COAST AND GEOD. SURV. Potomac River Survey-1907

APR 16 11 25 AM '04 Sheet No. 3 -Descriptive Report.

The sheet herein described extends from Swan Creek to Oxon Run or the S.E. boundary of the District of Columbia.
FILE:
REFERRED:
ASSISTANT IN CH.

The principal feature of this area is the system of watersheds made by Broad Creek, the Potomac and Oxon Run which divide at the ridge on which Fort Foote stands, meeting there in a bluff eighty feet high. The Geological formation does not in any respect differ from that indicated for Sheets Nos 1 and 2. The ridge beginning at Fort Foote on the River extends by a long curve gradually receding to the North East until the water shed of Oxon Run is reached.

The conditions before noted for Sheet No. 1 are similar to those common to this Sheet.

John W. Dorn
Chief of Party
