SUMMARY TO ACCOMPANY
DESCRIPTIVE REPORT

T-12403

This 1:10,000 scale final shoreline map is one of nine maps that comprise project PH-6705, Thorne Island and Whale Passage, Alaska. The project was originally assigned as 6 maps (T-12310 thru T-12313, T-12401 and T-12402); however, 3 additional maps (T-12403, T-12404, and T-13096) were included at a later date in order to support an extended area of proposed hydrography.

The purpose of this map was to provide support data to assist hydrographic operations in the vicinity of Whale Passage.

This map portrays shoreline in the rocky region of Lake Bay just south of Kashevarof Passage and east of Stevenson Island.

Photo coverage for the project was provided in July 1966 with 1:60,000 scale, 1:30,000 scale, and 1:20,000 scale photographs. The 1:60,000 scale color photographs were taken with the RC-9 "M" camera for aerotriangulation. Panchromatic photographs at 1:30,000 scale were taken with the RC-8 "L" camera for aerotriangulation and instrument compilation. Supplemental color photographs at 1:20,000 scale were also taken with the "L" camera in order to assist compilation and to provide photo coverage for hydro support. Because of inadequate aerotriangulation results, additional panchromatic bridging photographs at 1:60,000 scale were flown in May 1967 with the "M" camera. The stage of tide for all photographs was based upon predicted tide data. No MLLW photographs were provided.

Field work prior to aerotriangulation consisted of the recovery and

T-12403

Compilation of preliminary manuscripts T-12310 thru T-12313, T-12401 and T-12402 was performed in 1967 at the Coastal Mapping Section, Atlantic Marine Center. With the anticipation of obtaining new photography, preliminary manuscript copies were submitted to the hydrographer for field edit and hydrographic support. When new aerotriangulation results were provided as a result of the new bridging photography, recompilation of the preliminary manuscripts was accomplished. This compilation utilized the field edit data that was performed by the hydrographer during the 1967 field season. Compilation of three additional manuscripts, T-12403, T-12404, and T-13096 was completed in January 1972. Copies of these three Class III manuscripts were submitted to Marine Charts and to the hydrographer for field edit.

Field edit and hydrographic support data for the contemporary hydro surveys were submitted in two stages. A tabulated summary of the six preliminary and three later Class III manuscripts is provided.

<u>DATA SUBMITTED FOR FIELD EDIT</u>	<u>DATE OF EDIT</u>	<u>EDITOR</u>	<u>CONTEMPORARY HYDRO SURVEY</u>
T-12310 (Preliminary)	May 1967 (Partial Edit)	C&GS Ship LESTER JONES	H-8946
T-12311 (Preliminary)	May 1967	C&GS Ship LESTER JONES	H-8945 & H-8946

T-12403

Field edit for this map was applied at the original compilation office in December 1978.

Final review for this final map was performed at the Atlantic Marine Center in May 1986. A comparison was made with the common nautical charts and hydrographic surveys. The original base manuscript and related data along with a final Chart Maintenance Print and a Notes to Hydrographer Print were forwarded to the Washington Science Center for registration and distribution.

FIELD INSPECTION

T-12403

There was no field inspection prior to compilation. Field work accomplished was limited to the recovery and identification of the horizontal control necessary for the aerotriangulation of the project.

AEROTRIANGULATION SKETCH
THORNE ISLAND
AND
WHALE PASSAGE
ALASKA
February, 1967
PH-6705

PHOTOGRAMMETRIC PLOT REPORT
Job PH-6705
Thorne Island and Whale Passage, Alaska

September 25, 1967

This report supersedes the preliminary report dated February 15, 1967. The original bridge strip of "M" photography flown in 1966 proved to be inadequate for the major portion of the area. It was, therefore, necessary to obtain a new bridge strip of "M" photography which was flown in May, 1967.

21. Area Covered

The area covered is in the vicinity of Thorne Island, Alaska. The sheets covered are T-12310 thru T-12313, T-12401 thru T-12404 and T-13096.

22. Method

Five strips of photography were included in this job.

Strip 1 (scale of 1:60,000, RC-9 panchromatic) was bridged by analytic aerotriangulation and adjusted to ground with field identified control points. The bridges from the preliminary report of February 15, 1967, were retained for Strips 2, 3 and 4 (scale of 1:30,000, RC-8 panchromatic). Strips 2 and 3 were readjusted using new values for common points established by the adjustment of Strip 1. Strip 4 could not be readjusted since it had no points in common with Strip 1. The preliminary adjustment of February 15, 1967, is considered adequate for Strip 4 and should be retained. Strip 5 (scale of 1:30,000, RC-8 panchromatic) was increased by three photographs -- 66-L-5855 thru 5857. It was bridged by analytic aerotriangulation and adjusted using values for common points established by the adjustment of Strip 1.

23. Adequacy of Control

Horizontal control was adequate and complied with the project instructions. Closures to control are tabulated and attached.

24. Supplemental Data

USGS quadrangles were utilized to obtain vertical control needed for strip adjustment.

25. Photography

The coverage of the photography was adequate. The diapositives were of good quality.

Respectfully submitted:

Victor E. McNeel

Approved and forwarded:

Henry P. Eichert
Chief, Aerotriangulation Section

PH-6705

31. DELINEATION

The Wild B-8 stereoplotter was used to delineate shoreline, alongshore and interior detail based upon office interpretation of the 1:30,000 scale compilation photographs. The compilation photographs did not cover two islands in the northern portion of this sheet, namely "Beck Island" and "The Triplets". These are to be located by field methods during field edit.

There was no field inspection prior to compilation.

All photographs used to compile this map are listed on NOAA form 76-36B. The compilation photography was adequate except for the previously mentioned photo coverage.

32. CONTROL

See Photogrammetric Plot Reports dated February 15, 1967 and September 25, 1967.

33. SUPPLEMENTAL DATA

None.

34. CONTOURS AND DRAINAGE

Contours are inapplicable.

Drainage was compiled from office interpretation of the photographs.

35. SHORELINE AND ALONGSHORE DETAILS

The mean high water line, foul area and rocks were compiled from office interpretation of the photographs.

There was no low water photography for delineation of the low water line.

36. OFFSHORE DETAILS

Delineated from the compilation photographs.

T-12403

37. LANDMARKS AND AIDS

None.

38. CONTROL FOR FUTURE SURVEYS

A sufficient number of "pass points" have been established to facilitate the location of hydro signals.

39. JUNCTIONS

See form 76-36B.

40. HORIZONTAL AND VERTICAL ACCURACY

See Photogrammetric Plot Report dated September 25, 1967.

46. COMPARISON WITH EXISTING MAPS

Comparison was made with USGS Quadrangle
PETERSBURG (A-3), Alaska, scale 1:63,360, dated 1953.

47. COMPARISON WITH NAUTICAL CHARTS

Comparison was made with Chart 8160, scale 1:80,000, 7th edition,
dated December 19, 1966.

ITEMS TO BE APPLIED TO NAUTICAL CHARTS IMMEDIATELY

None.

ITEMS TO BE CARRIED FORWARD

None.

ADDENDUM TO THE COMPILATION REPORT

T-12403

FIELD EDIT

There were no problems encountered. Information was adequate for rock heights, ledge and foul areas.

The northeast corner of T-12403 was not covered by the compilation photographs. This area was compiled by planetable survey methods. The compilation was at a scale of 1:5,000 for more detailed representation of features and to reduce graphic error.

The planetable information was reduced by use of the vertical projector to the manuscript scale of 1:10,000. There were certain areas designated as kelp without limiting lines. Labels were added to the manuscript in approximately the same positions as shown on the planetable survey.

Beck Island could not be delineated from the uncontrolled hydrographic support photography as suggested by the field editor. This feature was not compiled.

OPR-0910-RA-78

THORNE ISLAND AND WHALE PASSAGE, ALASKA
Lake Bay

1 FIELD UNIT

APRIL 24, 1978 - MAY 24, 1978
JD (114-144)

51 METHODS

All shoreline delineated on T-12403 was verified from a skiff or on foot. Shoreline and topographic detail are noted on black and white chronapaque photographs 66-L(P)5851, 5852 and 5853 using colors with the following accepted meanings: violet-verification of features, red-additions or corrections to features, green-deletion of features. All additions and corrections to the manuscript are noted directly on the photographs. Any deletion of features were made only after confirmation by the hydrographer or by direct observation and are noted on the Field Edit Sheet.

Heights of rocks, islets and ledges were estimated at close range. Depths of submerged rocks were determined with lead lines. All times noted are GMT.

Third order geodetic signals and photo-hydro signals were used for positioning control for visual Hydrographic Surveys RA-5-1-78 and RA-5-2-78 and for locating those rocks not visible on the photographs. (See Progress Sketch in separates for Hydrographic Limits) Detached Positions on all rocks which were not located by the photo field party are included in the Hydrographic Descriptive Reports RA-5-1-78 and RA-5-2-78 to avoid duplication. Manuscript T-12403 does not have complete photo coverage. The limit of photo coverage is noted in the north eastermost corner of Field Edit Sheet T-12403. Beck Island and a portion of the Triplets lie outside photo coverage. Shoreline and topographic detail were verified by plane-table methods on the Triplets. The largest portion of the Triplets Islands lie on manuscript T-12404 therefore the entire Triplets area is described in Field Edit Report OPR-0910-RA-78, T-12404. Since Beck Island appears on color photographs 66L(C)5894, 5893 and 5905 shoreline was not delineated by field methods leaving it to office methods. Office compilation is able to create a more accurate delineation of the shoreline from stereo models using the color photography.

52 ADEQUACY OF COMPILATION

The compilation of manuscript T-12403 is neither adequate or complete in depiction of all rocks. Numerous rocks were not depicted. Foul limits were used much to liberally. There were a number of incorrect delineations. Approximately one and one-half miles of shoreline had foul limit lines in areas of gravel shoreline. In off-shore foul areas (delineated by foul limit lines) many photogrammetrically visible, and previously charted rocks were not plotted on the T-sheet. For these additions refer directly to the photographs. Deletions of the foul limits are noted on the Field Edit Sheet.

-2-

53 MAP ACCURACY

The MHWL was incorrectly delineated there being instances both of islands being depicted as rocks and rocks depicted as islets. A few islets were missed entirely and one islet at Lat. $56^{\circ} 01' 17''$, Long. $132^{\circ} 50' 15''$ appeared on the Field Edit sheet but not on the Photo-Signal Ozalid.

At Lat. $56^{\circ} 01' 45''$, Long. $132^{\circ} 54' 25''$ the MHWL on Manuscript T-12403 indicates a rock outcropping but is actually an islet. This feature is depicted correctly on chart 17401 1:10,000 scale yet is not on T-12403.

There is little doubt that had this project been properly field edited originally the RAINIER would not have had to duplicate the effort; however, there is also little doubt that hydrography would have been necessary in any case to provide a correct and current chart of the area.

Respectfully submitted,

Marianne Molchan LTJG

Field Edit Officer

REVIEW REPORT
SHORELINE

T-12403

61 - GENERAL STATEMENT

Final review for this final map was accomplished at the Atlantic Marine Center in May 1986. For a schedule of the office and field operations, refer to the Summary included with this Descriptive Report.

62 - COMPARISON WITH REGISTERED TOPOGRAPHIC SURVEYS

Not applicable.

63 - COMPARISON WITH MAPS OF OTHER AGENCIES

A comparison was made with USGS quadrangle Petersburg (A-3), Alaska, dated 1953, scale 1:63,360.

64 - COMPARISON WITH CONTEMPORARY HYDROGRAPHIC SURVEYS

Portions of two contemporary hydrographic surveys H-9754 and H-9756, at 1:5,000 scale and field surveyed in April/May 1978 are common to this map. A comparison with a registered copy of H-9754 and an advance copy of H-9756 did not reveal any significant discrepancies.

65 - COMPARISON WITH NAUTICAL CHARTS

A comparison was made with the following NOS charts
17401, 8th edition, dated October 6, 1979, 1:10,000 scale
17382, 12th edition, dated July 25, 1981, 1:80,000 scale.

A "rock" at Lat. 56°01.8', Long. 132°53.4' was originally compiled on the Class III manuscript as a very questionable offshore feature.
