10365 THRU 10379

Diag. Cht. No. 9302.

Form 504	
U. S. COAST AND GEODETIC SURVEY DEPARTMENT OF COMMERCE	
DESCRIPTIVE REPORT	
Type of Survey	Topographic
Field No.	Ph-56
Office No.	T-10379
LOCALITY	
State	Alaska
General locality	Nunivak Island
Locality	
19/ 50-51	
CHIEF OF PARTY	
M.J.Tonkel, Chief of Field Party	
E.H.Kirsch, Div. of Photo. Balto., Md.	
LIBRARY & ARCHIVES	
DATE	June 2, 1959.

DATA RECORD

T-10365 - T-10379, inclusive

Project No. (II): **Ph-56**                      Quadrangle Name (IV):

Field Office (II): **Portland, Oregon**

Chief of Party: **M. J. Tonkel**

Photogrammetric Office (III): **Baltimore, Maryland  
Washington, D. C.**

Officer-in-Charge: **E. H. Kirsch**

Instructions dated (II) (III):  
**2 April 1951  
14 December 1951  
21 December 1951**

Copy filed in Division of  
Photogrammetry (IV)

*Office Files*

Method of Compilation (III): **9 lens Reading plotter**

Manuscript Scale (III): **1:40,000**

Stereoscopic Plotting Instrument Scale (III): **1:20,000**

Scale Factor (III):

Date received in Washington Office (IV):

Date reported to Nautical Chart Branch (IV):

Applied to Chart No.

Date:

Date registered (IV): **21 May 1957**

Publication Scale (IV):

Publication date (IV):

Geographic Datum (III): **N.A. 1927 adj.**

Vertical Datum (III):

Mean sea level except as follows:  
Elevations shown as (25) refer to mean high water  
Elevations shown as (5) refer to sounding datum  
i.e., mean low water or mean lower low water

Reference Station (III):

Lat.:

Long.:

Adjusted  
~~Unadjusted~~

Plane Coordinates (IV):

**UTM**

State:

Zone: **3**

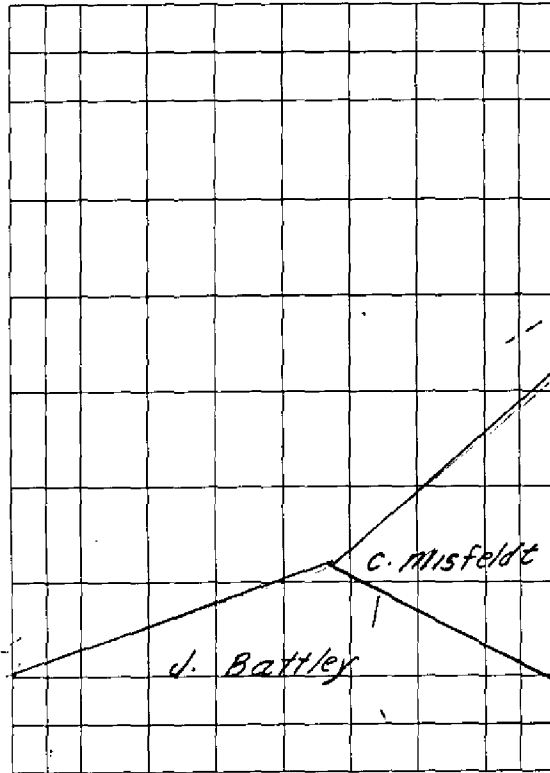

Y=

X=

Roman numerals indicate whether the item is to be entered by (II) Field Party, (III) Photogrammetric Office,  
or (IV) Washington Office.

When entering names of personnel on this record give the surname and initials, not initials only.

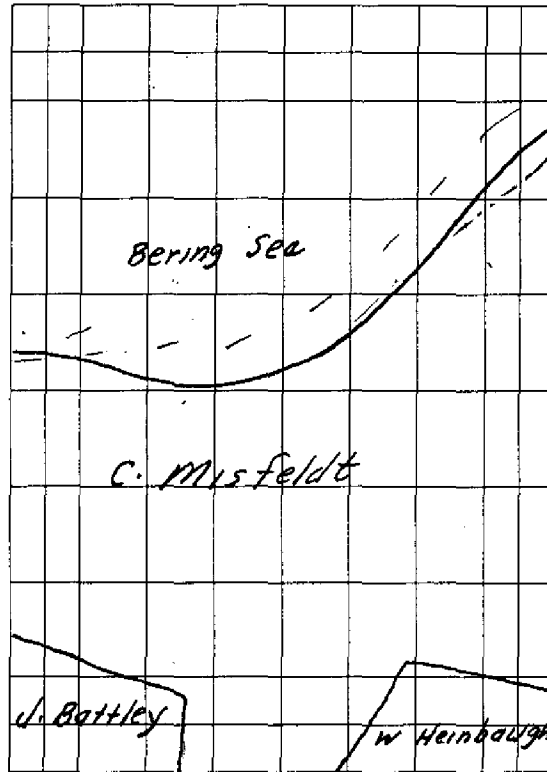

T- 10365

Areas contoured by various personnel  
(Show name within area)  
(II) (III)

Review of instrument work sheets by J. Battley

Compiled 1:20,000 scale, from 1:20,000 scale nine-lens photographs, taken August, 1950 and June, 1951;

additional nine-lens photography to be taken; Season 1952.

(Refer to Air-Photo Indexes B-42, 50, 51, 52 and E-10.)

Summary to Accompany Maps of  
Nunivak Island in Project 6056

Nunivak Island has been mapped under Project 6056 by a series of shoreline maps at a scale of 1:20,000 and a series of topographic maps at a scale of 1:40,000. The shoreline maps are numbered T-9723 to T-9741, inclusive, and the topographic maps are numbered T-10365 to T-10379, inclusive. These two series of maps were adopted so as to satisfy the requirements of the Army Map Service and this Bureau, and to expedite drafting and compilation procedures.

Field work in advance of compilation was done in 1951 and included the establishment of horizontal and vertical control, tidal observations, limited inspection of shoreline and interior features, and the investigation of geographic names. No additional field work was accomplished.

The maps of this project were compiled using instrument work sheets at 1:20,000 scale from the nine-lens plotters. Photographs were nine-lens taken in 1950 and 1952. The shoreline manuscripts at 1:20,000 scale cover only shoreline and adjacent prominent planimetric features. Maps T-9728, T-9734, T-9735 and T-9740 are the exception to this and show contours and other topographic features. These were compiled prior to the adoption of the 1:40,000 scale topographic series for Bureau use which were compiled using work sheets reduced to 1:40,000 scale.

Items registered under T-numbers will include ~~other~~ *cronar julia postum* of the map manuscripts and a copy of the corresponding descriptive reports.

FIELD INSPECTION REPORT

(See Descriptive Report for T-9723 thru 9730)

RADIAL PLOT REPORT

(See Descriptive Report for T-9723 thru  
9730)

COMPILATION REPORT  
T-10365 thru T-10379

31. This report covers the instrument delineation of the 1:40,000 scale topographic maps of all of Nunivak Island. The shoreline detail and topography were compiled simultaneously on the Reading nine lens plotters at 1:20,000 scale using rectified metal mounted photographs. UTM grid intersections were applied to the work sheets by adjusting the work sheets to the radial plot base sheets. The work sheets were then photographically reduced to 1:40,000 scale and forwarded to the drafting section, where the shoreline is to be inked at 1:20,000 scale and the topographic detail scribed at 1:40,000 scale (the 1:20,000 scale shoreline compilation is the subject of a separate report. See attached index for numbers of shoreline maps.).
32. Control. See radial plot report for discussion of horizontal control. The vertical control was adequate. With reference to paragraph 26 of the radial plot report it was found that in most cases where the radial plot office changed the field identification of a "V" station the elevation held during instrument compilation. In two instances, V-1087 (T-10376) and V-1033 (T-10377), it was found that the original field identification was correct. Only the elevations of the field control points which fell on identifiable features were carried forward on to the manuscript. The lake surface elevations furnished by the field party have been shown as unchecked because of the methods used in obtaining them and also because of the fluctuation of the water level.
33. Supplemental data. None
34. Contouring and Drainage. No unusual difficulty was encountered in delineating the contours and drainage.
35. Shoreline, alongshore and offshore details: See  
& 36 the reports for the 1:20,000 scale shoreline maps covering the island. An index of these maps is included in this report. See § 66
37. Landmarks and aids. Form No. 567 is resubmitted for one landmark which does not fall on any of the shoreline sheets. (Forms 567 has been submitted with the shoreline compilations for all other landmarks.) The position of the landmark supercedes that on the previously submitted form which was on unadjusted datum.
38. Control for future surveys. See the reports for the 1:20,000 scale shoreline manuscripts.

39. Junctions. Only the instrument work sheets were joined in this section. *Junctions between maps were made during review. ETR*
40. Horizontal and vertical accuracy. Not applicable.
46. Comparison was made with USGS 1:250,000 scale topographic maps - "Nunivak Island and Cape Mendenhall, 1951".
47. Comparison was made with nautical charts Nos. 9102 and 8851.
48. Geographic Names. All names except "Nunivak National Wild Life Refuge" were taken from the geographic names report and index, which was furnished by the field party and verified by the Geographic Names Section. The excepted name was taken from the USGS maps listed in paragraph 46. The geographic names lists are appended.
49. Notes to the hydrographer. See 1:20,000 scale shoreline maps. *(Pages are included in the Descriptive Reports for the corresponding T-numbers) ETR*

NONFLOATING AIDS OR LANDMARKS FOR CHARTS

TO BE CHARTED  
~~TO BE DELETED~~

STRIKE OUT ONE

Washington, D. C. 14 November, 1955

I recommend that the following objects which ~~have~~ *(have not)* been inspected from seaward to determine their value as landmarks be charted on ~~(individual sheets)~~ the charts indicated.

The positions given have been checked after listing by Ln. Levin

H. E. Syler (Field)  
Chief of Party.

CHARTING NAME	STATE	DESCRIPTION	SIGNAL NAME	POSITION						METHOD OF LOCATION AND SURVEY NO.	DATE OF LOCATION	HARBOR CHART	INSHORE CHART	OFFSHORE CHART	CHARTS AFFECTE	
				LATITUDE #		LONGITUDE #		DATUM	D. P. METERS							D. P. METERS
				°	'	°	'									
<del>ROBERTS</del>		Peak of Mt Roberts which is highest point on island	ROBERTS	60	01	43.723	166	15	37.577	N. 1927 ADJ.	1951				9300	
										T. 11009					9302	
										G. 1054						
										(7-9977) (7-10372)						

This form shall be prepared in accordance with Hydrographic Manual, pages 800 to 804. Positions of charted landmarks and nonfloating aids to navigation, if redetermined, shall be reported on this form. The data should be considered for the charts of the area and not by individual field survey sheets. Information under each column heading should be given.

Review Report  
Topographic Maps T-10365 Thru T-10379  
14 March 1956

62. Comparison with Registered Topographic Surveys:

T-2610      1:40000      1902

This survey falls in the area covered by T-10369 and is to be superseded by T-10369 (or Shoreline Surveys T-9728 and T-9734) for nautical charting purposes.

63. Comparison with Maps of Other Agencies:

Cape Mendenhall, Alaska (USGS), 1:250000, 1951  
Nunivak Island,      "      "      "      "

Topographic and planimetric details are very generalized and approximate on these maps which preclude a detailed comparison. It should be noted that hydrographic information is not available in sufficient quantity to show curves in as much detail as these maps show.

64. Comparison with Contemporary Hydrographic Surveys:

None.

65. Comparison with Nautical Charts:

8851, March 1953  
9302, 1952, corrected to 53-6/15

Minor differences were detected between maps and Chart 8851.

66. Adequacy of Results and Future Surveys:

Only a limited field inspection of alongshore features was made. Thus these features are somewhat generalized and are subject to errors in office interpretation of foul limits, rock heights, etc. Otherwise, no significant deficiencies in accuracy or adequacy of the maps were indicated.

*Office Memorandum* • UNITED STATES GOVERNMENT

TO : Division of Photogrammetry

DATE: Dec. 12, 1955.

FROM : Geographic Names Section.

SUBJECT: Names on Nunivak Island Maps.

The approved name lists for T-10365 to T-10379 (project Ph-56) are returned herewith.

Since nearly all of these names for features on Nunivak Island are being applied for the first time, it seems desirable to have on record the measures that were taken with a view to making them as correct as possible. On Dec. 10, 1952, all the material received from the field party was forwarded to the Board on Geographic Names, in order that it might be sent to the Board's subcommittee in Alaska. For some reason this request was overlooked, and it was not until December 18, 1953, that the Board complied with our request. The reply from the Alaska Advisory is dated January 30, 1954. It deals with general rules rather than with specific names and must have been rushed (note the final sentence in the Board's letter of Dec. 18, 1953). Attention is called to the final paragraph of the letter from Alaska, commenting favorably upon the report from our field party.

  
Lewis Heck

U.S. Board on Geographic Names  
Department of the Interior  
Washington, D.C.

Attention: Miss Fitton

Dear Madam:

With reference to the question of names on Nunivak Island, Alaska, and to the report of a Coast and Geodetic Survey field party which contains many new names as well as variations for those already published, I enclose this report and a tracing of the airphoto mosaic which accompanied it, as well as the preliminary sheet upon which the field party based its investigations.

It is requested that these three enclosures be forwarded to the member of the faculty of the University of Alaska who has been mentioned in this connection, in order that he may look over these reported names and make any pertinent suggestions as to the final form in which they are to appear on the new large-scale maps of the island, as well as on the other maps and charts on which it is shown. These three enclosures should be returned with his comments.

It will be noted that there are a few minor discrepancies between the names on the tracing and those typed in the report but they do not appear to be important, nor to affect the names of any major features on the island.

Very truly yours,

Acting Director

C  
O

AIR MAIL

Mr. R. N. DeArmond  
Secretary, Advisory Committee on Alaskan Names  
Office of the Governor  
Juneau, Alaska

Dear Mr. DeArmond:

The Board made a number of decisions in 1950 for names on St. Lawrence Island. At that time the Advisory Committee on Alaskan Names gave us assistance regarding the spellings of the Eskimo words and the usage of some of the generics. We now have a similar group of names for Nunivak Island on which we would like the Committee's advice.

I believe that the enclosed material, supplied by the United States Coast and Geodetic Survey, is self-explanatory. The Coast Survey plans to bring out a new chart of the island, using the new place-names which have been sent in by their field party. However, we wish to have the rendition of the Eskimo names as nearly as possible consistent with general usage. We particularly question the use of mute, x, k, oo, and ah, and the c in Pnothacat, feeling that miut, ks, and perhaps u. a. and k would be preferable.

It was suggested to us some time ago that Ivar Skarland at the University of Alaska might be able to help with such names, but I do not know whether he is still there. You may wish to send the material to him before returning it to us. The Coast Survey wishes all 3 of these items returned to them ultimately: report of the Coast Survey field party, tracing of the air photo mosaic which accompanied the report, and the preliminary sheet (135 B Kipnuk) with manuscript annotations, on which the field party based its investigations.

→ We have about a month to work on this, if necessary.

Very truly yours,

/s/ Meredith F. Burrill

Meredith F. Burrill  
Executive Secretary

DEPARTMENT OF THE INTERIOR  
WASHINGTON 25, D. C.

Feb. 5, 1954

Director  
Coast and Geodetic Survey  
Washington 25, D. C.

Dear Sir: Attention: Mr. Lewis Heck

At the request of Mr. Lewis Heck we submitted the Coast Survey field party's names on Nunivak Island to our Alaskan Names Advisory Committee for comment.

Copies of our letter to the Advisory Committee and their reply are enclosed. We are also returning herewith the typed names report of the Coast Survey field party, the tracing of the air photo mosaic which accompanied the report, and the preliminary sheet (135 B Kipnuk) with manuscript annotations, on which the field party based its investigations.

Very truly yours,

(Signed) Meredith F. Burrill

Copy of enclosure  
to G.N. 8, 1954

January 30, 1954

Dr. Meredith F. Burrill  
Executive Secretary  
United States Board on  
Geographic Names  
Washington, D. C.

Dear Dr. Burrill:

The Advisory Committee has considered matters recently submitted to it by the Board, including names for Nunivak Island.

With respect to the latter subject, the Committee has consulted with Dr. Ivar Skarland and with some others who might have knowledge of the subject.

The Committee recommends the use of miut in place of miite. The Committee recommends that x not be used and that k be used instead when that sound is indicated. (Note: Mr. Mutziger of the Linguistics Section of the Division of Geography believes that the Alaskan Names Advisory Committee meant ks, not k alone, to be used instead of x.)

If the Eskimo pronunciations are to be followed, the Committee recommends the use of oo in place of u, although the latter is now in use in a good many place names. Unalaska is an example. This is now almost universally given the short u sound in place of the long oo sound. The Committee also feels that k is preferable to g in indicating the Eskimo value of that sound in such names as Pnothakat. The Committee questioned the initial Pn without a vowel in this particular name but has no information to offer.

In general, the sources and information reported by the Coast Survey are good and the Committee has nothing further to offer.

Sincerely,

/s/ R. N. De Armond

R. N. De Armond, Secretary  
Advisory Committee on  
Alaskan Names
