SUMMARY TO ACCOMPANY

DESCRIPTIVE REPORT

T-13178 thru 13190

Shoreline surveys T-13178 thru 13190 are part of project PH-6306. The project is located in southeastern Alaska in the Hoonah Sound area adjacent to Peril Straits.

There was no field work preceding the incomplete manuscripts.

Compilation was at 1:10,000 scale mostly by B-8 plotter the remainder by graphic methods. A copy of each manuscript classified "Incomplete" along with ozalids and specially prepared photographs were furnished for the preparation of the boat sheets, location of photo hydro signals and field edit use.

Surveys T-13187 thru T-13189 lacked field edit below 57° 35' and those portions of the manuscripts were declared Class III. Field edit was in 1969. After field edit was applied the manuscripts were scribed, stuck-up and reproduced on cronaflex. Final review was at AMC during March and April, 1973. One cronaflex and negative of the final reviewed manuscripts are being forwarded for record and registry.

FIELD INSPECTION

T-13189

There was no field inspection prior to compilation.

Photogrammetric Plot Report (Part I)
Job PH-6306
Hoonah Sound and Peril Strait, Alaska

October 1968

21. Area Covered

This report covers Hoonah Sound, Alaska, the area which is covered by 1:10,000 scale T-sheets only. There are thirteen (13) 1:10,000 scale T-sheets, T-13178 thru T-13190. Sheets T-11939 thru T-11942 will be bridged at a later date.

22. Method

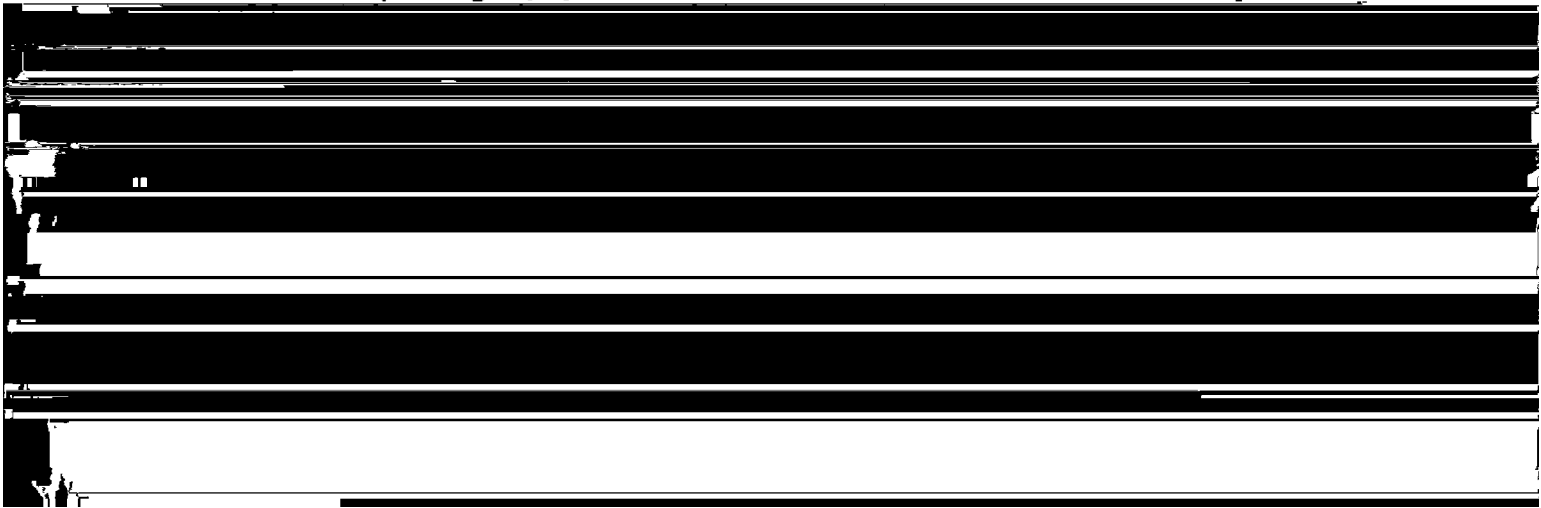

Six (6) strips were bridged using analytical aerotriangulation methods. Strips 1 and 2 were 1:60,000 scale panchromatic and strips 4 thru 7 were 1:30,000 scale color. Numerous tie points were located to control the various strips due to lack of horizontal control.

The attached sketch of the strips bridged shows the placement of triangulation used in the final strip adjustments. Closures to horizontal control are shown for each strip on the IBM read-outs, along with all bridge points on Alaska Zone 1 plane coordinates.

23. Adequacy of Control

All horizontal control was premarked, but sparse. Together with tie points the horizontal control is adequate to control the various strips.

It will be noted that this bridge was not run in accordance with instructions for this job. It was intended to bridge the 1:60,000 scale RC-9 "M" photography only and drop compilation points on the color photographs. However, upon examination of the "M" photography it was discovered that much of the pre-

24. Supplemental Data

Vertical control needed for the adjustment was taken from USGS quadrangles.

25. Photography

The definition and quality of the RC-9 "M" and RC-8 "L" color photography were good. Coverage was adequate to compile all sheets either by stereoscopic plotting instrument or graphically.

Cronapaque and matte ratio prints have been ordered from the 1:30,000 scale color photographs on black and white base.

Respectfully submitted,

I. I. Saperstein
I. I. Saperstein

Approved and forwarded,

Chief, Aerotriangulation Section

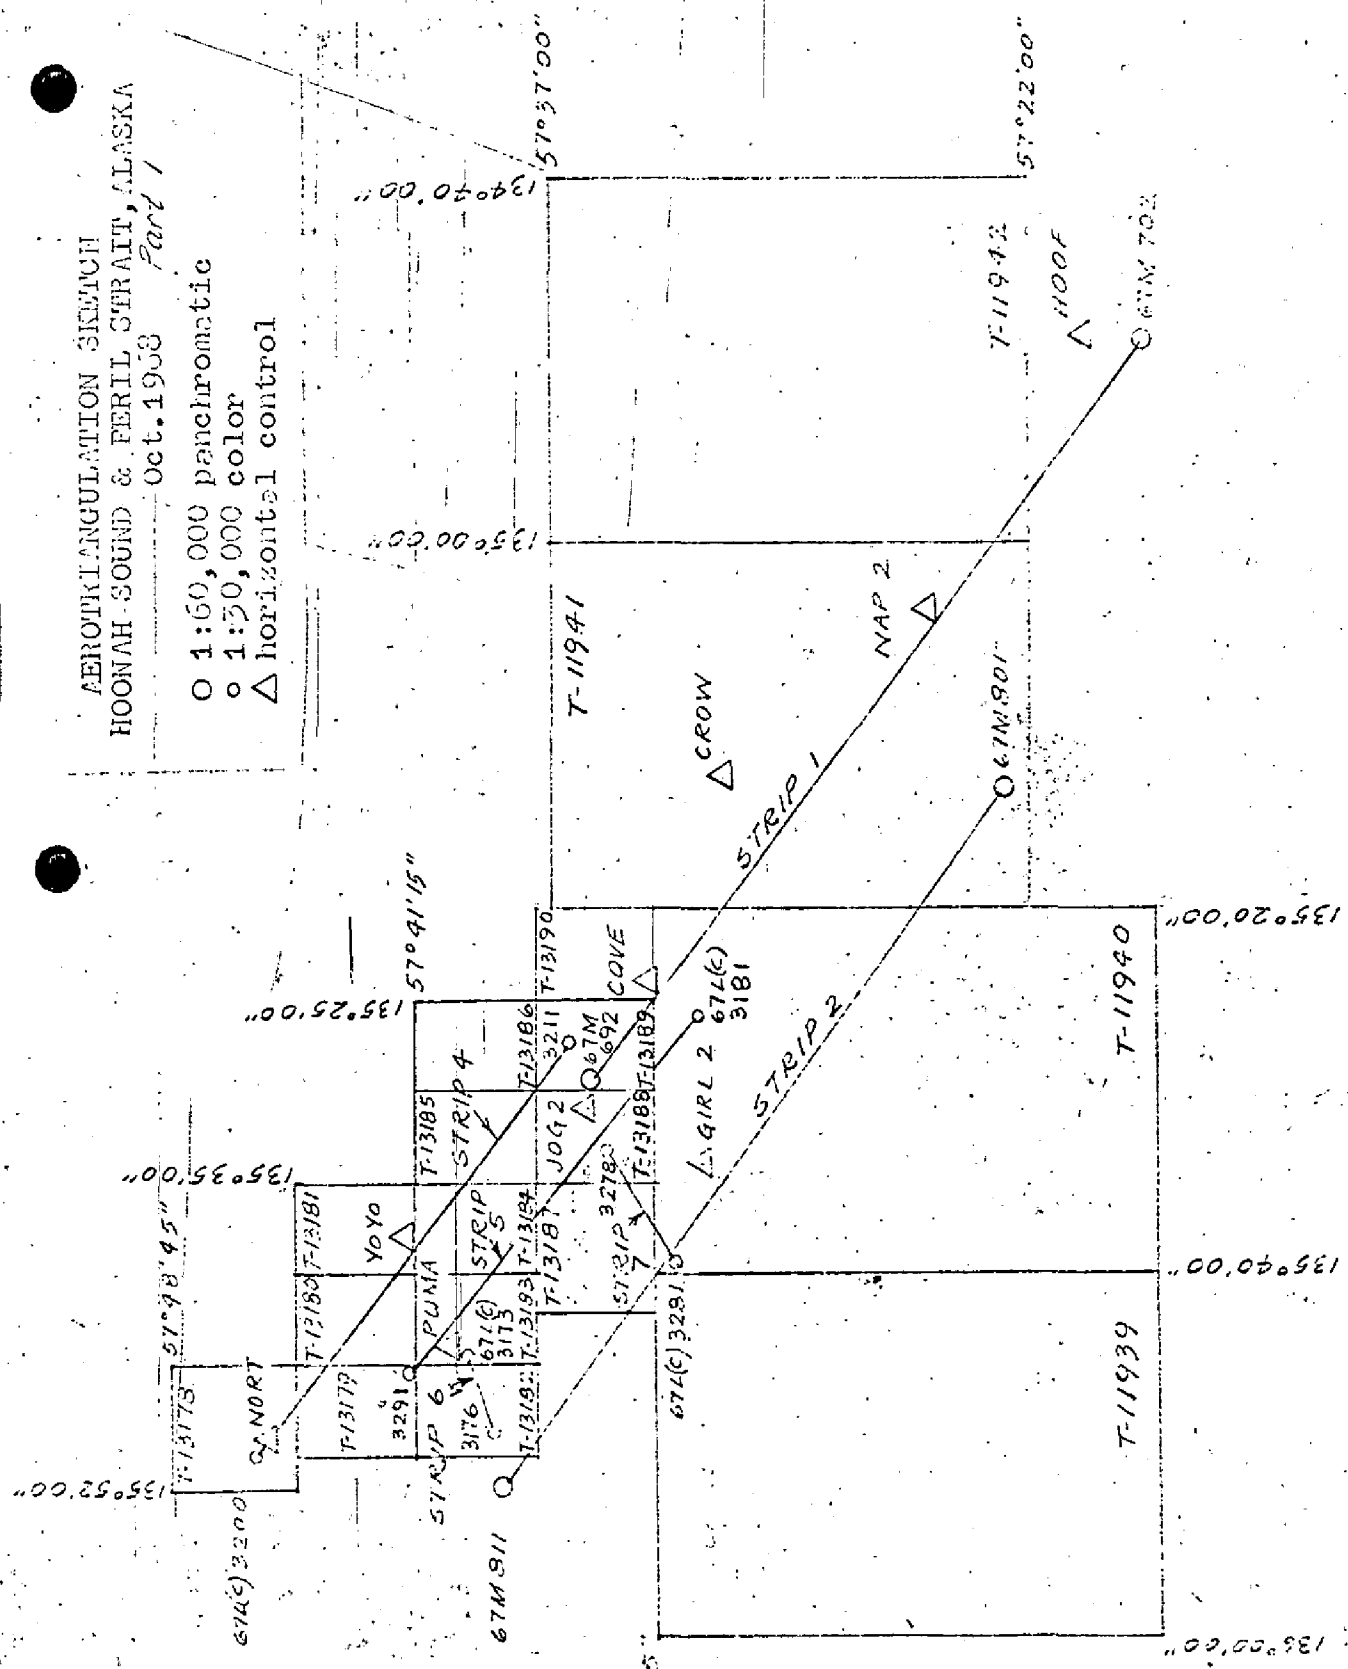

NOTES TO COMPILER

Photos 67-L(C)-3181, 3182, 3183 on Strip 5 could not be bridged because of water areas. However, points were dropped from Strip 1 common to points on the above photos so that several offshore islands can be compiled. Models 3181-3182-3183 can be set on the B-8 using positions for these points from Strip 1, (see photos 67-M-692, 693).

Photos 67-L(C)-3212 thru 3215, the southern extension of Strip 4 could not be bridged because of water areas. Sufficient common points between the above photos and Strip 1 were located and transferred to the ratio prints so that sheets T-13189 and T-13190 could be compiled graphically. Positions for these common points can be found on the IBM readout for Strip 1, (see photos 67-M-692 thru 694)..

AEROTRIANGULATION SKETCH

COMPILATION REPORT

PH-6306

T-13189

31. DELINEATION

All details on the manuscript were compiled by graphic method. The photographs were satisfactory.

32. CONTROL

See Photogrammetric Plot Report, Part I, dated October, 1968.

33. SUPPLEMENTAL DATA

None

34. CONTOURS AND DRAINAGE

Contours were inapplicable. Drainage was delineated from office interpretation of the photographs.

35. SHORELINE AND ALONGSHORE DETAILS

The mean high water line and mean lower low water line were compiled by graphic method from office interpretation of the office photographs.

36. OFFSHORE DETAIL

None

37. LANDMARKS AND AIDS

None

38. CONTROL AND FUTURE SURVEYS

No recoverable topographic or photo hydro stations have been shown. A sufficient number of shoreline pass points have been shown as an aid for the hydrographer in establishing hydrographic signals.

39. JUNCTIONS

Junction are in agreement with T-13186 to the north. T-13188 to the west, T-13190 to the east. There is no contemporary survey to the south.

40. HORIZONTAL AND VERTICAL ACCURACY

No statement.

41. FIELD EDIT

The field edit for this sheet was well done and all items in question were answered satisfactorily.

42-45. Not applicable.

46. COMPARISON WITH EXISTING MAPS

A comparison was made with USGS Quadrangle SITKA (C-5) ALASKA, Scale 1:63,360 dated 1951.

47. COMPARISON WITH NAUTICAL CHARTS

A comparison was made with Chart 8252. Coronation Island

APPROVAL SHEET

for

FIELD EDIT

Hoonah Sound

Alaska

OPR-488

Field edit of the following manuscripts was accomplished under my supervision and are approved for submission.

FIELD EDIT REPORT

Map T-13189

Peril Strait

Elovoi Island

Field edit of map T-13189 was accomplished during September 1969. Inspection was done from a skiff and on foot in conjunction with photo-hydro signal location.

METHOD

Field photographs and a copy of the field edit ozalid were examined in the field. The mean high water line was verified by visual comparison of the shore area to field photographs and ozalid. All notes are in ~~v~~ violet pencil on the ozalid.

ADEQUACY OF COMPILATION

Compilation of the map is excellent. Field inspection of the area south of latitude $57^{\circ} 34' 30''$ N was not carried out, since this area is covered by a complete 1,5,000 scale survey H-7985 (1952), and was not within the limits of OPR-488.

RECOMMENDATIONS

It is recommended that the map be revised in accordance with applicable notes and the H-7985 survey and be accepted as an advance manuscript.

Respectfully Submitted,

Allan F. Divis

REVIEW REPORT T-13189

SHORELINE

April, 1973

61. GENERAL STATEMENT

See summary which is page 6 of the Descriptive Report.

There is no field edit south of 57° 35'.

62. COMPARISON WITH REGISTERED SURVEYS

There is no registered survey in this area.

63. COMPARISON WITH MAPS OF OTHER AGENCIES

A visual comparison was made with USGS Quadrangle Sitka (C-5), 1951 at 1:63,360 scale. There is general agreement.

64. COMPARISON WITH CONTEMPORARY HYDROGRAPHIC SURVEYS

A comparison was made with a copy of verified boat sheet H-9054, 1969 at 1:10,000 scale. There is general agreement except for minor variations in the MLLW line. The photogrammetric MLLW line was delineated from photos taken at .2 above MLLW (predicted) and is retained on the survey for whatever use it may be to the chart compiler. There is no contemporary hydro survey south of 57° 35'.

65. COMPARISON WITH NAUTICAL CHARTS

A visual comparison was made with Chart 8283, 1:40,000 scale dated July 17, 1971. There is general agreement.

66. ADEQUACY OF RESULTS AND FUTURE SURVEYS

This survey meets with project instructions and the National Standards of Map Accuracy.
