Remarks:

5. With further reference to paragraph 1, the ground control was approximately identified on the photographs in this office from descriptions rather than the accepted method of field identification on the photographs, see pages 30 and 31 of "Notes on the Compilation of Planimetric Line Maps". This was necessary so that the shoreline and hydrographic signal points could be made available for this season's work (1943). Wherever possible, this ground control should be identified on the photographs in the field. Should the field identification of the control show a considerable error in the original office identification, this office should be notified so that the photo plot can be remade prior to plotting the hydrographic smooth sheets. The ground control for which field identification is desired are circled in red on the following ozalid copies and listed below:

Review - T-8536 thru T-8539

The preliminary shoreline maps shown on the attached index were radial plotted and the detail delineated in 1943 without field inspection of any kind, to furnish detail for small scale nautical charts and shoreline for hydrographic surveys.

Preliminary shoreline map T-8536 covers from Bechevin Bay to Big Lagoon, Alaska Peninsula, from Latitude $55^{\circ}-02'$ to $55^{\circ}-10'-30''$ and Longitude $163^{\circ}-08'$ to $163^{\circ}-29'$; T-8537 covers the vicinity of Izembek Bay, Alaska Peninsula, from Latitude $55^{\circ}-05'$ to $55^{\circ}-17'$ and Longitude $162^{\circ}-54'$ to $163^{\circ}-08'$, with an inset covering the area from Latitude $55^{\circ}-17'$ to $55^{\circ}-20'$ and Longitude $162^{\circ}-54'$ to $162^{\circ}-57'$; T-8538 covers the vicinity of Cold Bay, Alaska Peninsula, from Latitude $55^{\circ}-11'$ to $55^{\circ}-20'$ and Longitude $162^{\circ}-32'$ to $162^{\circ}-54'$; and T-8539 covers the vicinity of Moffet Bay, Alaska Peninsula, from Latitude $55^{\circ}-20'$ to $55^{\circ}-29'$ and Longitude $162^{\circ}-30'$ to $162^{\circ}-52'$, with an inset covering the area from Latitude $55^{\circ}-20'$ to $55^{\circ}-22'$ and Longitude $162^{\circ}-52'$ to $162^{\circ}-55'$.

A continuous radial plot was laid for sheets T-8536 through T-8539. It is not recommended that these sheets be used for large scale mapping without the usual field inspection.

H-6972 (1:20,000), covering the approach to Izembek Bay and the channel from Cape Glazenap to Grant Point, was compared with the common area on T-8537 and T-8538. No discrepancies were noted.

With reference to the descriptive report, use of these preliminary photogrammetric manuscripts in the field was limited to a reconnaissance hydrographic survey, H-6972, covering the south entrance to Izembek Bay. Two of the photogrammetric signals were used as a basis from which hydrographic signals were located by graphic control. The descriptive report for H-6972 states "A stadia check was obtained at a signal over an unmarked U.S.E. triangulation station in the area and showed close agreement". The review of H-6972 recommends that the area be completely resurveyed at such time as systematic surveys are undertaken. The field party did not obtain control identification or shoreline inspection for standard mapping of this area.

Data pertaining to T-8536, T-8537, T-8538 and T-8539 is filed as follows:

- A. Division of Photogrammetry General Files:
 1. Acetate Manuscripts
- B. Bureau Archives:
 1. A cloth-backed lithographic print of the reviewed maps at compilation scale.
 2. Registered original descriptive reports.
