DATE	May 12 - 1947

Descriptive Report

T-5913

This statement is submitted in lieu of the descriptive report for T-5913, which has been lost in the Washington Office.

The descriptive report will be forwarded to the vault for filing when found.

T-5913 is one of a series of planimetric maps compiled in the Tampa Photogrammetric Office. The manuscript was submitted to the Washington Office in September 1942, but the office processing was delayed because of war map work of the Bureau and was not completed until 1947.

Details regarding the field inspection, main radial plot, and manuscript delineation are stated in descriptive reports T-5912 and T-5914, which cover the adjoining maps.

T-5913 was reviewed in the Washington Office in December 1943. Only a few minor changes in the manuscript were made during the review and these are shown in red.
