Summary to Accompany Descriptive Report

T-10919 & T-10920

Planimetric maps T-10919 and T-10920 are part of Project Ph-5901 which consists of twenty-four planimetric maps and one shoreline survey. These maps cover a section of the Virginia shore of the Potomac River from Colonial Beach to Baber Point and include Goldman Creek, Rosier Creek and a portion of Upper Machodoc Creek. This is a graphically compiled project at a scale of 1:10,000 in advance of hydrographic surveys to be made in the area. The area was covered by 9-lens photography of May 1958, single lens "W" photography of October 1959 and single lens "S" photography of August 1961. The manuscripts were controlled by radial plot using Stereoplanigraph bridge points to supplement field identified control. The field operations preceding compilation included complete field inspection, the establishment of recoverable photo stations, recovery and identification of horizontal control, tidal bench marks, landmarks, aids to navigation and boundaries. The manuscripts are vinylite sheets, 3-3/4' in latitude by 3-3/4' in longitude, which were scribed and reproduced on cronaflex following photogrammetric office review. The registered copies under T-10919 and T-10920 will consist of a cronar film positive and cronar film negative of each scribed manuscript.

COMM-DC-57843

COMPILATION REPORT
T-10919 & T-10920

The field inspection report and the photogrammetric plot report covering the area of these surveys are part of the Descriptive Report T-10926, T-10927.

31. DELINEATION

These manuscripts were delineated by graphic methods.

Photograph coverage was satisfactory except in the area of Colonial Beach, Virginia where the important details were too close to the edge of the photos.

32. CONTROL

The identification, density and placement of horizontal control was adequate.

33. SUPPLEMENTAL DATA

See item 41.

34. CONTOURS AND DRAINAGE

Contours: Not applicable.

Drainage: Drainage clearly visible on the photographs was delineated as usual. Drainage in heavily wooded areas was transferred by projector from quadrangles after verification by office interpretation of the photos.

35. SHORELINE AND ALONGSHORE DETAILS

Alongshore discolored areas in Rosier Creek were field inspected as "Shallow-mud". Comparison with the chart shows neither an abrupt change in depth nor a foreshore which bares at low water. This inspection was therefore not used.

The shoreline inspection, although inconsistent in some areas was adequate to complete the compilation.

Low water and foul areas were classified by field inspection; the limits were delineated by office interpretation.

36. OFFSHORE DETAILS

Positions of some duck blinds were changed from field inspection to agree with more recent photo coverage.

37. LANDMARKS AND AIDS

Forms 567 for one aid and one landmark are herewith submitted for T-10919.

Form 567 for one landmark is also herewith submitted for T-10920.

38. CONTROL FOR FUTURE SURVEYS

Two Forms 524 for recoverable tidal bench marks are herewith submitted for T-10920.

These stations are listed in Item 49.

39. JUNCTIONS

Junction has been made and is in agreement between T-10919 and T-10920. Junction has also been made and is in agreement between these surveys and the following:

T-10914 to the north
T-10923 to the south
Shoreline survey T-12129 to the west
T-10915 and T-10921 join these surveys to the north and the east respectively in all water areas.

40. HORIZONTAL AND VERTICAL ACCURACY

No comment.

41. BOUNDARIES - T-10919

The Westmoreland - King George County line south from Rosier Creek is in dispute and the two versions were shown on field photograph 59-W-9556 (see paragraph 10 of field inspection report).

There are two groups of individuals who disagree about the former location, on Rosier Creek, of Washington's Mill Pond which is the northern end of the disputed line. Both of the lines as field inspected were delineated. In a partial copy of a record in King George County Clerk's Office, the bearing is given as N.2° E (no date is given and whether true or magnetic is unknown). The true bearing of field inspected lines does not agree with this bearing. On USGS Dahlgren quadrangle the line shown has a bearing of about N 2° E and, if projected southward to the south end of the line as shown on AMS Rollins Fork quadrangle, the line appears nearly correct.

The AMS Rollins Fork quadrangle shows a line nearly corresponding to

the westerly of two field inspected lines. This line is also substantiated by a sign on a road which indicates the county line. The type of road surface changes, indicating that for the purpose of maintenance, at least, the westerly line is a locally agreed upon line or a compromise line. However, the bearing of this line, as shown on AMS Rollins Fork, Va. quadrangle is due north, not N 2° E.

The Naval Weapons Laboratory boundary was taken from field photo information; no drawings were submitted to the compilation office as stated in paragraph 10 of the field report. There are several discrepancies between the line mapped and that shown on the Dahlgren quad.

T-10920 - The city boundary for Colonial Beach was projected from the Morgantown quadrangle. The field inspection report stated in paragraph 10 that a blueprint had been supplied for this, obtained from local authorities, but none was received in the compilation office.

42. thru 45. - ~~Not~~ needed,

46. COMPARISON WITH EXISTING MAPS

T-10919 was compared to U.S.G.S. Dahlgren, Va., Md. quadrangle, dated 1955, scale 1:24,000.

T-10920 was compared to U.S.G.S. Morgantown, Md., Va., quadrangle, dated 1953, scale 1:24,000.

47. COMPARISON WITH NAUTICAL CHARTS

T-10919 and T-10920 were compared to chart 556, scale 1:20,000, published April 1948 (2nd edition) revised 12/12/60. T-10920 was also compared to chart 558, scale 1:40,000, published 11/16/59 (4th edition) corrected to 5/28/60.

Items to be applied to nautical charts immediately: None.
Items to be carried forward: None.

T-10919 & T-10920
Addenda to Descriptive Report

Ratio prints of the following photographs were prepared for the use of the hydro support party:

T-10919

61-S-2903 thru 2906

T-10920

61-S-2899 thru 2903

These photographs were also used in the compilation office to revise shoreline and alongshore details on the manuscripts prior to reproduction.

The centers of these photos have been shown on the manuscripts with dashed circles.

Planimetric
March 20, 1963

61. GENERAL STATEMENT

See Summary accompanying Descriptive Report.

62. COMPARISON WITH REGISTERED TOPOGRAPHIC SURVEYS

T-10919:

860	1:20,000	1862
2600	"	1902
2635	"	1902
8541	"	1942, 1943

T-10920:

860	1:20,000	1862
2600	"	1902
8114	"	1942, 1943
8541	"	1942, 1943

T-10919 and T-10920 supersede the above prior surveys for nautical chart construction.

63. COMPARISON WITH MAPS OF OTHER AGENCIES

U.S.G.S. Dahlgren, Va.-Md.	1:24,000	1955
U.S.G.S. Morgantown, Md.-Va.	"	1953

64. COMPARISON WITH CONTEMPORARY HYDROGRAPHIC SURVEYS

H-8703	1:10,000	1961 (Boat Sheet)
--------	----------	-------------------

T-10919:

Several alongshore foul areas on the manuscript between Stony Point and Baber Point are not on the boat sheet.

T-10920:

Only a portion of the manuscript is covered by H-8703.

A group of dolphins at Wilkerson Wharf (Potomac Beach) is not shown on the boat sheet.

H-8614	1:10,000	1961 (Unverified Smooth Sheet)
--------	----------	--------------------------------

T-10920:

Only a portion of the manuscript is covered by this hydrographic survey. Agreement between them is very good, except that the delineation of piers on the hydro survey is not the same as shown on the manuscript.

65. COMPARISON WITH NAUTICAL CHARTS

556	1:20,000	2nd Ed. 4/19/48, Rev. 12/12/60.
558	1:40,000	5th Ed. 11/5/62

T-10919:

The general configuration of the charted shoreline is in good agreement with the manuscript.

A number of bluffs shown on the manuscript are not charted.

Three charted islets just southeast of Baber Point are not verified by the manuscript.

The geographic name, King George Point, is not shown on either chart. It is correctly depicted as an island on 558, the more recently published of the two charts.

T-10920:

A large group of piles charted just offshore from Colonial Beach, about halfway between White Point and Bluff Point, is represented on the manuscript only by a single short row of piling.

An unlabeled object and a submerged pile, both charted just east of Bluff Point are not delineated on the manuscript.

Another submerged pile charted just east of White Point is also not on the manuscript.

A group of dolphins on the manuscript just offshore from Potomac Beach is not on the charts.

A number of bluffs shown on the manuscript are not on the charts.

66. ADEQUACY OF RESULTS AND FUTURE SURVEYS

These surveys comply with instructions and meet the National Standards of Map Accuracy.

Future surveys in this area should further investigate the disputed King George - Westmoreland County boundary line.

Also, further investigation of the boundaries of Colonial Beach and the Naval Weapons Laboratory should be made during future surveys. See item ten of field report filed with T-10926, 10927. Also item 41, Descriptive Report T-10919, 10920.

~~TO BE CHARTED~~
~~TO BE REVISED~~
~~TO BE DELETED~~

Baltimore, Maryland

February 19 61

I recommend that the following objects which have *(Hatch / Info)* been inspected from seaward to determine their value as landmarks be charted on *(Advised / Info)* the charts indicated.

The positions given have been checked after listing by R. Glaser

William B. Randall *Chief of Party.*

[illegible]

This form shall be prepared in accordance with Hydrographic Manual, pages 800 to 804. Positions of charted landmarks and *nonfloating aids* to navigation, if redetermined, shall be reported on this form. Revisions shall show both the old and new positions. The data should be considered for the charts of the area and not by individual field survey sheets. Information under each column heading should be given.

RECORD OF APPLICATION TO CHARTS

FILE WITH DESCRIPTIVE REPORT OF SURVEY NO. T-10919 & T-10920

INSTRUCTIONS

A basic hydrographic or topographic survey supersedes all information of like nature on the uncorrected chart.

1. Letter all information.
2. In "Remarks" column cross out words that do not apply.
3. Give reasons for deviations, if any, from recommendations made under "Comparison with Charts" in the Review.
