# JOB PH-6402 SHORELINE MAPPING HAWAII IS. WEST COAST (AILUA TO SOUTH CAPE)

## SUMMARY TO ACCOMPANY DESCRIPTIVE REPORT

#### T-12561

This 1:10,000 scale Final Field Edited Map is one of nineteen maps that comprise PH-6402, Hawaii Island, West Coast, Kailua to South Cape. The project consists of sixteen 1:10,000 scale maps (T-12546 thru T-12561) and three 1:5,000 scale inset maps (T-11796, T-11797, T-13312).

The purpose of this map was to furnish data in support of hydrographic operations and to provide current shoreline data for marine charts.

This map includes shoreline along the most southern coast of Hawaii Island from Latitude 18° 54' 45" to Latitude 18° 56' 15".

Photo coverage for the project was adequately provided in August/September 1963 using the Wild RC-8 "S" camera. Photography consisted of 1:30,000 scale panchromatic photographs used for field inspection, aerotriangulation, and compilation. Color photographs at 1:15,000 scale were obtained for compilation and hydro support. Additional color photographs at 1:15,000 scale were obtained in March 1969 with the Wild RC-8 "E" camera. These supplemental photographs were used to compile inset maps T-11796 and T-11797. The stage of tide for all project photographs was based upon predicted tide data. No infrared photographs were provided.

Field work prior to aerotriangulation consisted of the recovery and establishment of horizontal control by photoidentification methods. A field inspection was performed for the project area utilizing the 1:30,000 scale contact photographs. This activity was conducted in February thru September 1964 in conjunction with the northern adjoining project PH-6401. Due to inadequate bridging results, additional horizontal control was established in January 1978 in conjunction with the southern adjoining project, CM-7713.

Analytic aerotriangulation was provided by the Washington Science Center in June 1969. Bridging results for maps T-12559 thru T-12561 could not be satisfactorily achieved. Consequently, the bridge for adjoining project CM-7713 was extended to include horizontal control for the three maps. Refer to the Photogrammetric Plot Report for CM-7713 dated May 10, 1978.

Compilation for this map was performed at the Coastal Mapping Section, Atlantic Marine Center in October 1978. Copies of the initial compilation and hydrographic support data were forwarded to the hydrographer for field edit.

Field edit was conducted in October 1979 by NOAA ship RAINIER personnel in conjunction with hydrographic surveys H-9852 and H-9853.

#### T-12561

Application of field edit was performed at the original compilation office in June 1980. Map copies were submitted to Marine Charts and to the hydrographer for smooth sheet application.

Final review was performed at the Atlantic Marine Center in May 1987. A comparison was made with the common hydrographic survey and nautical chart. The original base manuscript and related data along with a final Chart Maintenance Print and a Hydrographic Print were forwarded to the Washington Science Center for registration and distribution.

#### FIELD INSPECTION

T-12561

Field activity prior to compilation included a field inspection of the shoreline and the recovery/photoidentification of horizontal control necessary for project aerotriangulation. Results of the 1964 field inspection were submitted on the 1:30,000 scale contact photographs. Due to inadequate bridging results for maps T-12558 thru T-12561, additional horizontal control was established in January 1978 in conjunction with adjoining project CM-7713.

Memorandum

ro : Chief, Photogrammetric Field Operations

DATE: August 5, 1964

THRU : Honolulu Field Officer

FROM : Lt(jg) Edward P. Cline

SUBJECT: Control Identification Project No. 21413

No problems were found in the control identification on Project 21413. The following is a list of the stations identified on the various Flight lines:

FLIGHT STRIP NO. 5

WAIKAKUU,4, 1951 KAPUKAWAA, 1884 OHEPUUPUU, 1890

FLIGHT STRIP NO. 6

KAMOI, 1948

NA PUU a PELE, 1891

PUU KI, 1914

TANK, 1948

Supplimental Station Pricked:

KAUNA POINT LIGHT, 1948

FLIGHT STRIP NO. 7

KALAR 2, 1948
PALAHEMO 1898
KAMILO, 1898
KIPAEPAE, 1898
Supplimental Stations Pricked:
KALAE LIGHT, 1948
KALAE, 1887
MAHANA, 1898

The ratio prints provided by the Washington Office were of great assistance in the identification of the stations and they were very well placed.

Shoard P. Oine
Edward P. Cline

#### Photogrammetric Plot Report Hawaii Island, Hawaii PH-6402

June 10, 1969

#### Area Covered 21.

This project extends along the southwest shore of Hawaii Island. It includes T-sheets 12546 through 12561 at 1:10,000 and T-sheets 11796, 11797 and 13312 at 1:5,000. This project joins PH-6401 which extends along the north-west shore of the island.

#### 22. Method

Strips were bridged on the stereoplanigraph and adjusted

•	by IBM 1620	methods. Strip	#4 discussed	in the report

t					
				ı	
	* */				
<u></u>					

4. McCANDLESS, 1948 SS #1 and SS #2 although held in the bridging could be seen on only one photograph in Strip #10 due to cloud coverage.

#### 24. Supplemental Data

Ratio prints will be provided to aid in compilation. Local USGS quads were used to provide vertical points needed for the strip adjustment program.

#### 25. Photography

Photography was not adequate to provide coverage of the 1:5,000 scale sheets. This inadequate coverage was caused by a change in the limits of the 1:5,000 areas after bridging was nearing completion. Photography was adequate in regard to definition and overlap.

Submitted by,

John D. Perrow, Jr.

Approved by,

Henry P. Eichert

Chief, Aerotriangulation Section

#### Notes to Compiler PH-6402 Hawaii Island, Hawaii

The following points should be used in setting individual models along Strips #12 and #13.

#### (1) <u>63-s-7964-7965</u>

Points 68803, 68804, 67100, 67101, 64100, 64101, 64102 and 64103.

(2) <u>63-8-8080-8081</u>

Points 22330, 23310, 23800, 23801

(3) 63-S-8081-8082

Points 77331, 78333, 22801, 23800, McCANDLESS SS #1 and SS #2

(4) <u>63-s-8082-8083</u>

Points 76331, 77331, 77333

(5) 63-s-8083-8084

Points 75331 HONAUNAU ST. BENEDICT CATH. CH. SPIRE, 1948 plus points dropped from model 8082-8083.

(6) 63-S-8084-8085

Points 75331, 75333 plus points dropped from model 8083-8084.

Plates 63-S-7821 and 7824 were not used in bridging Strip #10.

Plates 63-S-7976, 7978, 7880, 7982 and 7984 were not used in Strip #11.

# PHOTOGRAMMETRIC PLOT REPORT HAWAII ISLAND-SOUTHEAST COAST CM-7713

May 10, 1978

#### Area Covered

This project covers most of the southeast coast of Hawaii Island, Hawaii. The following T-sheets are involved:

TP-00375 thru TP-00380 (1:20,000) TP-00488 and TP-00489 (1:5,000)

In addition to the above T-sheets, T-12559 thru T-12561 at 1:10,000 scale from PH-6402 are also covered.

#### Method

Two strips of 1:50,000 (strips 1 and 2) and one strip of 1:30,000 (strip 4) panchromatic photography were bridged by analytic aerotriangulation methods.

Strip 4 was bridged solely to provide compilation points for 1:15,000 compilation photography covering TP-00488 and TP-00489.

Ties were made with strip 2 of CM-7712 on the north coast and strip 12 of PH-6402 located near the southern end of the island.

Ratio points for the offshore 1:30,000 scale strips 11 thru 18 were read on the 1:50,000 strips.

Strip 12, 1:30,000, of PH-6402 which would not adjust satisfactorily in 1969 for unknown reasons was rebridged using old horizontal control along with 1977 identified horizontal control and ties from the 1:50,000 strip 2 of the CM-7713 project.

Strips 2 and 4 of CM-7713 and strip 12 of PH-6402 adjusted satisfactorily.. The 1964 subpoint for KAMILO (HTS) 1898 is believed to be in error and was disregarded.

Strip 1 of CM-7713 could not be adjusted to meet bridging accuracy standards for all stations. A problem is suspected with PULAMA 1914 but could not be resolved. The final adjustment to this strip was made letting PULAMA 1914 float and disregarding the error in y of about -25 feet at this station.

Ratio points for an offshore 1:15,000 color strip were read on Strip 12. (PH-6402)

T-sheets TP-00375 through TP-00380, TP-00488, TP-00489, and T-12559 through T-12561 were plotted and sent to AMC at Norfolk, Virginia.

#### Adequacy of Control

With the exception of a horizontal control problem in strip 1 the horizontal control was adequate.

Vertical control was obtained from shoreline points and USGS quadrangle elevations and was satisfactory.

#### Photography

The quality and location of the photography was satisfactory.

This photography was flown by American Aerial Survey, Inc., with a Zeiss RMK A 15/23 camera, Iens serial number 118960.

#### COMPILATION REPORT

#### T-12561

#### 31. DELINEATION:

Delineation was by instrument methods using the Wild B-8 stereoplotter and 1:30,000 scale panchromatic compilation/bridging photographs. Ratio prints of the 1:15,000 scale color photographs were used graphically to supplement the compilation of minor detail and to assist in photo interpretation.

The field inspection supplied on the 1:30,000 scale contact prints was difficult to interpret. Individual rocks that could not be clearly identified during compilation were not compiled.

Photo quality and coverage were adequate.

#### 32. CONTROL:

Specified control stations from adjoining project CM-7713 were provided to strengthen the horizontal control for this manuscript.

Refer to the Photogrammetric Plot Reports, dated June 10, 1969 and May 10, 1978 (CM-7713).

#### 33. SUPPLEMENTAL DATA:

None.

#### 34. CONTOURS AND DRAINAGE:

Contours are inapplicable. Drainage was delineated from the compilation photographs.

#### 35. SHORELINE AND ALONGSHORE DETAILS:

The shoreline, coral and foul limits were delineated from office interpretation of the photographs and from the annotated photographs resulting from the precompilation field inspection. Because of the small tide range, no mean lower low water line was compiled.

#### 36. OFFSHORE DETAILS:

Compilation of offshore detail was performed as described in Item #31.

#### T-12561

#### 37. LANDMARKS AND AIDS:

One charted navigational aid was photogrammetrically positioned and appropriate data was submitted for field edit.

#### 38. CONTROL FOR FUTURE SURVEYS:

None.

#### 39. JUNCTIONS:

Refer to the Data Record Form 76-36B, Item 5.

#### 40. HORIZONTAL AND VERTICAL ACCURACY:

Refer to the Photogrammetric Plot Reports dated June 10, 1969 and May 10, 1978 (CM-7713).

#### 46. COMPARISON WITH EXISTING MAPS:

A comparison was made with USGS quadrangle Ka Lae, Hawaii, scale 1:24,000, dated 1959.

#### 47. COMPARISON WITH NAUTICAL CHARTS:

A comparison was made with NOS Chart 19320, 12th edition, scale 1:250,000, dated June 17, 1978.

#### ITEMS TO BE APPLIED TO NAUTICAL CHARTS IMMEDIATELY:

None.

ITEMS TO BE CARRIED FORWARD:

None.

#### ADDENDUM TO THE COMPILATION REPORT

#### T-12561

Field edit was conducted in September/October 1979 by NOAA ship RAINIER personnel in conjunction with hydrographic surveys H-9852 and H-9853. Adequate information was furnished to advance the manuscript to Class I.

FIELD EDIT REPORT OPR-T126-RA-79 CM-7713 T-12561

HAWAII Hawaii, Southeast Coast Ka Lae

1 Field Edit

25 September 1979 - 4 October 1979 (J.D. 268 - J.D. 277)

#### Methods

Field edit operations on T-12561 began 25 September 1979 (J.D. 268) and ended 4 October 1979 (J.D. 277). Ship's time (GMT-9) was used to reference shoreline features in the field, but conversion was made to GMT (Ship's time +9) on the field edit sheet and final discrepancy print. Notes on the field edit sheet and discrepancy print were made using colors with the following acceptable meanings: green-deletion of features; red-answers to specific questions on the sheets; violet-verification or additions.

The features were verified on foot except for the sheet west and north of Ka Lae light. This latter area was examined by small boat. Additions of rocks were photo-pricked and referenced on the discrepancy print. The rock at W155 $^{\rm O}$  29 $^{\rm '}$  24 $^{\rm ''}$ , N18 $^{\rm O}$  55 $^{\rm ''}$  36 $^{\rm ''}$  was neither verified nor disproved due to surf conditions. Also due to surf conditions, it was difficult in some cases to determine the submerged ledge or foul limits.

Color photographs 8008, 8009, 8010, 8012, the discrepancy print, and the field edit sheet were sued to record and present data.

This field edit survey complied with Chapter 11, Manual of Coastal Mapping Field Procedures and the project instructions.

#### Adequacy and Completeness

The manuscript, as amended by the field edit survey, is adequate and complete. The entire sheet is field edited.

#### Geographical Names

The name of the bay in the special investigation is Kaulana Bay.

#### Manuscript Accuracy

Direct comparison of shoreline features with the discrepancy print and photos was the primary method of determining accuracy. Agreement was excellent with the exception of Kaulana Bay boat ramp, a new feature. During an investigation of the bay as a possible harbor of refuge the boat ramp was located using two T-2 Theodolites. Its location is N18<sup>o</sup> 55' 11.780", W155<sup>o</sup> 40' 17.410".

#### <u>Rec</u>ommendations

The rock at 155° 29' 24", 18° 55' 36"N should be retained as plotted on the manuscript. The Kaulana Bay boat ramp should be plotted.

This corrected manuscript should supercede all previous shoreline compilations.

Respectfully submitted,

Thomas G. Clark Lieutenant, NOAA Approved and Forwarded

Wayne L. Mobley

Wayne L. Mobley Captain, NOAA Commanding

# REVIEW REPORT SHORELINE

T-12561

#### 61. GENERAL STATEMENT:

Final review for this Final Field Edited Map was accomplished at the Atlantic Marine Center in May 1987. For a schedule of the office and field operations, refer to the Summary included with this Descriptive Report.

#### 62. COMPARISON WITH REGISTERED TOPOGRAPHIC SURVEYS:

Not applicable.

#### 63. COMPARISON WITH MAPS OF OTHER AGENCIES:

A comparison was made with USGS quadrangle Ka Lae, Hawaii, scale 1:24,000, dated 1962.

#### 64. COMPARISON WITH CONTEMPORARY HYDROGRAPHIC SURVEYS:

A comparison was made with a registered copy of hydrographic surveys H-9852, RA-10-3-79 and H-9853, RA-10-4-79; both surveyed in 1979 at 1:10,000 scale. No significant differences were noted.

#### 65. COMPARISON WITH NAUTICAL CHARTS:

A comparison was made with NOS Chart 19320, 13th edition, scale 1:250,000, July 10, 1982.

#### 66. ADEQUACY OF RESULTS AND FUTURE SURVEYS:

This map complies with the Project Instructions, and meets the requirements for National Standards of Map Accuracy.
