH-SOUTHWEST OF THE
AC6803'NORTHWESTERN FENCE CORNER, AND 0.9 M (3.0 FT) SOUTHEAST OF A CARSONITE
AC6803'WITNESS POST THE STATION IS DESIGNATED AS A PRIMARY AIRPORT CONTROL
AC6803'STATION (PACS) - ARIZONA ANA SURVEYS 1996
AC6803
AC6803                          STATION RECOVERY (1997)
AC6803
AC6803'RECOVERY NOTE BY NATIONAL GEODETIC SURVEY 1997 (AJL)
AC6803'THE STATION IS LOCATED ABOUT 5.0 KM (3.10 MI) SOUTHWEST OF COLORADO
AC6803'CITY AT THE COLORADO CITY MUNICIPAL AIRPORT, ALONG THE WEST SIDE OF
AC6803'AND NEAR THE NORTH END OF RUNWAY 2-20.  OWNERSHIP--CITY OF COLORADO
AC6803'CITY, LADELL BISTLINE, AIRPORT MANAGER, BOX 70, COLORADO CITY, AZ
AC6803'86021.  THE PHONE NUMBER IS (520) 875-2646.  TO REACH THE STATION FROM
AC6803'THE JUNCTION OF STATE HIGHWAY 389 AND THE ARIZONA/UTAH STATE LINE, GO
AC6803'SOUTHEASTERLY FOR 2.2 KM (1.35 MI) ON THE HIGHWAY TO A PAVED ROAD
AC6803'RIGHT.  TURN RIGHT AND GO WEST THEN SOUTH ON MOHAVE AVENUE THEN
AC6803'REDWOOD STREET (THERE ARE NO STREET SIGNS) FOR 3.7 KM (2.30 MI) TO A
AC6803'PAVED ROAD RIGHT.  TURN RIGHT AND GO WEST THEN SOUTH FOR 0.9 KM (0.55
AC6803'MI) ON AIRPORT AVENUE (THERE IS NO STREET SIGN) TO A LOCKED GATE AND
AC6803'THE AIRPORT ADMINISTRATIVE BUILDING (UNATTENDED) ON THE RIGHT.  PASS
AC6803'THROUGH THE LOCKED GATE AND GO NORTHWEST FOR 0.2 KM (0.10 MI) ACROSS A
AC6803'RAMP AND ALONG A TAXIWAY TO RUNWAY 2-20.  TURN RIGHT AND GO NORTHEAST
AC6803'FOR 0.6 KM (0.35 MI) ALONG THE RUNWAY TO THE STATION ON THE LEFT JUST
AC6803'PAST RUNWAY END 20.  THE STATION IS LOCATED 61.9 M (203.1 FT)
AC6803'NORTH-NORTHWEST OF THE NORTHWEST CORNER OF THE RUNWAY, 53.6 M (175.9
AC6803'FT) NORTHWEST OF THE EXTENDED CENTER OF THE RUNWAY, 7.3 M (24.0 FT)
AC6803'SOUTHEAST OF A FENCE LINE, 0.9 M (3.0 FT) SOUTHEAST OF A CARSONITE
AC6803'WITNESS POST, AND THE MONUMENT IS FLUSH WITH THE GROUND SURFACE.
AC6803'NOTE--AIRPORT IS UNATTENDED.  A PHILLIPS SCREW DRIVER IS REQUIRED TO
AC6803'ACCESS THE DATUM POINT THROUGH THE LOGO CAP. THIS STATION SELECTED AS
AC6803'THE PACS FOR THIS AIRPORT.
AC6803
AC6803                          STATION RECOVERY (2008)

Version 7.89.5 released at 3:31pm on 10/18/2012

This release the datasheet for PN1345 is displaying the best height as a GPS_OBS (i.e. adj_id GPS2361/C) when it should be displaying the ADJUSTED leveled height (i.e. 00000712). Also it should not display the GEOID03 lines. The incorrect datasheet is below:

```

PN1345                          STATION DESCRIPTION
PN1345
PN1345'DESCRIBED BY WI HIGHWAY DEPT 1989
```

PN1345'THE STATION IS LOCATED ABOUT 11.26 KM (7.00 MI) NORTHWEST OF GREEN
PN1345'BAY, 41.8 KM (25.95 MI) SOUTHEAST OF SHAWANO, 41.8 KM (25.95 MI)
PN1345'NORTHEAST OF APPLETON. OWNERSHIP--STATE HIGHWAY R.O.W.
PN1345'TO REACH FROM THE JUNCTION OF U.S. HIGHWAY 41 AND STATE ROUTE 29
PN1345'NORTHWEST OF GREEN BAY, GO NORTHWEST FOR 8.55 KM (5.30 MI) ON STATE
PN1345'ROUTE 29 TO THE STATION ON THE RIGHT.
PN1345'THE STATION IS A STANDARD NGS HORIZONTAL CONTROL DISK STAMPED--GREEN
PN1345'BAY GPS 1989--, SET INTO THE TOP OF A 40 CM DIAMETER CONCRETE MONUMENT
PN1345'SET FLUSH WITH THE GROUND. LOCATED 34.4 M (112.9 FT) WEST FROM THE
PN1345'CENTER-LINE OF MARLEY STREET, 53.6 M (175.9 FT) NORTHEAST FROM THE
PN1345'CENTER-LINE OF STATE ROUTE 29, 1.92 M (6.3 FT) NORTHEAST FROM A STEEL
PN1345'WITNESS POST, 0.98 M (3.2 FT) SOUTH FROM A CARSONITE WITNESS POST,
PN1345'0.98 M (3.2 FT) NORTH FROM A CARSONITE WITNESS POST, 386.24 M
PN1345'(1267.2 FT) NORTHWEST FROM THE CENTER-LINE OF THE JUNCTION OF COUNTY
PN1345'ROAD VV SOUTH AND MARLEY STREET NORTH.
PN1345
PN1345   STATION RECOVERY (1990)
PN1345
PN1345'RECOVERY NOTE BY NATIONAL GEODETIC SURVEY 1990
PN1345'THE STATION IS LOCATED ABOUT 41.8 KM (26.0 MI) NORTHEAST OF APPLETON,
PN1345'41.8 KM (26.0 MI) SOUTHEAST OF SHAWANO AND 11.3 KM (7.0 MI) NORTHWEST
PN1345'OF GREEN BAY. OWNERSHIP--WISCONSIN DEPARTMENT OF TRANSPORTATION,
PN1345'P.O. BOX 7916, MADISON, WI 53707, PHONE 608-267-2462.
PN1345'TO REACH THE STATION FROM THE JUNCTION OF U.S. HIGHWAY 41 AND STATE
PN1345'HIGHWAY 29 IN NORTHWEST GREEN BAY, GO NORTHWEST ON STATE HIGHWAY 29
PN1345'FOR 8.55 KM (5.31 MI) TO THE STATION ON THE RIGHT IN A SMALL FIELD.
PN1345'THE STATION IS LOCATED 386.2 M (1267.1 FT) NORTHWEST FROM THE CENTER
PN1345'OF THE JUNCTION OF COUNTY ROAD VV AND MARLEY STREET, 53.6 M
PN1345'(175.9 FT) NORTHEAST FROM THE CENTERLINE OF THE NORTHWEST BOUND LANES
PN1345'OF STATE HIGHWAY 29, 34.4 M (112.9 FT) WEST FROM THE CENTERLINE OF
PN1345'MARLEY STREET, 1.92 M (6.30 FT) NORTHEAST FROM A METAL WITNESS POST
PN1345'AND 0.98 M (3.22 FT) SOUTH FROM A CARSONITE WITNESS POST AND IS FLUSH
PN1345'WITH THE GROUND.
PN1345
PN1345   STATION RECOVERY (1993)
PN1345
PN1345'RECOVERY NOTE BY NATIONAL OCEAN SERVICE 1993 (RAH)
PN1345'RECOVERED AS DESCRIBED.
PN1345
PN1345   STATION RECOVERY (1997)
PN1345
PN1345'RECOVERY NOTE BY WI HIGHWAY DEPT 1997 (CSM)
PN1345'THE STATION IS LOCATED ABOUT 41.88 KM (26.00 MI) NORTHEAST OF
PN1345'APPLETON, 41.88 KM (26.00 MI) SOUTHEAST OF SHAWANO, AND 11.3 KM (7.00
PN1345'MI) NORTHWEST OF GREEN BAY ON THE NORTH RIGHT-OF-WAY OF STATE HIGHWAY
PN1345'29 IN THE VILLAGE OF HOWARD. OWNERSHIP--WISCONSIN DEPARTMENT OF
PN1345'TRANSPORTATION. TO REACH THE STATION FROM THE JUNCTION OF US HIGHWAY
PN1345'41 WITH HIGHWAY 29 IN THE NORTHWEST PART OF THE CITY OF GREEN BAY, GO
PN1345'NORTHWEST 8.1 KM (5.05 MI) ON STATE HIGHWAY 29 TO THE JUNCTION WITH
PN1345'MARLEY STREET AND MILLTOWN ROAD ON THE RIGHT, TURN RIGHT AND GO NORTH
PN1345'AND NORTHWEST 0.32 KM (0.20 MI) ON MARLEY STREET TO THE STATION ON THE
PN1345'LEFT IN A GRASSY AREA THAT IS THE OBLITERATED PORTION OF THE OLD
PN1345'MARLEY STREET. THE STATION IS A BRONZE NGS HORIZONTAL CONTROL MARK
PN1345'DISK SET IN THE TOP OF A 40-CM (16-INCH) DIAMETER, 6-FOOT-DEEP
PN1345'CONCRETE POST FLUSH WITH THE GROUND. THE STATION IS 53.6 M (175.9 FT)
PN1345'NORTHEAST OF THE CENTERLINE OF THE WESTBOUND LANES OF HIGHWAY 29, 34.4
PN1345'M (112.9 FT) WEST OF THE CENTERLINE OF MARLEY STREET, 25.7 M (84.3 FT)
PN1345'SOUTH-SOUTHEAST OF A CONCRETE MONUMENT WITH AN ALUMINUM DISK STAMPED
PN1345'--1220 HOR WIDOT--, 26.4 M (86.6 FT) SOUTH-SOUTHEAST OF A YELLOW
PN1345'WOODEN RIGHT-OF-WAY POST WITH A SURVEY MARK WITNESS SIGN, 27.4 M (89.9
PN1345'FT) SOUTH-SOUTHEAST OF A 15-CM (6-INCH) DIAMETER ELM TREE, 1.92 M
PN1345'(6.30 FT) SOUTH OF A METAL WITNESS POST, 0.95 M (3.12 FT) NORTH OF AN
PN1345'ORANGE FIBERGLASS WITNESS POST, AND 1.05 M (3.44 FT) WEST OF A WHITE

```
PN1345'PLASTIC WITNESS POST.

*** retrieval complete.
Elapsed Time = 00:00:04
```

This issue occurred because of a new scenario we now have in the database where we are taking GPS_OBS (i.e. ELEVATION.ELEV_SOURCE=”H” and ELEVATION.ELEV_TECH=”G”) that was not re-observed (with a new OBS_DATE in the GPS_OBS table; it has no OBS_DATE) and readjusting it because of NA2011. Therefore, instead of looking at the OBS_DATE here we

must look at the readjusted date in the ADJUSTMENTS table and then see if we have a later leveling date using the ADJUSTMENTS.ADJ_DATE for ADJ_ID in question and not the maximum LEV_OBS date (since there is none; it is blank).

The corrected datasheet for PN1345 will now display the following datasheet.

```
1        National Geodetic Survey,   Retrieval Date = OCTOBER  3, 2012

PN1345                          STATION DESCRIPTION
PN1345
PN1345'DESCRIBED BY WI HIGHWAY DEPT 1989
PN1345'THE STATION IS LOCATED ABOUT 11.26 KM (7.00 MI) NORTHWEST OF GREEN
PN1345'BAY, 41.8 KM (25.95 MI) SOUTHEAST OF SHAWANO, 41.8 KM (25.95 MI)
PN1345'NORTHEAST OF APPLETON.  OWNERSHIP--STATE HIGHWAY R.O.W.
PN1345'TO REACH FROM THE JUNCTION OF U.S. HIGHWAY 41 AND STATE ROUTE 29
PN1345'NORTHWEST OF GREEN BAY, GO NORTHWEST FOR 8.55 KM (5.30 MI) ON STATE
PN1345'ROUTE 29 TO THE STATION ON THE RIGHT.
PN1345'THE STATION IS A STANDARD NGS HORIZONTAL CONTROL DISK STAMPED--GREEN
PN1345'BAY GPS 1989--, SET INTO THE TOP OF A 40 CM DIAMETER CONCRETE MONUMENT
PN1345'SET FLUSH WITH THE GROUND.  LOCATED 34.4 M (112.9 FT) WEST FROM THE
PN1345'CENTER-LINE OF MARLEY STREET, 53.6 M (175.9 FT) NORTHEAST FROM THE
PN1345'CENTER-LINE OF STATE ROUTE 29, 1.92 M (6.3 FT) NORTHEAST FROM A STEEL
PN1345'WITNESS POST, 0.98 M (3.2 FT) SOUTH FROM A CARSONITE WITNESS POST,
PN1345'0.98 M (3.2 FT) NORTH FROM A CARSONITE WITNESS POST, 386.24 M
PN1345'(1267.2 FT) NORTHWEST FROM THE CENTER-LINE OF THE JUNCTION OF COUNTY
PN1345'ROAD VV SOUTH AND MARLEY STREET NORTH.
PN1345
PN1345                          STATION RECOVERY (1990)
PN1345
PN1345'RECOVERY NOTE BY NATIONAL GEODETIC SURVEY 1990
PN1345'THE STATION IS LOCATED ABOUT 41.8 KM (26.0 MI) NORTHEAST OF APPLETON,
PN1345'41.8 KM (26.0 MI) SOUTHEAST OF SHAWANO AND 11.3 KM (7.0 MI) NORTHWEST
PN1345'OF GREEN BAY.  OWNERSHIP--WISCONSIN DEPARTMENT OF TRANSPORTATION,
PN1345'P.O. BOX 7916, MADISON, WI 53707, PHONE 608-267-2462.
PN1345'TO REACH THE STATION FROM THE JUNCTION OF U.S. HIGHWAY 41 AND STATE
PN1345'HIGHWAY 29 IN NORTHWEST GREEN BAY, GO NORTHWEST ON STATE HIGHWAY 29
PN1345'FOR 8.55 KM (5.31 MI) TO THE STATION ON THE RIGHT IN A SMALL FIELD.
PN1345'THE STATION IS LOCATED 386.2 M (1267.1 FT) NORTHWEST FROM THE CENTER
PN1345'OF THE JUNCTION OF COUNTY ROAD VV AND MARLEY STREET, 53.6 M
PN1345'(175.9 FT) NORTHEAST FROM THE CENTERLINE OF THE NORTHWEST BOUND LANES
PN1345'OF STATE HIGHWAY 29, 34.4 M (112.9 FT) WEST FROM THE CENTERLINE OF
PN1345'MARLEY STREET, 1.92 M (6.30 FT) NORTHEAST FROM A METAL WITNESS POST
PN1345'AND 0.98 M (3.22 FT) SOUTH FROM A CARSONITE WITNESS POST AND IS FLUSH
PN1345'WITH THE GROUND.
PN1345
PN1345                          STATION RECOVERY (1993)
PN1345
PN1345'RECOVERY NOTE BY NATIONAL OCEAN SERVICE 1993 (RAH)
PN1345'RECOVERED AS DESCRIBED.
PN1345
PN1345                          STATION RECOVERY (1997)
PN1345
PN1345'RECOVERY NOTE BY WI HIGHWAY DEPT 1997 (CSM)
PN1345'THE STATION IS LOCATED ABOUT 41.88 KM (26.00 MI) NORTHEAST OF
PN1345'APPLETON, 41.88 KM (26.00 MI) SOUTHEAST OF SHAWANO, AND 11.3 KM (7.00
PN1345'MI) NORTHWEST OF GREEN BAY ON THE NORTH RIGHT-OF-WAY OF STATE HIGHWAY
PN1345'29 IN THE VILLAGE OF HOWARD.  OWNERSHIP--WISCONSIN DEPARTMENT OF
PN1345'TRANSPORTATION.  TO REACH THE STATION FROM THE JUNCTION OF US HIGHWAY
PN1345'41 WITH HIGHWAY 29 IN THE NORTHWEST PART OF THE CITY OF GREEN BAY, GO
PN1345'NORTHWEST 8.1 KM (5.05 MI) ON STATE HIGHWAY 29 TO THE JUNCTION WITH
PN1345'MARLEY STREET AND MILLTOWN ROAD ON THE RIGHT, TURN RIGHT AND GO NORTH
PN1345'AND NORTHWEST 0.32 KM (0.20 MI) ON MARLEY STREET TO THE STATION ON THE
PN1345'LEFT IN A GRASSY AREA THAT IS THE OBLITERATED PORTION OF THE OLD
PN1345'MARLEY STREET.  THE STATION IS A BRONZE NGS HORIZONTAL CONTROL MARK
PN1345'DISK SET IN THE TOP OF A 40-CM (16-INCH) DIAMETER, 6-FOOT-DEEP
PN1345'CONCRETE POST FLUSH WITH THE GROUND.  THE STATION IS 53.6 M (175.9 FT)
PN1345'NORTHEAST OF THE CENTERLINE OF THE WESTBOUND LANES OF HIGHWAY 29, 34.4
```

```
PN1345'M (112.9 FT) WEST OF THE CENTERLINE OF MARLEY STREET, 25.7 M (84.3 FT)
PN1345'SOUTH-SOUTHEAST OF A CONCRETE MONUMENT WITH AN ALUMINUM DISK STAMPED
PN1345'--1220 HOR WIDOT--, 26.4 M (86.6 FT) SOUTH-SOUTHEAST OF A YELLOW
PN1345'WOODEN RIGHT-OF-WAY POST WITH A SURVEY MARK WITNESS SIGN, 27.4 M (89.9
PN1345'FT) SOUTH-SOUTHEAST OF A 15-CM (6-INCH) DIAMETER ELM TREE, 1.92 M
PN1345'(6.30 FT) SOUTH OF A METAL WITNESS POST, 0.95 M (3.12 FT) NORTH OF AN
PN1345'ORANGE FIBERGLASS WITNESS POST, AND 1.05 M (3.44 FT) WEST OF A WHITE
PN1345'PLASTIC WITNESS POST.

Version 7.89.4 released at 10:37am on 09/14/2012

This release includes 2 main changes:
(1) The intg.w program has been updated to use the GEOID12A grids versus the GEOID12 grids it used previously. Several modules are common to intg.w and datasheet95.w and these modules were incorporated into datasheet95.w. Note: datasheet95.w calls the intg.w program to calculate/interpolate the geoid height on the datasheets. The latest version of intg.w is V3.17.

(2) A change to the best (publishable) position algorithm. Eighteen CORS stations have only IGS08 positions/coordinates and no NAD83 (2011) positions/coordinates and thus they are no longer publicly publishable.

The 18 CORS stations that are no longer publicly publishable are:

TEGU
INEG
JAMA
GALA
ESTI
MANA
BARB
CIC1
GUAT
SLOR
SSIA
BRMU
TEG1
ELEN
HUEH
GCGT
CBSB
CRCC

These CORS sites will generate the new reason code below on the datasheet output.

```
I        No NAD83 coordinates available, only IGS08 coordinates
```

An example of a CORS site that generates this message can be seen below.

```
DATABASE = DEVTESTNGSIDB , PROGRAM = datasheet95, VERSION = 7.89.4

Version 7.89.3.1 released at 3:12pm on 09/11/2012

This release fixes 3 issues. With the first issue, some datasheets in the dynamic regions that the EPOCH line was on were displaying the line with no date on it. An example of this is shown below.

```
PROGRAM = datasheet95, VERSION = 7.89.3

```

The datasheet should not have printed out in the first place, as it is a mark within the dynamic regions/subsidence areas. Early on in the program, whenever a mark is not publishable, the UID and the ADJ_ID (and several other fields) get blanked out. When we went to print out the datasheet, the functions that were used later on to determine if the mark was in a dynamic region/subsidence area didn't return the correct value when the UID and ADJ_ID were blanked out. This is now corrected.

For the second issue when one retrieved datasheets by_stream (i.e. by county, area, radius) and not as a single mark (i.e. by single PID) for some Pacific islands (such as Palau), one might get a single datasheet and then a core dump occurred.

This issue was caused by a global versus local variable issue in the https://source.ngs.noaa.gov/svn/repos/commonLib/fortlib/tags/release-3.1/geoid_egm08.f Fortran module for the geoid_egm08 program which is then in turn called by datasheet95. This issue was corrected.

For the third issue it was noticed that on some datasheets that the agency name was not present on the differential leveling message paragraph. An example of this is the datasheet for FS0657 (shown below):

```

FS0657
FS0657'DESCRIBED BY COAST AND GEODETIC SURVEY 1934 (CP)
FS0657'STATION IS ON TOP OF SMALL KNOLL ABOUT 120 FEET N OF THE
FS0657'SEARCHLIGHT FERRY ROAD.  KNOLL IS 4.9 MILES BY ROAD E OF
FS0657'SEARCHLIGHT FERRY.  STATION IS 11.918 METERS N OF GENERAL
FS0657'LAND OFFICE 1/4 CORNER SEC. MARK MARKING S10 S15 T 29 S,
FS0657'R 22 W, NEAR GILA AND SALT RIVERS.
FS0657'
FS0657'THE STATION MARK IS A STANDARD BRONZE DISK WEDGED IN A DRILL
FS0657'HOLE IN A BOULDER.
FS0657'
FS0657'REFERENCE MARK NO. 1 IS A STANDARD BRONZE DISK WEDGED IN A
FS0657'DRILL HOLE IN OUTCROPPING BEDROCK.
FS0657'
FS0657'U.S.C. AND G.S. BENCH MARK R-52 IS 200 YARDS E OF THE S SIDE
FS0657'OF ROAD AND WAS USED AS AN AZIMUTH MARK.  IT IS A STANDARD
FS0657'DISK SET IN CONCRETE.
FS0657'
FS0657'REACH FROM SEARCHLIGHT FERRY BY GOING E ON THE ROAD TO CHLORIDE
FS0657'4.9 MILES TO THE KNOLL ON THE N OF THE ROAD.  THE GENERAL
FS0657'LAND OFFICE PIPE CAN BE SEEN FROM THE ROAD AT THIS POINT.
FS0657
FS0657                          STATION RECOVERY (1941)
FS0657
FS0657'RECOVERY NOTE BY COAST AND GEODETIC SURVEY 1941 (EHS)
FS0657'THIS STATION WAS RECOVERED AND FOUND TO BE IN GOOD CONDITION.
FS0657'PARTY DID NOT HAVE A COPY OF THE ORIGINAL DESCRIPTION AT THE
FS0657'TIME OF RECOVERY.
FS0657'
FS0657'STATION IS A STANDARD DISK SET IN TOP OF SMALL BOULDER,
FS0657'HORIZONTALLY.  IT IS ON THE RIGHT-OF-WAY OF ROAD TO AERIAL
FS0657'FERRY.  ON TOP OF A NARROW GRAVEL RIDGE ABOUT 500 FEET LONG.
FS0657'ABOUT 200 FEET EAST OF THE WEST END OF THE RIDGE.  175 FEET
FS0657'NORTH OF THE CENTER LINE OF THE ROAD AND ABOUT 4 FEET WEST OF
FS0657'A 4 X 4 INCH WHITE WOODEN POST PROJECTING ABOUT 2 FEET.
FS0657'
FS0657'R.M. NO. 1 IS A STANDARD DISK SET HORIZONTALLY IN TOP OF A
FS0657'ROCK OUTCROP.  IT IS 36 FEET WEST OF THE STATION AND ABOUT
```

```
FS0657'55 YARDS NORTH OF THE CENTER LINE OF THE ROAD.
FS0657'
FS0657'TO REACH FROM CHLORIDE, ARIZONA GO SOUTHWESTERLY ON ARIZONA
FS0657'STATE HIGHWAY 62 FOR 3.6 MILES TO U.S. HIGHWAY 93.  TURN
FS0657'RIGHT, NORTHERLY AND CONTINUE ON U.S. HIGHWAY 93 FOR 9.0
FS0657'MILES TO INTERSECTION OF HIGHWAY WITH ROAD TO AERIAL FERRY.
FS0657'THENCE CONTINUE ON ROAD TO AERIAL FERRY FOR 18.4 MILES TO
FS0657'STATION SITE.
FS0657
FS0657                          STATION RECOVERY (1950)
FS0657
FS0657'RECOVERY NOTE BY COAST AND GEODETIC SURVEY 1950
FS0657'25.3 MI W FROM GRASSHOPPER JUNCTION.
FS0657'7.4 MILES NORTHWEST ALONG U.S. HIGHWAY 93 FROM THE JUNCTION OF
FS0657'STATE HIGHWAY 62 AT GRASSHOPPER JUNCTION, THENCE 17.9 MILES WEST
FS0657'ALONG A DIRT ROAD LEADING TO THE OLD AERIAL FERRY LANDING, ON TOP
FS0657'OF THE APPROXIMATE CENTER OF AND ABOUT 94 YARDS NORTHEAST OF THE
FS0657'SOUTHWEST END OF A PROMINENT GRAVEL RIDGE ABOUT 250 YARDS LONG,
FS0657'IN THE TOP OF A SMALL BOULDER PROJECTING 0.2 FOOT ABOVE THE GROUND,
FS0657'168 1/2 FEET NORTHWEST OF THE CENTER LINE OF THE ROAD, 3.4 FEET
FS0657'WEST OF A WITNESS POST, AND ABOUT 12 FEET HIGHER THAN THE ROAD.

*** retrieval complete.
Elapsed Time = 00:00:02
```

This issue is now corrected.

Version 7.89.3 released at 10:29am on 08/23/2012

This release fixes an issue for archival datasheets. When the NGS webmaster went to create the monthly datasheet archive for the state of Alaska, he got two datasheets for AK and then a core dump. The core dump happened on PID TT3085. This was the output he got for TT3085.

Command: datasheet95 TT3085

Output:

```
PROGRAM = datasheet95, VERSION = 7.89.2
1        National Geodetic Survey,   Retrieval Date = AUGUST 16, 2012
 TT3085 ***********************************************************************
 TT3085  DESIGNATION -  1 C USLM

 TT3085  ______________________________________________________________________
 TT3085  LAPLACE CORR    -          3.37  (seconds)                     DEFLEC09
 TT3085  GEOID HEIGHT    -          5.25  (meters)                      GEOID12
 TT3085  HORZ ORDER      -  SECOND
Segmentation Fault (core dumped)
```

This has been corrected in this version.

Version 7.89.2 released at 3:53pm on 08/16/2012

This release covers 2 minor changes:
(1) a fix where the Horiz value in the network accuracy on datasheets does not always match that of the Horiz value on the lna_ret output and should.

An example of this non-matching occurring is with the datasheet for UW0219

```
UW0219  FGDC Geospatial Positioning Accuracy Standards (95% confidence, cm)
UW0219  Type                                          Horiz  Ellip  Dist(km)
UW0219  ----------------------------------------------------------------------
UW0219  NETWORK                                        8.19  17.93
UW0219  ----------------------------------------------------------------------
UW0219  MEDIAN LOCAL ACCURACY AND DIST (016 points)   8.27  17.93     73.85
UW0219  ----------------------------------------------------------------------
```

And the lna_ret output for UW0219

```
UW0219  Type/PID  Horz  Ellip  Dist(km)   StdN   StdE   Stdh         CorrNE
UW0219  ------------------------------------------------------------------
UW0219  NETWORK   8.26 17.93      0.00    2.48   3.89   9.15    +0.26232390
UW0219  ------------------------------------------------------------------
```

It was found that the datasheet output was the one that was incorrect due to using the atoi() function to convert a string to an integer versus correctly using the atof() function to convert the string to a double for the network_correlation_coefficient variable which is one of the parameters needed to calculate Horiz via the leenhout_check() function.

datasheet95 as of this release has now been corrected to display 8.26 for the Horiz value as shown below:

```
UW0219  FGDC Geospatial Positioning Accuracy Standards (95% confidence, cm)
UW0219  Type                                          Horiz  Ellip  Dist(km)
UW0219  ----------------------------------------------------------------------
UW0219  NETWORK                                        8.26  17.93
UW0219  ----------------------------------------------------------------------
UW0219  MEDIAN LOCAL ACCURACY AND DIST (016 points)   8.27  17.93     73.85
UW0219  ----------------------------------------------------------------------
```

(2) While not an issue at present, the geoid_abbreviation variable was changed from eight characters in length to nine characters in length in the ret_gh_srce_def.c function. Nine characters were needed – eight for the data and one for the null character. This was a potential problem we could have run into later on in the code.

Version 7.89.1 released at 4:38am on 07/13/2012

This release fixes the issue of superseded heights outside of the dynamic regions/subsidence areas not appearing in the SUPERSEDED SURVEY CONTROL section of the datasheet.

An example of the incorrect output was for PID DF9871.

```
DF9871                  SUPERSEDED SURVEY CONTROL
DF9871
DF9871.No superseded survey control is available for this station.
DF9871
```

This has now been corrected to be:

```
DF9871                  SUPERSEDED SURVEY CONTROL
DF9871
DF9871  NAVD 88 (04/20/07)  287.043  (m)        941.74   (f) SUPERSEDED  2 1
DF9871  NAVD 88 (02/25/04)  287.011  (m)        941.64   (f) SUPERSEDED  2 1
DF9871
```

Version 7.89 released at 3:46pm on 07/12/2012

This release covers the changes requested for the Gulf dynamic regions/subsidence areas. In completing this release, some of the flags/conditions that turned on and off messages were not quite what the document stated. Therefore the actual flags/conditions for the messages requested will be included in the below. First we have some definitions to go through.

A dynamic region/subsidence area is an area known or suspected of subsidence, uplift, or other tectonic vertical motion. In 2005, there was a single dynamic region in the state of LA that was defined with a *latitude/longitude polygon*. In 2007 the LA dynamic region polygon was put aside in favor of defining the dynamic regions in the state of LA with a series of *three minimum/maximum latitude/longitude areas*. As of 2012 (this release) the dynamic regions now spans the lower parts of Gulf Coast states of AL, FL, MS, and LA and is comprised of several *minimum/maximum latitude/longitude areas*.

These regions are comprised of the following sub-areas shown in Table 1.

Table 1: Dynamic Regions/Subsidence Areas of the Gulf Coast

State	Latitude Range	Longitude Range
LA	latitude ≤ N303432	longitude ≥ W0912738
LA	latitude ≤ N304850	W0903401 ≤ longitude ≤ W0912738
LA	latitude ≤ N310002	longitude ≤ W0903401
MS	latitude ≤ N320608	W0882650 ≤ longitude ≤ W0910952
AL	latitude ≤ N312344	longitude ≥ W0880000
FL	N301743 ≤ latitude ≤ N303716	longitude ≥ W0870744

In a dynamic region/subsidence area, datasheets are publicly publishable for control points in specific projects (a.k.a. adjustment identifiers). If a control point is not part of these specific projects, then a public datasheet also includes the reason that the elevation for this control point should not be used in project as shown in the datasheet for AU2715 below.

AU2715
AU2715  HORZ ORDER      -  FIRST
AU2715  VERT ORDER      -  FIRST     CLASS II (See Below)
AU2715  ELLP ORDER      -  FOURTH    CLASS II
AU2715
AU2715.The horizontal coordinates were established by GPS observations
AU2715.and adjusted by the National Geodetic Survey in January 1993.
AU2715
AU2715 ** This station is in an area of known vertical motion.  If an
AU2715 ** orthometric height was ever established but is not available
AU2715 ** in the current survey control section, the orthometric height
AU2715 ** is considered suspect.  Suspect heights are available in the
AU2715 ** superseded section only if requested.
AU2715
AU2715.The vertical order pertains to the NGVD 29 superseded value.
AU2715
AU2715.The X, Y, and Z were computed from the position and the ellipsoidal ht.
AU2715
AU2715.The Laplace correction was computed from DEFLEC09 derived deflections.
AU2715
AU2715.The ellipsoidal height was determined by GPS observations
AU2715.and is referenced to NAD 83.
AU2715
AU2715.The modeled gravity was interpolated from observed gravity values.
AU2715
AU2715. The following values were computed from the NAD 83(1992) position.
AU2715

AU2715                          STATION DESCRIPTION
AU2715
AU2715'DESCRIBED BY LA DEPT OF HIGHWAYS 1972 (RT)
AU2715'THE STATION IS LOCATED 3 MILES NORTHEAST OF DOWNTOWN NEW ORLEANS, 5
AU2715'MILES NORTH OF GRETNA AND 8 MILES EAST OF KENNER, IN THE SOUTHEAST
AU2715'QUARTER OF SECTION 24, T12S, R11E, AND ON THE PROPERTY OWNED BY
AU2715'ORLEANS PARISH WATER BOARD.
AU2715'
AU2715'TO REACH THE STATION FROM THE INTERSECTION OF NORTH BROAD STREET AND
AU2715'TULANE AVENUE IN DOWNTOWN NEW ORLEANS, GO NORTHEAST ALONG NORTH
AU2715'BROAD STREET FOR 2.3 MILES TO PUMPING STATION NO. 3 ON THE LEFT AND
AU2715'NORTHWEST OF THE STREET.  THE STATION IS SET TO THE SOUTH OF
AU2715'THE PUMPING STATION NEAR A CLEAN-OUT RAMP ON A CANAL.
AU2715'
AU2715'THE STATION MARK IS A STANDARD LOUISIANA DEPARTMENT OF HIGHWAYS AND
AU2715'U. S. COAST AND GEODETIC SURVEY DISK SET IN A DRILL HOLE IN A
AU2715'CONCRETE SLAB CLEAN-OUT RAMP ON A CANAL, FLUSH WITH THE SLAB.  IT
AU2715'IS STAMPED BLOUNT 1972.  IT IS 74 FEET NORTH OF A POWER POLE, 58
AU2715'FEET WEST OF THE CENTER OF THE SOUTH BOUND LANE ON NORTH BROAD
AU2715'STREET, 43 FEET WEST OF A METAL DRAIN, 42 FEET NORTHWEST OF A
AU2715'SIGNAL LIGHT STANDARD, 39 FEET EAST OF THE NORTHEAST CORNER OF
AU2715'A METAL BUILDING, 2 FEET NORTH OF A METAL WITNESS POST AND SIGN, AND
AU2715'1 FOOT EAST OF THE WEST END OF A CONVEYOR FOR CLEAN-OUT ON CANAL.
AU2715'
AU2715'REFERENCE MARK 1 IS A STANDARD LOUISIANA DEPARTMENT OF HIGHWAYS AND
AU2715'U. S. COAST AND GEODETIC SURVEY DISK SET IN A DRILL HOLE IN THE
AU2715'SOUTHWEST CORNER OF A CONCRETE BASE FOR CONVEYOR, FLUSH WITH
AU2715'CONCRETE, 4 FEET ABOVE GROUND.  IT IS STAMPED BLOUND R.M. 1 1972.  IT
AU2715'IS 71 FEET WEST-SOUTHWEST OF THE CENTER OF THE SOUTH BOUND LANE OF
AU2715'NORTH BROAD STREET, 24 FEET NORTH-NORTHEAST OF THE NORTHEAST
AU2715'CORNER OF A METAL BUILDING, 21 FEET EAST-SOUTHEAST OF A CANAL
AU2715'CLEAN-OUT PLATFORM, AND 14 FEET NORTHWEST OF AN ELECTRIC CONTROL
AU2715'PANEL.
AU2715'
AU2715'REFERENCE MARK 2 IS A STANDARD LOUISIANA DEPARTMENT OF HIGHWAYS AND
AU2715'U. S. COAST AND GEODETIC SURVEY DISK SET IN A DRILL HOLD IN A
AU2715'CONCRETE SLAB FOR A CLEAN-OUT FOR CANAL, FLUSH WITH THE CONCRETE
AU2715'SLAB.  IT IS STAMPED BLOUNT R.M. 2 1972.  IT IS 80 FEET NORTH OF A
AU2715'POWER POLE, 33 FEET NORTH-NORTHWEST OF A SIGNAL LIGHT STANDARD, 32
```

AU2715'FEET WEST OF THE CENTER OF THE SOUTH BOUND LANE ON NORTH BROAD
AU2715'STREET, 18 FEET NORTH OF A METAL DRAIN, AND 1.5 FEET WEST OF THE EAST
AU2715'END OF A CONVEYOR ON A CLEAN-OUT FOR A CANAL.
AU2715'
AU2715'HEIGHT OF LIGHT ABOVE STATION MARK 1 METERS.
AU2715
AU2715 STATION RECOVERY (1972)
AU2715
AU2715'RECOVERY NOTE BY LA DEPT OF HIGHWAYS 1972
AU2715'RECOVERED IN GOOD CONDITION.
AU2715
AU2715 STATION RECOVERY (1988)
AU2715
AU2715'RECOVERY NOTE BY LA TRANSP AND DEV 1988
AU2715'THE STATION IS LOCATED 4.8 KM (3.00 MI) NORTHEAST OF DOWNTOWN NEW
AU2715'ORLEANS, 8 KM (4.95 MI) NORTH OF GRETNA AND 12.8 KM (7.95 MI) EAST OF
AU2715'KENNER, IN THE SOUTHEAST QUARTER OF SECTION 24, T 12 S, R 11 E.
AU2715'OWNERSHIP--ORLEANS PARISH WATER BOARD.
AU2715'TO REACH THE STATION FROM THE INTERSECTION OF NORTH BROAD STREET AND
AU2715'TULANE AVENUE IN DOWNTOWN NEW ORLEANS, GO NORTHEAST ALONG NORTH BROAD
AU2715'STREET FOR 3.7 KM (2.30 MI) TO PUMPING STATION NO. 3 ON THE LEFT AND
AU2715'NORTHWEST OF THE STREET. THE STATION IS SET TO THE SOUTH OF THE
AU2715'PUMPING STATION NEAR A CLEAN-OUT RAMP ON A CANAL.
AU2715'THE STATION MARK IS A STANDARD LOUISIANA DEPARTMENT OF HIGHWAYS AND U.
AU2715'S. COAST AND GEODETIC SURVEY DISK SET IN A DRILL HOLE IN A CONCRETE
AU2715'SLAB FLUSH WITH THE SURFACE OF THE RAMP 22.6 M (74.1 FT) NORTH OF A
AU2715'POWER POLE, 17.7 M (58.1 FT) WEST OF THE CENTER OF THE SOUTH BOUND
AU2715'LANE OF NORTH BROAD STREET, 13.1 M (43.0 FT) WEST OF A METAL DRAIN,
AU2715'12.8 M (42.0 FT) NORTHWEST OF A SIGNAL LIGHT STANDARD, 11.9 M
AU2715'(39.0 FT) EAST OF THE NORTHEAST CORNER OF A METAL BUILDING, 0.6 M
AU2715'(2.0 FT) NORTH OF A METAL WITNESS POST AND SIGN AND 0.3 M (1.0 FT)
AU2715'EAST OF THE WEST END OF A CONVEYER FOR CLEAN-OUT ON THE CANAL.

```

Control points in a dynamic region/subsidence area are publicly publishable if:

(3) The control point is in the Gulf Coast dynamic regions/subsidence areas (Table 1) ***and*** the control point is a list of publishable project/state combinations in the dynamic regions/subsidence areas (Table 3).

(4) The control point is in the Gulf Coast dynamic regions/subsidence areas (Table 1) ***and*** the control point itself is designated as being publicly publishable in the normally unpublishable region due to being constrained (i.e. must appear in a list of publishable UIDs for the region found in Table 4).

Below is a complete list of projects (a.k.a. ADJ_IDs) and their epochs that are in the Gulf Coast dynamic regions/subsidence areas:

Table 2: List of Publishable Projects in the Gulf Coast Dynamic Regions/Subsidence Areas

00000729/1	2009.55
00000729/2	2009.55
00000730/1	2009.55
00000730/2	2009.55
00000730/3	2009.55
00000730/4	2009.55
00000731	2009.55
00000732	2009.55
GPS2329	2006.81
GPS2100	2004.65
GPS2021/C	2004.65
GPS2212	2004.65
GPS2287	2004.65
GPS2307	2004.65
GPS2262	2004.65

Table 3 consists of a list of publishable project/state combinations in the dynamic regions/subsidence areas that generate a publicly publishable datasheet:

Table 3: Valid Project/State Combinations in the Dynamic Regions/Subsidence Areas

Project	State
00000729/1	AL
00000729/1	FL
00000729/1	LA
00000729/1	MS
00000729/1	TX
00000729/2	AL
00000729/2	MS
00000730/1	AL
00000730/2	AL
00000730/3	AL
00000730/4	AL
00000731	FL
00000732	TX
GPS2329	LA

*In the near future, control points in the state of LA and in project GPS2772 will be added to the list above.

Below is a list of control points (by their individual UID and PID) designated as publicly publishable regardless of the fact that they are in the dynamic regions/subsidence areas. These control points were constrained (held constant):

Table 4: Specific Control Points publishable in the Dynamic Regions/Subsidence Areas

UID	PID
10478369	BH1210
10478372	BH1213
11634989	DL9666
11634990	DL9667
10478371	BH1212
10484553	BG1724

Control points not in a publishable project/state combination (Table 3) or not exceptions to the rule by UID (Table 4), will generate a datasheet with "NOT PUB" in the CURRENT SURVEY CONTROL section. This includes control points in past project/state combinations that formerly generated a publishable datasheet if the control point was in one of them. A list of these formerly valid project/state combinations appears is Table 5 below.

Table 5: Past HT_MOD Projects in Louisiana that formerly generated a publishable datasheet if the control point was in one of them

Project	State
GPS2100	LA
GPS2021/C	LA
GPS2212	LA
GPS2307	LA
GPS2262	LA

An example datasheet with "NOT PUB" on the ORTHO HEIGHT line for a control point in project GPS2100 and in the state of LA is shown below:

```

BJ1655
BJ1655
BJ1655.The horizontal coordinates were established by GPS observations
BJ1655.and adjusted by the National Geodetic Survey in February 2007.
BJ1655
BJ1655.The datum tag of NAD 83(2007) is equivalent to NAD 83(NSRS2007).
BJ1655.See www.ngs.noaa.gov/NationalReadjustment for more information.
BJ1655
BJ1655.The horizontal coordinates are valid at the epoch date displayed above
BJ1655.which is a decimal equivalence of Year/Month/Day.
BJ1655
BJ1655 ** This station is in an area of known vertical motion.  If an
BJ1655 ** orthometric height was ever established but is not available
BJ1655 ** in the current survey control section, the orthometric height
BJ1655 ** is considered suspect.  Suspect heights are available in the
BJ1655 ** superseded section only if requested.
BJ1655
BJ1655.The vertical order pertains to the NGVD 29 superseded value.
BJ1655
BJ1655.The X, Y, and Z were computed from the position and the ellipsoidal ht.
BJ1655
BJ1655.The Laplace correction was computed from DEFLEC09 derived deflections.
BJ1655
BJ1655.The ellipsoidal height was determined by GPS observations
BJ1655.and is referenced to NAD 83.
BJ1655
BJ1655.The modeled gravity was interpolated from observed gravity values.
BJ1655
BJ1655. The following values were computed from the NAD 83(2007) position.
BJ1655

```

There are several new messages (paragraphs) that are new in datasheet95 V7.89.

In the CURRENT SURVEY CONTROL section of the datasheet the message:

```
<pid> ** This station is in an area of known vertical motion.  Due to the
<pid> ** variability of land subsidence, uplift, and crustal motion, NGS has
<pid> ** determined the orthometric heights for marks in these suspect
<pid> ** subsidence areas should be considered valid only at the epoch date
<pid> ** associated with the orthometric height.  These heights must always
<pid> ** be validated when used as control.  All previously superseded
<pid> ** orthometric heights are now considered suspect and are available
<pid> ** in the superseded section.  NGS does not recommend using suspect
<pid> ** or superseded heights as control.
<pid>
```

will be displayed if the control point is in the dynamic regions/subsidence areas (Table 1) and a control point is publishable in this area because it appears in either Table 3 or Table 4.

An example PID with this message on the datasheet is BH0673:

```

BH0673
BH0673
BH0673.The horizontal coordinates were established by GPS observations
BH0673.and adjusted by the National Geodetic Survey in June 2012.
BH0673
BH0673.NAD 83(2011) refers to NAD 83 coordinates where the reference
BH0673.frame has been affixed to the stable North American tectonic plate. See
BH0673.www.ngs.noaa.gov/web/surveys/NA2011 for more information.
BH0673
BH0673.The horizontal coordinates are valid at the epoch date displayed above
BH0673.which is a decimal equivalence of Year/Month/Day.
BH0673
BH0673 ** This station is in an area of known vertical motion.  Due to the
BH0673 ** variability of land subsidence, uplift, and crustal motion, NGS has,
BH0673 ** determined the orthometric heights for marks in these suspect
BH0673 ** subsidence areas should be considered valid only at the epoch date
BH0673 ** associated with the orthometric height.  These heights must always
BH0673 ** be validated when used as control.  All previously superseded
BH0673 ** orthometric heights are now considered suspect and are available
BH0673 ** in the superseded section.  NGS does not recommend using suspect
BH0673 ** or superseded heights as control.
```

If the control point is in the dynamic regions/subsidence areas (Table 1) and the control point is not publishable in this area because it does not appears in either Table 3 or Table 4 but the user checked the checkbox “Included suspect heights in subsidence areas” as shown in Figure 1, then the following message is displayed:

```
<pid> ** This station is in an area of known vertical motion.  If no
<pid> ** orthometric height is shown in the current survey control section,
<pid> ** all orthometric heights are considered suspect and are only
<pid> ** available in the superseded section if suspect heights were
<pid> ** requested.
<pid>
```

If the control point is in the dynamic regions/subsidence areas (Table 1) and the control point is not publishable in this area because it does not appears in either Table 3 or Table 4 and the user

does not check the checkbox “Included suspect heights in subsidence areas” as shown in Figure 1, then the following message is displayed:

```
<pid> ** This station is in an area of known vertical motion.  If an
<pid> ** orthometric height was ever established but is not available
<pid> ** in the current survey control section, the orthometric height
<pid> ** is considered suspect.  Suspect heights are available in the
<pid> ** superseded section only if requested.
<pid>
```

An example PID that produces this message on a datasheet is BH3030:

```

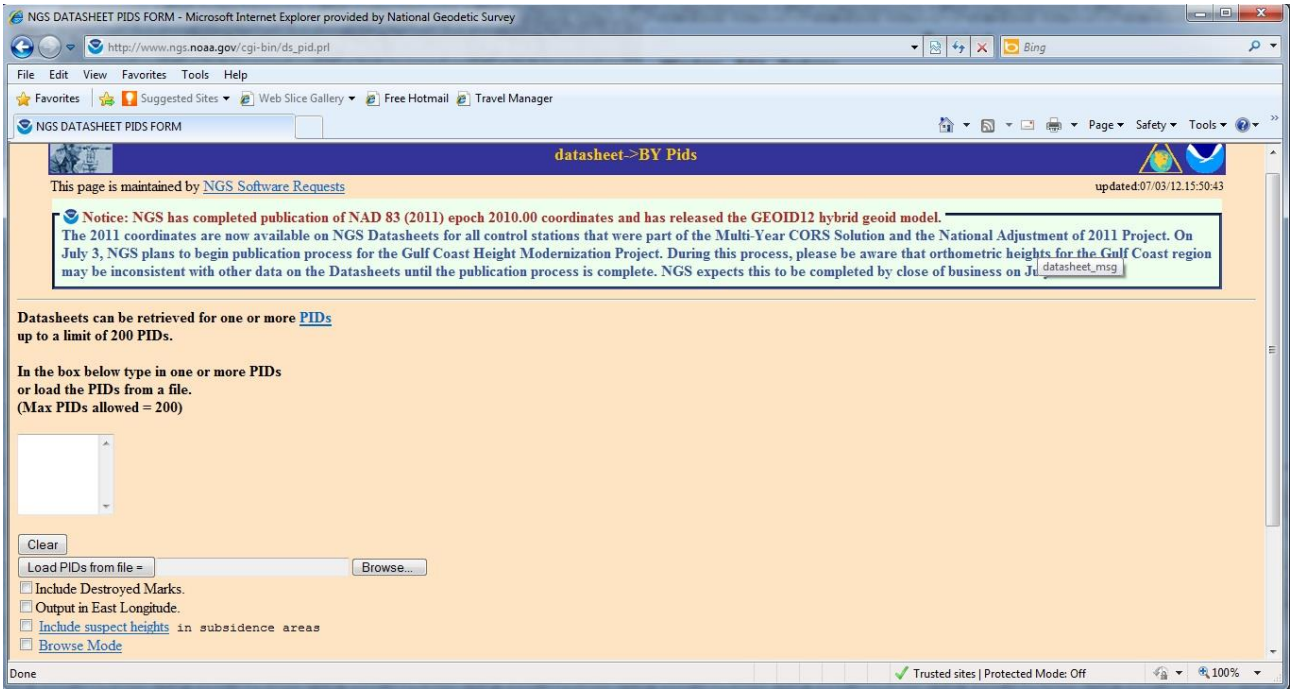
Another change made in datasheet95 V7.89 in the SUPERSEDED SURVEY CONTROL section of the datasheet is how superseded heights get published/not published. A superseded height is publishable in this section if:

(1) The control point is in a dynamic region/subsidence area (Table 1) and the control point is publishable in this area because it appears in either Table 3 or Table 4.

(2) The control point is in a dynamic region/subsidence area (Table 1) and the user requested to see the suspect heights by checking the box labeled “Include suspect heights in subsidence areas” as show in Figure 1 below.

Figure 1: Checkbox for users to select whether or not they want to see suspect heights in a subsidence area



An example PID that generates a datasheet with publishable superseded heights because of condition #1 above is BJ3209:

```
BJ3209                          SUPERSEDED SURVEY CONTROL

BH3030  ELLIP H (04/15/02)   -7.652  (m)                       GP(       ) 4 2
BH3030  NAD 83(1993)-  30 36 54.97869(N)    088 55 20.53558(W) AD(       ) B
BH3030  ELLIP H (02/15/02)   -7.657  (m)                       GP(       ) 4 1
BH3030  NAVD 88 (02/15/02)   21.03   (m)           69.0    (f) LEVELING    3
BH3030  NAVD 88 (05/22/96)   21.034  (m)           69.01   (f) ADJUSTED    2 2
```

If the user did not check this checkbox, then they would not see the superseded heights in the SUPERSEDED SURVEY CONTROL section of the datasheets (see below):

```
BH3030                          SUPERSEDED SURVEY CONTROL
BH3030
BH3030  NAD 83(2007)-  30 36 54.97870(N)    088 55 20.53572(W) AD(       ) 0
BH3030  ELLIP H (02/10/07)   -7.623  (m)                       GP(       )
BH3030  ELLIP H (04/15/02)   -7.652  (m)                       GP(       ) 4 2
BH3030  NAD 83(1993)-  30 36 54.97869(N)    088 55 20.53558(W) AD(       ) B
BH3030  ELLIP H (02/15/02)   -7.657  (m)                       GP(       ) 4 1
```

Datasheet95 V7.89 also includes a new message in the SUPERSEDED SURVEY CONTROL section of the datasheets. The below message:

```
<pid> ** No published orthometric height exists and therefore all are
<pid> ** considered suspect. This station did not take part in a recent
<pid> ** survey which established orthometric heights in the area.  Therefore,
<pid> ** any previously published orthometric heights have not been validated.
<pid> ** NGS does not recommend using suspect or superseded heights as control
<pid> ** unless they can be validated or a new NAVD88 height established.
<pid> ** If this station were to take part in a new project and submitted
<pid> ** to NGS a new height could be published.
```

appears in this section whenever three conditions are true:

(1) the control point is in a dynamic region/subsidence area (Table 1)
(2) The control point is ***not*** publishable in the dynamic regions/subsidence areas by project/state combination (Table 3) or by UID (Table 4).
(3) The user checked the checkbox in "Include suspect heights in subsidence areas" as shown in Figure 1.

An example PID that produces this message on a datasheet is BH3030 (assumes that the user checked the checkbox mentioned in Figure 1):

```
BH3030                          SUPERSEDED SURVEY CONTROL

BH3030 ** to NGS a new height could be published.
```

Version 7.88.4 released at 3:38pm on 07/03/2012

This release incorporates the datasheet changes needed to release the new GEOID12 model on datasheets. In addition, there are some minor updates to the datasheet code to make sure that the dtm_tag of PA11 come out (versus 2011) on the datasheets whenever we have a passive mark in the Northern Mariana Islands (CQ), and MA11 whenever we have a passive mark in American Samoa (AS), or Hawaii (HI).

Test 1: Make sure that the geoid model, GEOID12, comes out properly on datasheets.

```

Version 7.88.3 released at 9:49am on 06/06/2012

This release makes EGM08 as the primary GEOID model for the Caribbean, Mexico, and the non-US World. **There were no changes in the deflections that coincided with EGM08 at this time.**

The datasheet that stirred this request was for AB9264.

```
AB9264  LMSL orthometric height was determined with geoid model       EGM96
AB9264  GEOID HEIGHT    -        -26.08  (meters)                     EGM96
AB9264  GEOID HEIGHT    -        -24.15  (meters)                     CARIB97
AB9264  NAD 83(2007) X  -  2,238,773.938 (meters)                     COMP
AB9264  NAD 83(2007) Y  - -5,819,521.182 (meters)                     COMP
AB9264  NAD 83(2007) Z  -  1,337,705.718 (meters)                     COMP
AB9264  LAPLACE CORR    -         -0.62  (seconds)                    DCAR97
```

Now that EGM08 is in place with this release one will see the following datasheet for AB9264:

```
AB9264  LMSL orthometric height was determined with geoid model       EGM96
AB9264  GEOID HEIGHT    -        -26.08  (meters)                     EGM96
AB9264  GEOID HEIGHT    -        -24.40  (meters)                     EGM08
AB9264  NAD 83(2007) X  -  2,238,773.938 (meters)                     COMP
AB9264  NAD 83(2007) Y  - -5,819,521.182 (meters)                     COMP
AB9264  NAD 83(2007) Z  -  1,337,705.718 (meters)                     COMP
AB9264  LAPLACE CORR    -         -0.62  (seconds)                    DCAR97
```

Version 7.88.2 released at 9:35am on 06/05/2012

This release simply removes the line below highlighted in red for any mark that has ITRF positions.

```

```

This mark is in the Channel Islands in the county of LA in the state of California. Its SPC zone should be 6 and not 5. This is a special case scenario.

Finally, this release resolves the issue reported about the geoid height model, RAPP078, coming out on the two lines highlighted in red below.

Version 7.88.1 released at 12:02pm on 05/04/2012

This minor release corrected the datasheet95 scan_idb by_stream command line option so that in-house NGS users could extract multiple datasheets within a single command. The program was giving zero results on this option.

Test Command: datasheet95 scan_idb by_stream X-0-0-0-0-0 "AC6803+UA0024"

```

 AC6803
 AC6803
 AC6803.This mark is at Colorado City Municipal Airport (AZC)
 AC6803
 AC6803.The horizontal coordinates were established by GPS observations
 AC6803.and adjusted by the National Geodetic Survey in February 2007.
 AC6803
 AC6803.The datum tag of NAD 83(2007) is equivalent to NAD 83(NSRS2007).
 AC6803.See www.ngs.noaa.gov/web/surveys/NSRS2007 for more information.
 AC6803
 AC6803.The horizontal coordinates are valid at the epoch date displayed above
 AC6803.which is a decimal equivalence of Year/Month/Day.
 AC6803
 AC6803.The orthometric height was determined by GPS observations and a
 AC6803.high-resolution geoid model.
 AC6803
 AC6803.GPS derived orthometric heights for airport stations designated as
 AC6803.PACS or SACS are published to 2 decimal places.  This maintains
 AC6803.centimeter relative accuracy between the PACS and SACS.  It does
 AC6803.not indicate centimeter accuracy relative to other marks which are
```

```
AC6803.part of the NAVD 88 network.
AC6803
AC6803.The X, Y, and Z were computed from the position and the ellipsoidal ht.
AC6803
AC6803.The Laplace correction was computed from DEFLEC09 derived deflections.
AC6803
AC6803.The ellipsoidal height was determined by GPS observations
AC6803.and is referenced to NAD 83.
AC6803
AC6803. The following values were computed from the NAD 83(2007) position.

AC6803                           STATION DESCRIPTION
AC6803
AC6803'DESCRIBED BY JE CHANCE AND ASSOCIATES 1996 (SDC)
AC6803'THE STATION IS LOCATED APPROXIMATELY 6.5 KM (4.05 MI) SOUTHWEST OF THE
AC6803'TOWN OF COLORADO CITY AT THE COLORADO CITY MUNICIPAL AIRPORT.
AC6803'OWNERSHIP -- TOWN OF COLORADO CITY, LADELL BISTLINE - AIRPORT MANAGER,
AC6803'PHONE (520) 875-2308 TO REACH THE STATION FROM MILEPOST 1.4 OF STATE
```

AC6803'HIGHWAY 389 NEAR COLORADO CITY AT THE JUNCTION WITH A PAVED ROAD,
AC6803'PROCEED WEST ON THE PAVED ROAD FOR 1.3 KM (0.80 MI) , SOUTH FOR 2.4 KM
AC6803'(1.50 MI) , THEN WEST FOR 0.8 KM (0.50 MI) TO THE AIRPORT TERMINAL AND
AC6803'GATE. PROCEED THROUGH GATE AND CONTINUE WESTERLY ACROSS APRON AND
AC6803'TAXIWAY FOR 0.15 KM (0.10 MI) TO THE JUNCTION WITH RUNWAY 2-20. TURN
AC6803'RIGHT AND GO NORTH-NORTHEAST ALONG RUNWAY 2-20 FOR 0.65 KM (0.40 MI)
AC6803'TO THE END OF THE RUNWAY AND THE STATION ON THE LEFT THE STATION IS
AC6803'THE TOP CENTER OF A STAINLESS STEEL ROD DRIVEN TO REFUSAL AT A DEPTH
AC6803'OF 20.60 M (67.59 FT) RECESSED 12 CM BELOW GROUND LEVEL IN A 2.5 CM
AC6803'DIA GREASE FILLED FINNED PLASTIC SLEEVE 90 CM LONG ENCASED IN A 12.7
AC6803'CM DIA PVC PIPE WITH NGS LOGO CAP SURROUNDED BY CONCRETE. THE LOGO
AC6803'CAP AND CONCRETE ARE SET FLUSH WITH THE GROUND. THE STATION IS LOCATED
AC6803'7.30 M (23.95 FT) SOUTHEAST OF A FENCE, 62.00 M (203.41 FT)
AC6803'NORTH-NORTHWEST OF THE NORTHWEST CORNER OF THE APPROACH END OF RUNWAY
AC6803'20, 57.60 M (188.98 FT) NORTH-NORTHWEST OF THE NORTHWESTERNMOST
AC6803'THRESHOLD LIGHT, 43.85 M (143.86 FT) NORTHEAST OF A STEEL FENCE POST
AC6803'SUPPORT THAT IS IN LINE WITH A NORTHWESTERLY EXTENSION OF THE NORTHERN
AC6803'EDGE OF RUNWAY 20, 109.2 M (358.3 FT) SOUTH-SOUTHWEST OF THE
AC6803'NORTHWESTERN FENCE CORNER, AND 0.9 M (3.0 FT) SOUTHEAST OF A CARSONITE
AC6803'WITNESS POST THE STATION IS DESIGNATED AS A PRIMARY AIRPORT CONTROL
AC6803'STATION (PACS) - ARIZONA ANA SURVEYS 1996
AC6803
AC6803   STATION RECOVERY (1997)
AC6803
AC6803'RECOVERY NOTE BY NATIONAL GEODETIC SURVEY 1997 (AJL)
AC6803'THE STATION IS LOCATED ABOUT 5.0 KM (3.10 MI) SOUTHWEST OF COLORADO
AC6803'CITY AT THE COLORADO CITY MUNICIPAL AIRPORT, ALONG THE WEST SIDE OF
AC6803'AND NEAR THE NORTH END OF RUNWAY 2-20. OWNERSHIP--CITY OF COLORADO
AC6803'CITY, LADELL BISTLINE, AIRPORT MANAGER, BOX 70, COLORADO CITY, AZ
AC6803'86021. THE PHONE NUMBER IS (520) 875-2646. TO REACH THE STATION FROM
AC6803'THE JUNCTION OF STATE HIGHWAY 389 AND THE ARIZONA/UTAH STATE LINE, GO
AC6803'SOUTHEASTERLY FOR 2.2 KM (1.35 MI) ON THE HIGHWAY TO A PAVED ROAD
AC6803'RIGHT. TURN RIGHT AND GO WEST THEN SOUTH ON MOHAVE AVENUE THEN
AC6803'REDWOOD STREET (THERE ARE NO STREET SIGNS) FOR 3.7 KM (2.30 MI) TO A
AC6803'PAVED ROAD RIGHT. TURN RIGHT AND GO WEST THEN SOUTH FOR 0.9 KM (0.55
AC6803'MI) ON AIRPORT AVENUE (THERE IS NO STREET SIGN) TO A LOCKED GATE AND
AC6803'THE AIRPORT ADMINISTRATIVE BUILDING (UNATTENDED) ON THE RIGHT. PASS
AC6803'THROUGH THE LOCKED GATE AND GO NORTHWEST FOR 0.2 KM (0.10 MI) ACROSS A
AC6803'RAMP AND ALONG A TAXIWAY TO RUNWAY 2-20. TURN RIGHT AND GO NORTHEAST
AC6803'FOR 0.6 KM (0.35 MI) ALONG THE RUNWAY TO THE STATION ON THE LEFT JUST
AC6803'PAST RUNWAY END 20. THE STATION IS LOCATED 61.9 M (203.1 FT)
AC6803'NORTH-NORTHWEST OF THE NORTHWEST CORNER OF THE RUNWAY, 53.6 M (175.9
AC6803'FT) NORTHWEST OF THE EXTENDED CENTER OF THE RUNWAY, 7.3 M (24.0 FT)
AC6803'SOUTHEAST OF A FENCE LINE, 0.9 M (3.0 FT) SOUTHEAST OF A CARSONITE
AC6803'WITNESS POST, AND THE MONUMENT IS FLUSH WITH THE GROUND SURFACE.
AC6803'NOTE--AIRPORT IS UNATTENDED. A PHILLIPS SCREW DRIVER IS REQUIRED TO
AC6803'ACCESS THE DATUM POINT THROUGH THE LOGO CAP. THIS STATION SELECTED AS
AC6803'THE PACS FOR THIS AIRPORT.
AC6803
AC6803   STATION RECOVERY (2008)
AC6803
AC6803'RECOVERY NOTE BY GEODETIC ANALYSIS LLC 2008 (MLD)
AC6803'RECOVERED AS DESCRIBED. ADDITIONAL INFORMATION FOLLOWS.
AC6803'
AC6803'OWNERSHIP--TOWN OF COLORADO CITY P.O. BOX 70, COLORADO CITY, ARIZONA
AC6803'86021, PHONE 928-875-2646.
AC6803'
AC6803'NOTE--ACCESS TO AIRPORT IS THROUGH AN ELECTRIC GATE THAT REQUIRES A
AC6803'SECURITY CODE TO OPEN. AIRPORT MANAGER IS LADELL BISTLINE, BOX 726,
AC6803'COLORADO CITY, ARIZONA 86021, PHONE 928-875-2871. AIRPORT MANAGER
AC6803'HOME PHONE IS 928-875-2308 AND CELL PHONE IS 435-616-2871.
AC6803'
AC6803'NOTE--A DIMPLE WAS DRILLED INTO THE TOP OF THE ROD TO ACCEPT THE TIP

```
 AC6803'OF A FIXED HEIGHT POLE.

 UA0024
 UA0024
 UA0024.The horizontal coordinates were established by GPS observations
 UA0024.and adjusted by the National Geodetic Survey in February 2007.
 UA0024
 UA0024.The datum tag of NAD 83(2007) is equivalent to NAD 83(NSRS2007).
 UA0024.See www.ngs.noaa.gov/web/surveys/NSRS2007 for more information.
 UA0024
 UA0024.The horizontal coordinates are valid at the epoch date displayed above
 UA0024.which is a decimal equivalence of Year/Month/Day.
 UA0024
 UA0024.The orthometric height was determined by differential leveling and
 UA0024.adjusted in April 2010.
 UA0024
 UA0024.Photographs are available for this station.
 UA0024
 UA0024.The X, Y, and Z were computed from the position and the ellipsoidal ht.
 UA0024
 UA0024.The Laplace correction was computed from DEFLEC09 derived deflections.
 UA0024
 UA0024.The ellipsoidal height was determined by GPS observations
 UA0024.and is referenced to NAD 83.
 UA0024
 UA0024.The dynamic height is computed by dividing the NAVD 88
 UA0024.geopotential number by the normal gravity value computed on the
 UA0024.Geodetic Reference System of 1980 (GRS 80) ellipsoid at 45
 UA0024.degrees latitude (g = 980.6199 gals.).
```

```
UA0024
UA0024.The modeled gravity was interpolated from observed gravity values.
UA0024
UA0024. The following values were computed from the NAD 83(2007) position.
UA0024
UA0024;                    North         East     Units Scale Factor Converg.

UA0024                          STATION DESCRIPTION
UA0024
UA0024'DESCRIBED BY COAST AND GEODETIC SURVEY 1907 (OBF)
UA0024'JEFFERSON PIER IS A CONCRETE POST ABOUT NW OF THE WASHINGTON
UA0024'MONUMENT, VERY NEARLY IN THE LATITUDE OF THE CAPITOL DOME AND THE
UA0024'LONGTITUDE OF THE WHITE HOUSE.
UA0024
UA0024                          STATION RECOVERY (1907)
UA0024
UA0024'RECOVERY NOTE BY COAST AND GEODETIC SURVEY 1907
UA0024'RECOVERED IN GOOD CONDITION.
UA0024
UA0024                          STATION RECOVERY (1940)
UA0024
UA0024'RECOVERY NOTE BY COAST AND GEODETIC SURVEY 1940 (TMP)
UA0024'THIS STATION WAS RECOVERED.  THIS STATION IS LOCATED ON THE W
UA0024'SLOPE OF THE MOUND OF THE WASHINGTON MONUMENT, AND IS IN LINE
UA0024'WITH 16TH STREET EXTENDED, AND IN APPROXIMATE RANGE WITH THE
UA0024'N SIDE OF THE LINCOLN MEMORIAL.  IT IS IN A DEPRESSION ABOUT 8
UA0024'INCHES BELOW THE LINCOLN MEMORIAL.  IT IS IN A DEPRESSION ABOUT
UA0024'8 INCHES BELOW THE GENERAL GROUND SURFACE AND ABOUT 15 FEET IN
UA0024'DIAMETER.  THE MARK IS ABOUT 2 FEET SQUARE AT BASE AND ABOUT 6
UA0024'INCHES SQUARE AT TOP AND EXTENDS ABOUT 2 FEET ABOVE GROUND.
UA0024'
UA0024'THIS MARK IS SAID TO HAVE BEEN RAISED FROM TIME TO TIME AS WORK
UA0024'WAS DONE ON THE MONUMENT GROUNDS, BUT THE POSITION OF THE
UA0024'STATION IS SUPPOSED TO HAVE BEEN HELD EACH TIME.
UA0024
UA0024                          STATION RECOVERY (1993)
UA0024
UA0024'RECOVERY NOTE BY NATIONAL GEODETIC SURVEY 1993
UA0024'THE STATION IS LOCATED IN WASHINGTON, D.C., ON THE WASHINGTON MONUMENT
UA0024'GROUNDS AT THE JEFFERSON PIER STONE WHICH LIES ON A LINE EXTENDING
UA0024'BETWEEN THE WHITE HOUSE AND THE JEFFERSON MEMORIAL. OWNERSHIP--UNITED
UA0024'STATES DEPARTMENT OF THE INTERIOR, NATIONAL PARK SERVICE.  CONTACT
UA0024'THE NATIONAL PARK SERVICE, TELEPHONE NUMBER (202) 485-9880.
UA0024'THE STATION IS A BRASS PLUG WITH A PUNCH MARK, SET IN THE CENTER OF A
UA0024'RECESSED CROSS IN THE TOP OF A 2 BY 2-FOOT GRANITE MONUMENT WHICH IS
UA0024'INSCRIBED POSITION OF JEFFERSON PIER ERECTED DECEMBER 18, 1804,
UA0024'RECOVERED AND RE-ERECTED DECEMBER 2, 1889, DISTRICT OF COLUMBIA AND
UA0024'PROJECTS 26 INCHES ABOVE THE GROUND.
UA0024'LOCATED 110 M (360.9 FT) WEST-NORTHWEST OF THE WASHINGTON MONUMENT AND
UA0024'13.0 M (42.7 FT) SOUTH OF THE SOUTH EDGE OF A 15-FOOT WIDE CONCRETE
UA0024'WALKWAY.
UA0024'NOTE--PERMISSION MUST BE OBTAINED FROM THE NATIONAL PARK SERVICE TO
UA0024'OCCUPY THIS STATION.

Version 7.88 released at 12:27pm on 05/01/2012

This release will incorporate the following updates:

(a)	This release is to enact the format changes as specified on the datasheet95 mockups of AC6803 and UA0024, and the requirements within the document https://source.ngs.noaa.gov/svn/repos/NGSIDBAPI/RetrievalApi/datasheet/docs/V7.87.7/descriptive_announcement.docx. This release includes the local and network accuracies link if a mark/station has local or network accuracies associated with it.
(b)	In regard to Southern Louisiana, if a mark has a superseded orthometric height that was in one of the HT_MOD projects, GPS2100, GPS2021/C, GPS2212, GPS2287, or GPS2262, then the HT_MOD epoch of 2004.65 appears in the SUPERSEDED SURVEY CONTROL section of the datasheet like: DH3818 SUPERSEDED SURVEY CONTROL DH3818 DH3818 ELLIP H (02/10/07) -17.075 (m) GP( ) DH3818 NAD 83(1992)- 30 13 14.83688(N) 092 03 15.88117(W) AD(2004.65) B DH3818 ELLIP H (06/22/05) -17.076 (m) GP(2004.65) 4 1 DH3818 NAVD 88 (06/22/05) 10.25 (m) GEOID03 model used GP(**2004.65**) Additionally, if a mark has a superseded orthometric height that was in the HT_MOD project, GPS2329, then the HT_MOD epoch of 2006.81 appears in the SUPERSEDED SURVEY CONTROL section of the datasheet like: BK0189 SUPERSEDED SURVEY CONTROL BK0189 BK0189 ELLIP H (03/12/08) -17.854 (m) GP(2006.81) 3 1 BK0189 NAVD 88 (03/12/08) 9.44 (m) GEOID03 model used GP(**2006.81**) BK0189 NAVD 88 (02/14/94) 9.706 (m) 31.84 (f) SUPERSEDED 1 1 BK0189 NAVD 88 (06/15/91) 9.705 (m) 31.84 (f) SUPERSEDED 1 1 BK0189 NGVD 29 (??/??/??) 9.688 (m) 31.78 (f) ADJUSTED 1 1 Note: Currently the NGSIDB does not have any superseded orthometric heights for marks in project GPS2329. Thus we used BK0189 as a test case in the test database and added an elevation record so that we could make sure this case worked later on for the eventual superseding of marks in project GPS2329. 1> select * from ELEVATION where UID=10477285 2> go UID HEIGHT ELEV_SOURCE ELEV_QUALITY DATUM ERR_DIST OBS_DATE REDUNDANCY ELEV_TECH ELEV_AVAIL ADJ_ID S_ORDER CLASS HEIGHT_STD_DEV

(d)	This release uses the leenhout_check function that the Chief Geodesist provided to calculate: (1) The Horz and Ellip values on a datasheet and on the local and network accuracy report (via the lna_ret.w program). (2) The CorrNE on the local and network accuracy report (via the lna_ret.w program).
(e)	This release uses the updated compute_dist algorithm from the Chief Geodesist to calculate the distance between the network and local accuracies on the datasheets and local and network accuracy report (via the lna_ret program).
(f)	As of 3/20/2012 the PPC asked for an update of the LNA note on datasheets with LNAs. They stated: **Change NOTE as follows -** **NOTE: Click here for information on individual local accuracy values and other accuracy information.** *here* **needs to be hyper-linked as it is now.**
(g)	This release encompasses the Change Request dated 3/28/2012 by OAD.: (1) For a mark in NSRS2007 display the following paragraph/link: AC6803.The datum tag of NAD 83(2007) is equivalent to NAD 83(NSRS2007). AC6803.See NSRS2007 for more information. (2) For a mark in NA2011 display the following paragraph/link: DW9002.NAD 83(2011) refers to NAD 83 coordinates where the reference DW9002.frame has been affixed to the stable North American Tectonic Plate. See DW9002.NA2011 for more information. If the geoid height line comes out currently with CURRENT GEOID HT or GEOIDXX HEIGHT where XX is the geoid model (i.e. 03, 09), then make it display now like the following (with the GEOID model at the end of the line): DW9002 GEOID HEIGHT - -32.49 (meters) GEOID99 DW9002 GEOID HEIGHT - -32.54 (meters) GEOID09 (3) For bench marks, don't display the following line: <PID> NOTE: <orthometric height datum abbreviation> orthometric height was determined with geoid model <geoid model>
(h)	This release updates the geoid model used in datasheet95 for the states of PR and VQ to match the latest geoid model used for these states in the intg program (and its associated grid files). Dan Roman specified that no changes to the deflection (i.e. intd grid file updates) are needed as they have not changed yet. The geoid model used for PR and VQ is **GEOID09**. Note: The [geoid] grid files are part of the Geodetic Toolkit.

(i)	As of the 3/12/2012 PPC meeting, if a local accuracy control point is associated with the network control point is part of an FAA project survey, then its data is to be *excluded from the summary information* on the datasheet95.w report for the network and local accuracies.

Please note that for the **COUNTRY** label on datasheets, if the country is the United States of America it will be abbreviated "US" and not "USA" (as requested on the AC6803 and UA0024 datasheet mockups) as this is the FIPS value for it in the database.

Version 7.87.6.1 released at 11:59am on 05/01/2012

This release updates the geoid model used in datasheet95 for the states of PR and VQ to match the latest geoid model used for these states in the intg program (and its associated grid files). No changes to the deflection (i.e. intd grid file updates) are needed as they have not changed.

Test Case #1: test the PID of TV0381 (a passive mark) in the state of PR (Puerto Rico).

```

Version 7.87.6 released at 3:21pm on 04/09/2012

This is to fix the algorithm that determines the best elevation for a passive mark. If we have more than one height mod height and one does not have observations – to be able to choose the best height, use the adjusted dates to determine which height to publish. The one with the latest date is the winner.

Examples: CY0606

UID	HEIGHT	ELEV_SOURCE	DATUM	ELEV_TECH	ELEV_AVAIL	ADJ_ID	ADJ_DATE	OBS_DATE
10263098	1281.8231	A	88	N	U	00000025	19910615	null
10263098	1281.702	H	88	G	U	GPS2160	20050822	20041105
10263098	1281.732	H	88	G	U	GPS2846	20120104	null

GPS2846 project was a readjustment for a HT_MOD station using old observations and hence only the adjusted heights were loaded. No new observations were loaded for this height.
The current algorithm would compare the observation date of GPS2160 with the observation date of GPS2846 and pick GPS2160 as the best height.

The fix is to use the adjusted date of "20120104" for comparison when there are no observations for a HT_MOD project.

Version 7.87.5 released at 3:14pm on 01/25/2012

This release is to:

1	Implement a simplified retrieval/generation of the dtm_tag field that appears on the NAD 83 line of a datasheet as per the PPC meeting of July 28, 2011. We no longer needed to have a routine to generate the dtm_tag differently for high precision states. We could generate the dtm_tag from the REG_ADJ_TAG.EPOCH field. Also, she said that regions that have been adjusted multiple times such as North Carolina-South Carolina, Wisconsin, and Florida, only need to get their *last* regional adjustment. Thus the code was simplified greatly to remove the complexity of this code. This was done by updating the REG_ADJ_TAG table (shown later in this document) as well as some routines to retrieve this data that are transparent to the user.
2	Remove the hard-coding for CORS realizations and create database tables that will house the old and new realization codes for the US states/territories. The default CORS realizations are housed in the *new* CORS_REALIZATION_TAG table and any CORS realization for a state that is to override the default realizations are housed in the *new* CORS_STATE_REALIZATION_TAG table. Any specific message that appears on a datasheet for these realizations can also be found in these tables.
3	Whenever the datum and realization are "NAD 83(CORS)" on the datasheet, display the message "*The datum tag of NAD 83(CORS) is equivalent to NAD 83(CORS96).*" on the datasheet. This message is housed in the CORS_REALIZATION_TAG table for the REALIZATION="CORS96". Note: There are two other statements missing from this request that were not included and should have been and even the above request needs a bit of clarification. • If the realization on the PV_RET output is CORS96, then the message "*The datum tag of NAD 83(CORS) is equivalent to NAD 83(CORS96).*" should appear on the datasheet. • If the realization on the PV_RET output is MARP00, then the message "*The datum tag of NAD 83(CORS) is equivalent to NAD 83(MARP00).*" should appear on the datasheet. • If the realization on the PV_RET output is PACP00, then the message "*The datum tag of NAD 83(CORS) is equivalent to NAD 83(PACP00).*" should appear on the datasheet. For CORS sites that are not part of the NAD 83 (2011) adjustment the following statement were added. Example: AF9698 AF9698 *CURRENT SURVEY CONTROL AF9698 _____ AF9698* NAD 83(CORS)- 33 23 23.28607(N) 115 47 16.85288(W) ADJUSTED AF9698* NAVD 88 - -48.4 (meters) -159. (feet) GPS OBS AF9698 _____ AF9698 **AF9698.The datum tag of NAD 83(CORS) is equivalent to NAD 83(CORS96).** AF9698

	For Guam (example: DF7984) the following line will be added for CORS sites that are not part of the NAD 83 (2011) adjustment. DF7984.The datum tag of NAD 83(CORS) is equivalent to NAD 83(MARP00) **For Hawaii (example: AJ8468) the following line will be added for CORS sites that are not part of the NAD 83 (2011) adjustment.** AJ8468.The datum tag of NAD 83(CORS) is equivalent to NAD 83(PACP00)
4	As per the meeting of August 2, 2011 at 10AM with the CORS team, make sure that the new realization of (MA11) includes not only the Northern Mariana Islands (CQ) but also Guam (GU), and that the new realization of (PA11) includes Hawaii (HI), American Samoa (AS) and also Marshall Islands (ML). The CORS team had *left out GU and ML* from his initial "Requirements for Datasheet95 to reflect new NAD 83 realizations (High)" it was found that they also meant to put these two states into the document as well. **To test the NAD 83 (2011) realization for CORS the following configuration was setup in TEST. Any CORS coordinates loaded after 08/16/2011 will be treated as NAD 83(2011) for testing purposes. Example PIDs: KS1340, AA3921** 1> SELECT START_DATE, END_DATE, REALIZATION, DATASHEET_REALIZATION FROM CORS_REALIZATION_TAG 2> GO START_DATE END_DATE REALIZATION DATASHEET_REALIZATION ---------- -------- ----------- --------------------- 18000101 20110815 CORS96 CORS **20110816** 30990101 2011 2011 **In production this will be adjusted to reflect the actual date the CORS coordinates are loaded which would be sometime in 2012.** **New:** KS1340 *CURRENT SURVEY CONTROL KS1340 ___ KS1340* NAD 83(2011)- 39 58 28.38081(N) 120 56 39.88943(W) ADJUSTED KS1340* NAVD 88 - 1130.197 (meters) 3707.99 (feet) ADJUSTED KS1340 ___ KS1340 KS1340.NAD 83(2011) refers to NAD 83 coordinates where the reference KS1340.frame has been affixed to the stable North American Tectonic Plate. KS1340 Data in the database tables shows that the coordinates were loaded on 10/24/2011. PID UID LATITUDE LONGITUDE ADJ_ID ADJ_DATE LOAD_DATE ------ ----------- ------------- -------------- ------------- -------- ----- ---- AF9564 11553323 N395828.37710 W1205639.88522 CORS0003 199609 19980722 AF9564 11553323 N395828.37731 W1205639.88553 CORS0097 199807

AA4397
5	All work done thus far on the local accuracies/the distance algorithm is incorporated into this code so as not to lose this valuable work, even though local accuracies are not to be displayed at this time on datasheets. Local accuracy output can be displayed if <compilearg value="-DLOCACC" /> is placed in the build.xml file that builds the datasheet95.w program. Local accuracy data will not display on the 7.87.5 datasheets.
6	All messages requested for the new realizations *are ready to go for the upcoming NSRS 2011 data as well as the new CORS data to be loaded at a future date*. The messages are: • "NAD 83(2011) refers to NAD 83 coordinates where the reference frame has been affixed to the stable North American Tectonic Plate." for all passive and CORS stations in CONUS, Alaska (AK), Puerto Rico (PR), and the US Virgin Islands (VQ).

	• "NAD 83(MA11) refers to NAD 83 coordinates where the reference frame has been affixed to the stable Mariana Tectonic Plate." for all CORS stations in Guam (GU) and the Northern Mariana Islands (CQ). • "NAD 83(PA11) refers to NAD 83 coordinates where the reference frame has been affixed to the stable Pacific Tectonic Plate." for all CORS stations in American Samoa (AS), Hawaii (HI), and Marshall Islands (ML).
7	The definition for "LT" in the V_DATUM_DEF table was changed from "LOCAL TIDAL" to "LMSL" (i.e. Local Mean Sea Level). Example LOCAL TIDAL will be replaced with LMSL. Example PIDs: TV1539, AA3601, TV1053 New: TV1539 *CURRENT SURVEY CONTROL TV1539 _____ TV1539* NAD 83(2007)- 18 19 42.37949(N) 064 51 32.93057(W) ADJUSTED TV1539* LMSL - 168.8 (meters) 554. 9	In conjuction with this datasheet95.w 7.87.5 release, the chk_pub.w, get_mark_list.w, get_radius_list.w, sup_marks.w, and pv_ret.w programs were recompiled with the new code and released as well.

The following tables have been added into the database.

CORS_REALIZATION_DEF table – tells what the possible CORS_REALIZATION_IDs (locals) are.

CORS_REALIZATION_ID	DEFINITION
MA	MARIANA TECTONIC PLATE
NA	NORTH AMERICAN TECTONIC PLATE
PA	PACIFIC TECTONIC PLATE

DATUM_ORIGIN_POINT table – tells us what UIDs are datum origin points and tells us what messages to print out on the datasheet whenever someone requests a PID associated with these UIDs. This is a new table in the database.

UID	DATUM	DATASHEET_MESSAGE	DATASHEET_MESSAGE_CONT
10209294	GU	This bench mark was chosen by the National Geodetic Survey to serve as the Datum Origin Point for the Guam Vertical Datum of 2004 (GUVD04).	The GUVD04 height for this point was defined by NGS to be exactly 0.419 meters which is identical to the MSL height of this bench mark for Tidal Epoch 1983-2001 as determined by CO-OPS in April 2003.
11420395	88	""	""
11515212	PR	This bench mark was chosen by the National Geodetic Survey to serve as the Datum Origin Point for the Puerto Rico Vertical Datum of 2002 (PRVD02).	The PRVD02 height for this point was defined by NGS to be exactly 1.334 meters which is identical to the MSL height of this bench mark for Tidal Epoch 1960-1978 as determined by CO-OPS in November 2002.
11580446	AS	This bench mark was chosen by the National Geodetic Survey to serve as the Datum Origin Point for the American Samoa Vertical Datum of 2002 (ASVD02).	The ASVD02 height for this point was defined by NGS to be exactly 1.364 meters which is identical to the MSL height of this bench mark for Tidal Epoch 1983-2001 as determined by CO-OPS in April 2003.
11588189	NM	This bench mark was chosen by the National Geodetic Survey to serve as the Datum Origin Point for the Northern Marianas Vertical Datum of 2003 (NMVD03).	The NMVD03 height for this point was defined by NGS to be exactly 1.657 meters which is identical to the MSL height of this bench mark for Tidal Epoch 1983-2001 as determined by CO-OPS in April 2003.
11624102	VI	This bench mark was chosen by the National Geodetic Survey to serve as the Datum Origin Point for the Virgin Island Vertical Datum of 2009 (VIVD09) as realized on the island of St. Croix.	The VIVD09 height for this point was defined by NGS to be exactly 3.111 meters which is identical to the MSL height of this bench mark for Tidal Epoch 1983-2001 as determine by CO-OPS in April 2003.
11628959	VI	This bench mark was chosen by the National Geodetic Survey to serve as the Datum Origin Point for the Virgin Island Vertical Datum of 2009 (VIVD09) as realized on the island of St. John.	The VIVD09 height for this point was defined by NGS to be exactly 1.077 meters which is identical to the MSL height of this bench mark for Tidal Epoch 1983-2001 as determine by CO-OPS in April 2003.
11629231	VI	This bench mark was chosen by the National Geodetic Survey to serve as the Datum Origin Point for the Virgin Island Vertical Datum of 2009 (VIVD09) as realized on the island of St. Thomas.	The VIVD09 height for this point was defined by NGS to be exactly 1.552 meters which is identical to the MSL height of this bench mark for Tidal Epoch 1983-2001 as determine by CO-OPS in April 2003.

The following tables have been modified in the database. Changes are shown in purple.

CORS_REALIZATION_TAG table – holds CORS realization tags and the message to be displayed on the datasheet within specified time frames. This is a new table in the database.

START_ DATE	END_ DATE	REALIZATION	DATASHEET_ REALIZATION	DATASHEET_MESSAGE
18000101	20110805	MARP00	CORS	The datum tag of NAD 83(CORS) is equivalent to NAD 83(MARP00)
20110806	20990101	MA11	MA11	NAD 83(MA11) refers to NAD 83 coordinates where the reference frame has been affixed to the stable Mariana Tectonic Plate.
18000101	20110805	MARP00	CORS	The datum tag of NAD 83(CORS) is equivalent to NAD 83(CORS96).
20110806	20990101	2011	2011	NAD 83(2011) refers to NAD 83 coordinates where the reference frame has been affixed to the stable North American Tectonic Plate.
18000101	20110805	PACP00	CORS	The datum tag of NAD 83(CORS) is equivalent to NAD 83(PACP00)
20110806	20990101	PA11	PA11	NAD 83(PA11) refers to NAD 83 coordinates where the reference frame has been affixed to the stable Pacific Tectonic Plate.

GH_SRCE_DEF table – new field of ABBREV was added. The values in this new column was previously hard-coded in the datasheet program.

GEOID_SOURCE	DEFINITION	ABBREVIATION
1	USGG2009	USGG2009
2	GEOID09	GEOID09
B	OSU89B	OSU 89B
C	GEOID90	GEOID90

Y	GEOID06	GEOID06
Z	USGG2006	USGG2006

H_DATUM_DEF table – new fields of ABBREVIATION and ITRF_FLAG were added. The ABBREV values in this table were previously hard-coded in the datasheet program and the ITRF_FLAG column was added so that the CORS_RET program could tell what DATUMs were ITRF datums and which one's weren't with a simple flag.

*Note: For a *CORS station* you have to make the STATES.CORS_REALIZATION_ID equal to ”NA”, “PA”, or “MA” if you want it to appear on the NAD 83 line of datasheets (i.e. (2011))!

V_DATUM_DEF table – new column of ABBREV was added here to get this into the database and out of hard-code in the datasheet95.w program. The values in the ABBREV column were also shortened from 8 characters to 13 characters to keep the datasheet output in alignment with the new upcoming formatting changes in the near future.

V_DATUM_DEF table – new field of ABBREVIATION was added.

DATUM	DEFINITION	ABBREVIATION
00	UNDETERMINED	UNDT
29	NATIONAL GEODETIC VERTICAL DATUM OF 1929	NGVD 29

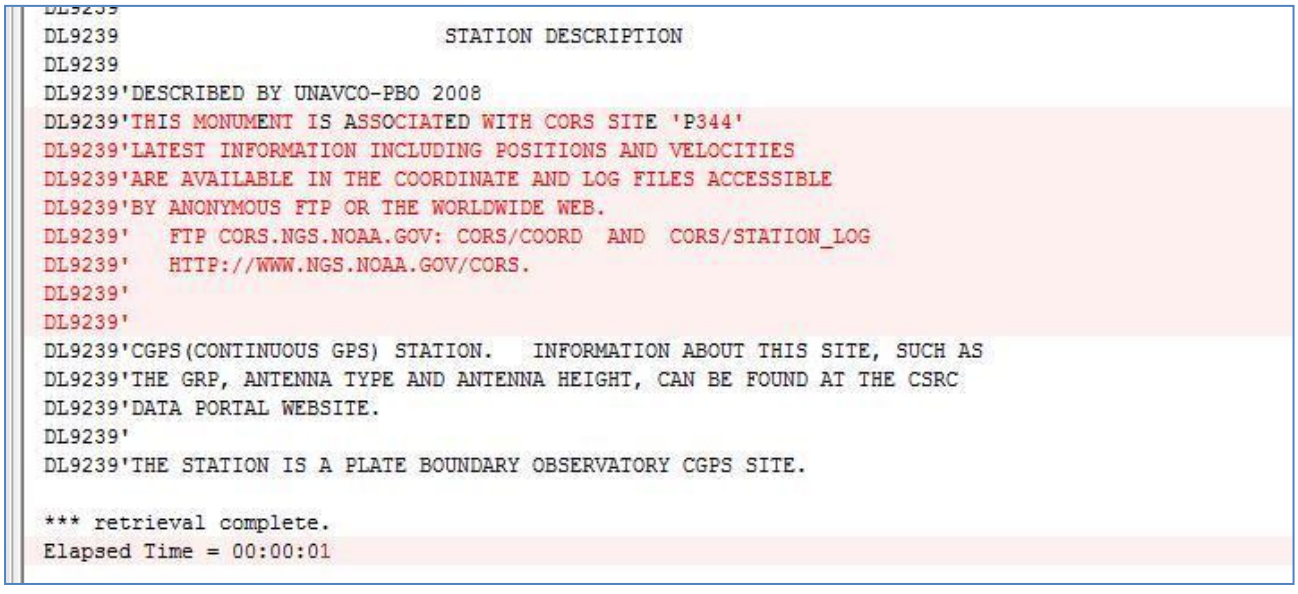
VI	VIRGIN ISLANDS VERTICAL DATUM OF 2009	VIVD09

Version 7.87.4.2 released at 10:48am on 01/25/2012

This is a patch release to fix the issue with “excess” descriptive text coming out onto CORS datasheets whenever the CORS type is a monument (i.e. cors_type=’M’). CORS monuments are also considered to be passive monuments and all passive monuments must (according to OAD) have descriptive text associated with them in the TEXT table. The problem is that CORS datasheets should display only the standard CORS paragraph (i.e. starting with “THIS MONUMENT IS ASSOCIATED WITH CORS SITE…”) and not also the descriptive text on the datasheets.

In the sample below for mark DL9239, the datasheet should print out the text beginning with “THIS MONUMENT IS ASSOCIATED WITH CORS SITE…” but not the text “CGPS(CONTINUOUS GPS) STATION… PLATE BOUNDARY OBSERVATORY CGPS SITE.” which is the descriptive text loaded in for this (passive) monument.

This is also a patch release to fix a problem introduced by the implementation of the code that was using fork() and then wait() to run a command (i.e. a system call to run the chk_pub program within datasheet95) and then wait() for completion. waitpid()is used instead of wait() to resolve the issue of a wait() that never sees the return of its child process, the system call to chk_pub, but rather sees the return of the other child process first, the Oracle DBAuthentication child.



```

Version 7.87.4.1 released at 7:43pm on 10/05/2011

This is a patch release to fix a problem introduced by the implementation of the DBAuthentication module. The code was using fork and then wait to run a command and wait for completion. Wait system call randomly waits for a child process to be complete. Since DBAuthentication launches a child process the code was coming out of the wait when the Oracle process exited. Waitpid should be used instead of wait. Also there was no real need to use fork/wait. A direct call to the "system" function would have sufficed.

Version 7.87.4 released at 12:01pm on 08/01/2011

This release is to implement the new database authentication process for NGS Applications for datasheet95.

Version 7.87.3 released at 3:29pm on 07/11/2011

This release implements the following changes:

Part 1a: Add horizontal datum abbreviations to the H_DATUM_DEF table and modifying the program so that the addition of any *historical* horizontal datum to the H_DATUM_DEF table will not require the datasheet95 program to be recompiled (unless some other field/text needs to be added/updated for some odd reason).

The abbreviations for all of the horizontal datums were added to the H_DATUM_DEF table to make it so that the datasheet95 program no longer needs a hardcoded value for the horizontal datum abbreviation and thus, in combination with updating the code to use this table, any future addition of a *historical* horizontal datum to the H_DATUM_DEF table will no longer require the datasheet95 program to have to be recompiled to accommodate it (unless additional things like new paragraphs/text or other fields need to be modified on the datasheets).

The H_DATUM_DEF table now appears as such:

```
1> select * from H_DATUM_DEF
2> go

Part 1b: Extract hardcoded state categories (i.e. African States, Asian States, Caribbean States, Central American States, CONUS States, European States, Pacific Island States, South American States, US [non-territory] States) from the code and put them into the NGSIDB.STATES table. To accomplish this, several SQL scripts were written to create new columns in the STATES table as well as the routines to retrieve them from the STATES table. All routines using the former hardcoded states now use the updated modules that extract the states from the STATE table.

The following are the states considered to be African states:

```
1> select STATE from STATES where AFRICA_FLAG="Y"
2> go
STATE
-----
AF  AI  AO  AQ  BE  BG  CF  DN  EG  ET  FG  KO  LI  MU  OU  PL  SD  SF  SO
SU  TZ  UG  ZA  ZO
```

The following are the states considered to be Asian states:

```
1> select STATE from STATES where ASIA_FLAG="Y"
2> go
STATE
-----
CH  CW  DI  IZ  JA  NP  RP  SA  TW  UR
```

The following are the states considered to be Caribbean states:

```
1> select STATE from STATES where CARIBBEAN_FLAG="Y"
2> go
STATE
-----
AA  AC  AV  BB  BF  BQ  CJ  CP  CU  DO  DR  GJ  GP  GY  HA  JM  MH  MR  NT
PR  SJ  SN  ST  TD  TK  VC  VI  VQ
```

The following are the states considered to be Central American states:

```
1> select STATE from STATES where CENTRAL_AMERICA_FLAG="Y"
2> go
STATE
-----
AD  AG  AH  AN  AT  BA  BH  BN  BO  BS  BV  CC  CE  CG  CH  CK  CL  CM  CN
CR  CS  CV  CX  CY  CZ  DF  DU  EL  EN  EP  ER  ES  FR  GB  GD  GE  GN  GR
GT  HD  HL  HO  HU  HV  IB  II  JI  JL  JU  LE  LL  LM  LN  LP  LT  LU  LZ
MC  MF  MG  MJ  MP  MX  MY  MZ  NA  NI  NL  NU  OC  OL  OX  PN  PT  PU  QA
QI  QR  QT  QU  RE  RN  RS  RV  RZ  SB  SE  SG  SI  SL  SM  SP  SQ  SS  SV
SX  SY  SZ  TB  TL  TM  TO  UN  VL  VX  YO  YU  ZC  ZP
```

The following are the states considered to be CONUS states:

```
1> select STATE from STATES where CONUS_FLAG="Y"
2> go
STATE
-----
AL  AR  AZ  CA  CO  CT  DC  DE  FL  GA  IA  ID  IL  IN  KS  KY  LA  MA  MD
ME  MI  MN  MO  MS  MT  NC  ND  NE  NH  NJ  NM  NV  NY  OH  OK  OR  PA  RI
SC  SD  TN  TX  UT  VA  VT  WA  WI  WV  WY
```

The following are the states considered to be European states:

```
1> select STATE from STATES where EUROPE_FLAG="Y"
2> go
STATE
-----
DA  FI  FN  GL  GM  IC  IT  NO  RO  SW  UK  WG
```

The following are the states considered to be Pacific Island states:

```
1> select STATE from STATES where PACIFIC_ISLAND_FLAG="Y"
2> go
STATE
-----
CQ  FM  GU  JQ  ML  MQ  PW  TQ  UM  WQ
```

The following are the states considered to be South American states:

```
1> select STATE from STATES where SOUTH_AMERICA_FLAG=”Y”
2> go
STATE
-----
AJ  BL  BR  CB  CI  EC  PY  SR  UY  VE
```

Part 1c: Extract the hard coded state codes from the routines that get all the states for specific countries (i.e. Canada, El Salvador, Honduras, Guatemala, and Mexico) and get them instead from the STATES table. To accomplish this, several SQL scripts were to extract the data from the STATES table by country and a new routine was also written to allow the retrieval of any country’s states if given the COUNTRY_FIPs code.

The states of Canada, using the new stored procedure, are:

```
1> RET_STATES_BY_COUNTRY "CA"
2> go
 STATE
 -----
 AB  BC  CD  MB  NB  NF  NN  NS  NW  ON  PE  PQ  SK  YK
```

The states of El Salvador, using the new stored procedure, are:

```
1> RET_STATES_BY_COUNTRY "ES"
2> go
STATE
-----
AH  CS  ES  HL  LL  LN  LP  LU  RN  SE  SM  SS  SV  SX  UN
```

The states of Guatemala, using the new stored procedure, are:

```
1> RET_STATES_BY_COUNTRY "GT"
2> go
STATE
-----
BV  EN  EP  GE  GT  HU  HV  JU  LT  PT  QI  QT  QU  RE  SG  SP  SQ  SY  SZ
TO  ZP
```

The states of Honduras, using the new stored procedure, are:

```
1> RET_STATES_BY_COUNTRY "HO"
2> go
STATE
-----
AD  BA  CE  CK  CV  CX  CY  ER  FR  GD  HO  IB  II  LM  LZ  OC  OL  VX  YO
```

The states of Mexico, using the new stored procedure, are:

```
1> RET_STATES_BY_COUNTRY "MX"
2> go
STATE
-----
AG  BN  BS  CC  CH  CL  CM  CZ  DF  DU  GB  GR  HD  JL  MC  MF  MJ  MX  NA
NL  OX  PU  QA  QR  SB  SI  SL  TB  TL  TM  VL  YU  ZC
```

Part 2: There is a bug where a handheld position should have been displayed on the NAD 83 line in the SURVEY CONTROL section of the datasheets but a scaled position was displayed instead. This situation occurred only whenever the ADJ_DATE was NULL on both of these positions. We later found that there were six marks in the NGSIDB.POSITION table that were adjusted positions that had an ADJ_DATE of NULL (i.e. DL3531, DL3555, DL3535, DL3559, DL3538, DL3562), as well as eight marks in the NGSIDB.POSITION table that were superseded positions that had an ADJ_DATE of NULL (i.e. AQ1393, FB2921, DF9366, DF9367, DF9369, DF93769, DF9370, DF9371). This has been corrected.

Version 7.87.2 released at 2:52pm on 07/11/2011

The SPC coordinates for certain marks is not displaying the millionth digit. Example PID: AY0031. This release will fix the issue by increasing the width of the display field. The following PIDS can be used for testing: AY0031, HW1096, KR1355, and LR0232.

Version 7.87.1 released at 1:35pm on 06/02/2011

This release implements the following changes:

Part 1: Handling Heights in the Southern Louisiana Subsidence Area in the SUPERSEDED SURVEY CONTROL Section of the Datasheets

datasheet95 V7.87 put superseded GPSed heights in the SUPERSEDED SURVEY CONTROL section of the datasheets. While this was the desired intent, there is a single exception to the rule. The only time you wouldn't put superseded GPSed heights, or any height in the SUPERSEDED SURVEY CONTROL section is if a mark is in the Southern Louisiana subsidence area and it is NOT in project GPS2329 then no superseded heights whatsoever (i.e. 88's or best 29) are supposed to appear in the superseded section of the datasheet for that mark. They will eventually appear when "suspect heights" are requested. Example PIDs to test are: BJ1212, BJ1655, BJ1758, DH3213, AT1436, AU3545, AB4041, AT1409, AU0076, and AU0295.

Part 2: Fixing the intg program which is called from the datasheet95 program so that the GEOID model information appears properly on datasheets running on the x86 machines. When running on the x86 machines an error is generated when computing the GEOID HEIGHT and LAPLACE COOR if the model is GEOID09. The problem is related to big/little endian conversion of binary data in the grid files. This only impacts the x96 servers. Example PIDs to test are AH5044, BJ1227, and DJ9357.

Version 7.87 released at 10:28am on 06/08/2011

This release implements the following changes to the version 7.86 code in the repository.

In the past it was NGS' opinion that GPS derived orthometric heights were not of a quality to be included in the superseded section of the datasheet. With the technological advancements and the implementation of height modification procedures there have been numerous requests from stakeholders to include the history GPS-derived orthometric heights.

Responding to stakeholder feedback, NGS will provide GPS derived superseded heights on the NGS Data Sheet. First, identify height mod and non-height mod GPS derived NAVD88 heights and second, provide these heights on the NGS datasheet.

The following changes were made to the data sheet layout for marks which have GPS derived heights superseded by newer heights. In the superseded section of the datasheet any NAVD88 GPS derived height are added. Besides having an ELEV_AVAIL of 'U' (i.e. Unrestricted) or 'X' (i.e. Submitting Agency is Responsible for Leveling Height and Field Data Verification), a GPS derived height has an ELEV_SOURCE of 'H' for HNB Elevation, an ELEV_TECH of 'G' for GPS, and a GPS_HT_PRECISION of:

0 – meaning a GPS height published to meter precision
1 - or NULL - for a PAC or SAC meaning a GPS height that is published to the nearest cm *
1 - or NULL, **not** for a PAC nor SAC meaning a GPS height should that is published to the nearest dm
2 – meaning a GPS that is published to the nearest cm

* Caveat: FAA GPS derived heights with GPS_HT_PRECISION of 1 or NULL will be published to the nearest cm.

NOTE: The GPS_HT_PRECISION table is generally not populated with code of 1 but rather it is the default value for all orthometric heights with an ELEV_SOURCE=H and ELEV_TECH and no other code in the table

Version 7.86 released at 1:31pm on 05/04/2011

- New states were added to the STATES table.

- Some reason codes were NEVER hit and were eliminated and in other instances, there were no reason codes (such as whenever a L1 Phase Center/antenna was destroyed/replaced/superseded) to explain why a mark/site/station was unpublishable. Thus, the never-hit reason codes were deleted and reason codes for cases that were not covered but should have been were added.
- Corrected the Field Height in software request #3204. In order to correct this, PPC members had to sit down and come up with all of the combinations of ELEV_SOURCE/ELEV_TECH/ELEV_AVAIL and if the combination was not allowed we had to come up with the reason (code/text) as to why it was not allowed.

  An example of a mark that is a field height that should not have been publicly publishable is DK7165.

- Added code to allow for the following historical horizontal datums codes to appear properly in the superseded section of the datasheets.

DATUM	DEFINITION
AN	ANCHORAGE PT ASTRO DATUM

then the output datum in the superseded section was set to 72 (i.e. WORLD GEODETIC SYSTEM OF 1972 (WGS72)) without any conversion of the latitude or longitude to a real 72 position. This was correct this so that positions with a datum of 27 in these states will no longer be set to a 72 in the SUPERSEDED SURVEY CONTROL section of the datasheet.

- No scaled position will be put into the superseded section any longer. Note: The only horizontal datums that have an associated scaled position in the database are 00, 83, 27, AS, GU, HI, and PR.

- Verified that at least one of each of the CORS categories is publicly publishable on datasheets. Some PIDs tested are in the table below:

CORS_CATEGORY	DEFINITION	PID	CORS SITE
1	NATIONAL	DE9144	ZTL4
2	CIGNET	AF9520	WES2
3	CALIFORNIA	DE6612	VNDP
4	COOPERATIVE	DE7967	WACO
8	OTHER	DE6580	HARV

- Verified that only Active CORS sites are publicly publishable stations on a datasheet. Some sample PIDs tested are in the table below:

SITE_STATUS	DEFINITION	PID	CORS SITE
A	ACTIVE	DE6356	ZOA2
D	INACTIVE	AH6080	SAV2

N	NON-PUBLISHABLE	DF8268	HGAD
P	PROPOSED	N/A	N/A

- Verified that only publishable/active L1 Phase Centers are publicly publishable marks/stations/sites on a datasheet.

  We have the following PUB types:

PUB	DEFINITION
N	NO DO NOT USE THIS FOR PUBLICATION
Y	YES USE THIS FOR PUBLICATION

- Corrected the issue of no datasheet information coming out (including the reason why the mark/station/site was not displayable/publishable) outside of the name of the program and the version number whenever the user typed in PIDs that were publicly unpublishable. As part of this correction, the reasons as to why a mark was publicly publishable/unpublishable horizontally, vertically and in combination were examined to find the cases that were falling through the cracks. Example (using the command line version of datasheet95):

```
datasheet95 CG1293
DATABASE =  ,PROGRAM = datasheet, VERSION = 7.85

 *** retrieval complete.
 Elapsed Time = 00:00:00
```

  You should now get:

```
datasheet95 CG1293
DATABASE =  ,PROGRAM = datasheet, VERSION = 7.86

 *** retrieval complete.
 Elapsed Time = 00:00:00

Version 6.85 on 09/11/2003

CHANGE #1: Add Superseded NAVD 88 heights to the Superseded section
CHANGE #2: Include Dates on Superseded elevations
CHANGE #3: Move the date on the Superseded Ellip Ht.
CHANGE #4: Shift the Superseded Ellip Ht value left two spaces.
CHANGE #5: Now publishing hand held GPS positions when available for benchmarks.

Before and after sample section for changes #1, #2, #3, #4:
