SUMMARY TO ACCOMPANY

DESCRIPTIVE REPORTS

T-12807, T-12439, T-12667 through T-12670

Shoreline Maps T-12807, T-12439, and T-12667 through T-12670 are all 1:20,000 scale maps, $7\frac{1}{2}$ minutes in latitude and 10 minutes in longitude, covering the southwest portion of Project PH-6409, Orca Inlet, Alaska. The purpose of these maps was to provide hydro support and to furnish shoreline for nautical chart construction.

As stipulated in the instructions, compilation was by Kelsh and graphic methods, using tide coordinated infrared photography taken at near and below MLLW and near MHW.

The area covered by these maps was severely affected by the 1964 earthquake. A general uplift resulted. Because of the very wide expanse of mud and sand tidal flats which exist, it is logical to expect new shorelines to have been created. However, many such shorelines may have gone undetected or been misidentified on the infrared photography because of rain which dominates weather conditions of the area. Also, in May, the date of photography, there is a constant runoff from melting snow. This also serves to keep the ground wet. The newness of the shoreline (14 months since the earthquake) might mean that a sufficiently distinguishable berm line would not have had time to develop. These factors may have combined to make new shoreline created since the earthquake unidentifiable on the infrared photography taken at 7.9 to 8.2 feet above MLLW. MHW is 11.5 feet at Cordova. The shoreline shown is from office interpretation without field confirmation.

field work preceeding compilation consisted of the recovery, identification and establishment of horizontal control necessary for bridging. There was no clarification of details.

Except for T-12807, which was partially edited in 1965, none of these maps was field edited.

Final review was done at AMC in March and April of 1977.

FIELD INSPECTION

T12668

Field work prior to compilation was limited to the recovery and identification of horizontal control necessary for bridging.

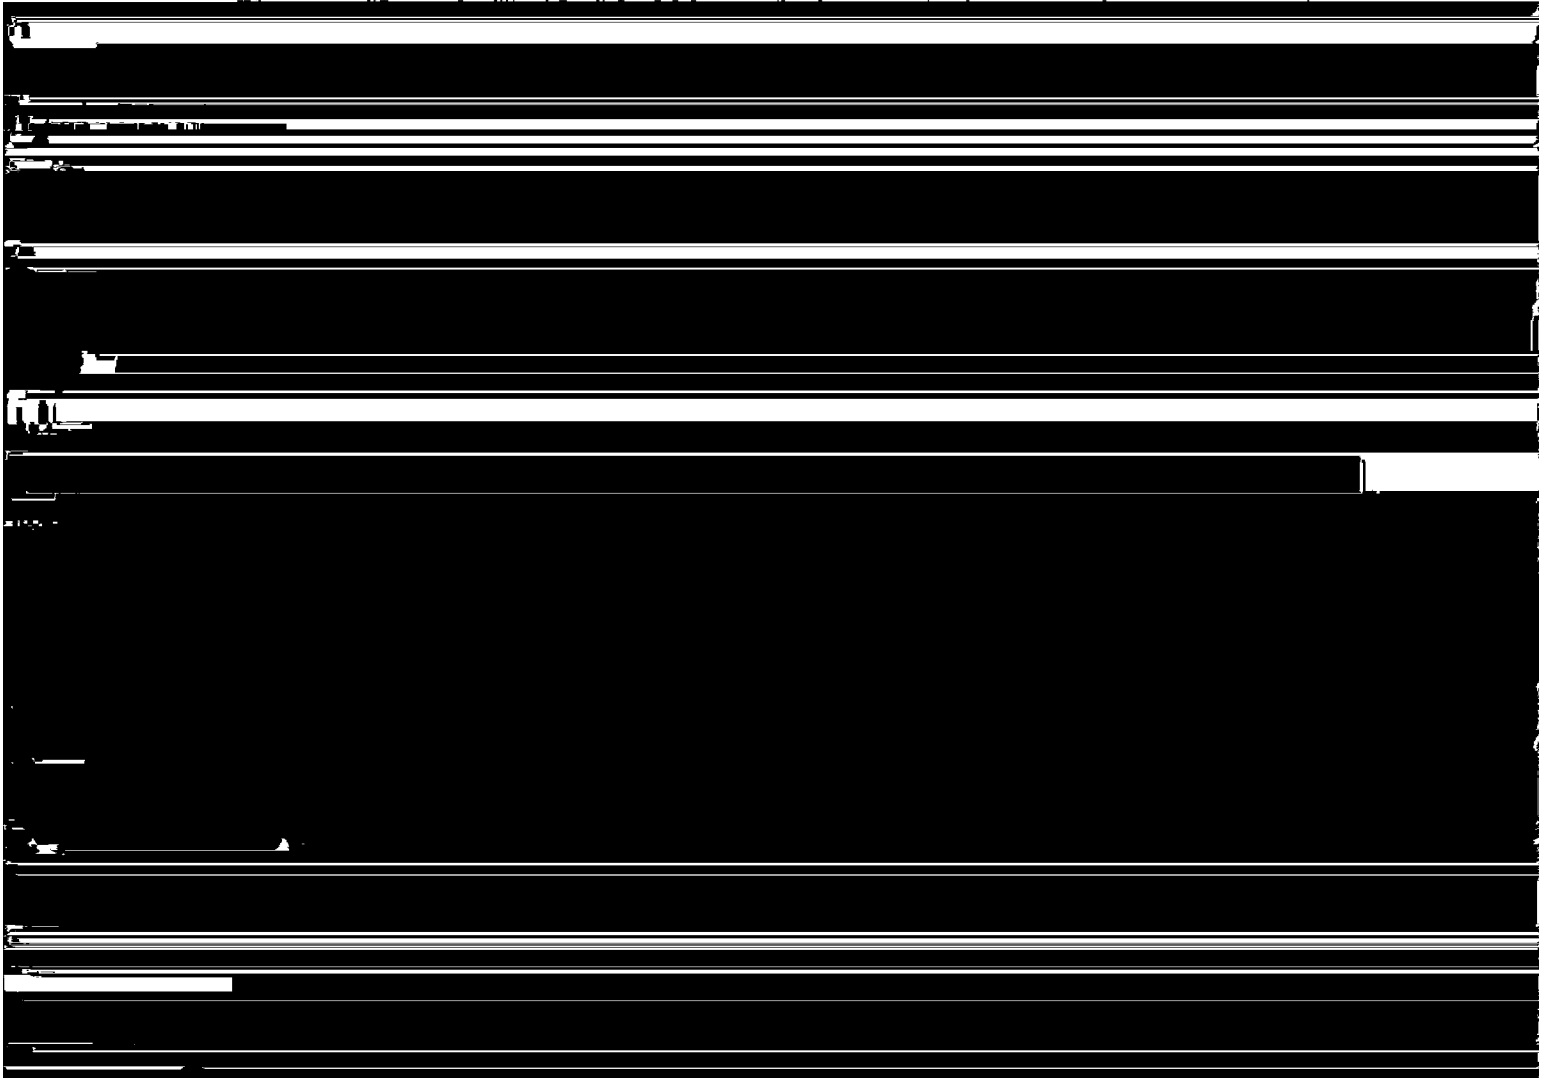

Photogrammetric Plot Report
Orca Inlet, Alaska
PH-6409
October 1965

21. Area Covered

This report pertains to the area of Orca Inlet, Alaska. The sheets covered are T-12667, T-12668, T-12669, T-12670, and parts of T-12439 and T-12807.

22. Method

Four strips were bridged by analytic aerotriangulation methods. Common points were transferred from Strips #1 and #2 (1:60,000 scale) to infrared photography (1:40,000 scale) which is to be used by compilation. These points are 150 micron drill holes on the infrared photography.

25. Photography

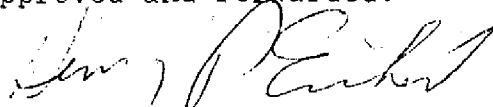

The photography was adequate.

Respectfully submitted:

Don O. Norman

COMPILATION REPORT

T-12668

31. DELINEATION:

Models were set on the Kelsh stereoplotter using photography taken when the stage of tide was near mean lower low water. Details, except for the mean high water line, were compiled from the Kelsh models. The mean high water line was compiled graphically using photography taken near mean high water.

All photography used in compilation is black and white infrared flown at 1:40,000 scale. It was adequate in coverage.

32. CONTROL:

See Photogrammetric Plot Report dated October 1965.

33. SUPPLEMENTAL DATA:

None.

34. CONTOURS AND DRAINAGE:

Contours are inapplicable. Drainage was delineated from office interpretation of the photographs.

35. SHORELINE AND ALONGSHORE DETAILS:

The shoreline and all alongshore details were delineated from office interpretation of the photographs.

36. OFFSHORE DETAILS:

None.

37. LANDMARKS AND AIDS:

One fixed aid to navigation (Mummy Island Light) and a landmark (Radio Tower) are within the area covered by this sheet.

38. CONTROL FOR FUTURE SURVEYS:

None.

39. JUNCTIONS:

See Form 76-36B, Item 5.

40. HORIZONTAL AND VERTICAL ACCURACY:

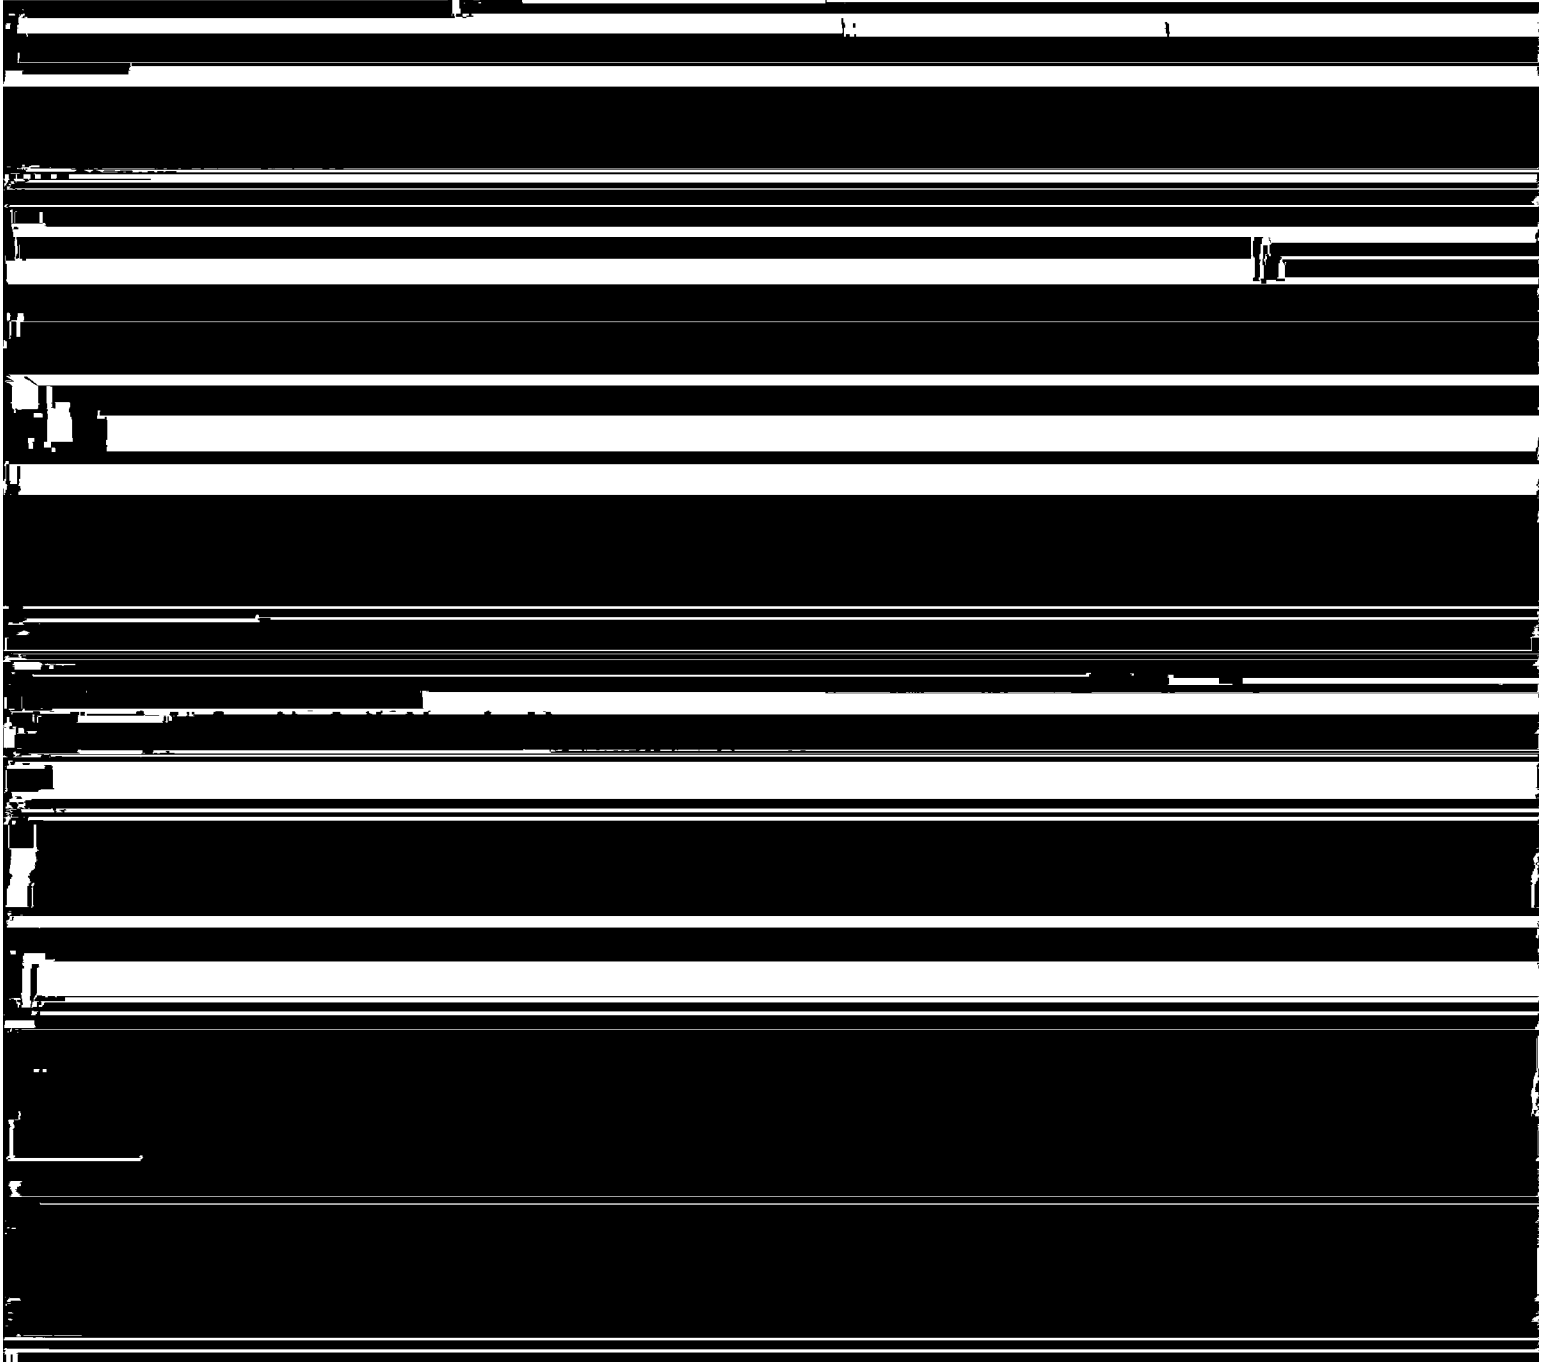

No statement.

41. CHANNEL AND SHOAL LINES:

Bottom configurations brought about by the March 1964 earthquake were delineated as channel and shoal lines from the lowest stage of tide photography.

46. COMPARISON WITH EXISTING MAPS:

Comparison was made with USGS Quadrangles CORDOVA (B-5) and CORDOVA (B-6), ALASKA, scale 1:63,360, dated 1951 and 1953, respec-

T-12668

REVIEW REPORT

T-12668

SHORELINE

March 20, 1977

61. GENERAL STATEMENT:

See Summary, which is Page 6 of this Descriptive Report. A comparison print showing the differences noted in Paragraphs 62, 63 and 65 is submitted with the original of this report.

The landmark tower charted at Whiteshed is not visible on the photographs. Since there was no field edit, its existence was not field verified and no 76-40 is submitted for it.

62. COMPARISON WITH REGISTERED TOPOGRAPHIC SURVEYS:

A comparison was made with Registered Surveys 3642 and 3670, each 1:20,000 scale, dated 1916. Two piers shown at Whiteshed on Survey 3642 are not visible on the photos. Other shoreline differences are shown on the comparison print in blue pencil.

In the area compared, T-12668 supersedes Surveys 3642 and 3670 for nautical chart construction purposes.

63. COMPARISON WITH MAPS OF OTHER AGENCIES:

A comparison was made with USGS Quadrangles CORDOVA (B-5) and (B-6), ALASKA, each 1:24,000 scale, dated 1951 and 1953, respectively. The Egg Islands are very low sand islands. Their positions are altered by tide and wind action. This accounts for the differences noted in position and configuration of the islands between the two maps. These differences are shown on the comparison print in blue pencil.

64. COMPARISON WITH CONTEMPORARY HYDROGRAPHIC SURVEYS:

No contemporary hydrographic survey of the area bounded by the limits of this map was conducted.

65. COMPARISON WITH NAUTICAL CHARTS:

A comparison was made with Chart 8520, 1:80,000 scale, dated March 7, 1966. The configuration and positions of the Egg Islands is considerably different on the photos than that shown on the chart. The charted positions are shown on the comparison print in red pencil.

66. ADEQUACY OF RESULTS AND FUTURE SURVEYS:

This map complies with the Project Instructions, except it was not field edited. It meets the requirements for Bureau Standards and the National Standards of Map Accuracy.
