## DESCRIPTIVE REPORT

Accompanying Topographic Sheet No. 4110

Purpose: The purpose of this topographic survey was to locate the shore line and to locate signals, both natural and artificial for use in the hydrographic survey.

Control. Triangulation stations were recovered by a signal building party in advance of the topographic party. A triangulation station was occupied at intervals along the coast.

The north part of the sheet in the vicinity of the Coquille River Light House and Bandon Harbor was not completed owing to lack of time.

There were no prominent natural objects located on this survey which could be used for navigational purposes. Several natural objects were located and used for signals in connection with the hydrographic survey. These signals could be used for navigation purposes by small craft sailing within a mile or two of the shore.

Derby Hat Rock - A large rock resembling a derby hat, visible only when within about two miles of it. This rock is smaller than some others close by; but made an excellent hydrographic signal.

Dance Hall - A large, unpainted, frame structure close to the Bandon Beach. This object is visible only when to the south of it.

In addition to these, several wooden signals were built and located later by the topographic survey. These were Dot, White, Front Range, and Rear Range. The last two were built in order to control the survey for the laying of the cable and hydrophone at Blanco radion acoustic ranging station

The Coast Guard Lookout station was also located but being so close to both the Dance Hall and Spur, its usefulness as a hydrographic signal was lessened.

The lagoons along the shore are shifting continually and small streams break through to the ocean at different times. These streams last only a short time and then all trace of them is gone.

Many fresh water springs and small streams were found along this section of the coast

WASHINGTON      October 9, 1925.

SECTION OF FIELD RECORDS

Report on Topographic Sheet No. 4110

Blacklock Pt. to Coquille River, Ore.

Surveyed in 1924

Instructions dated April 29, 1924.

Chief of Party, R. F. Luce.

Surveyed and inked by H. B. Brown.

1. The records as well as the plan and character of the survey conform to the requirements of the General Instructions, except for the omission of a magnetic meridian.
2. The plan and extent of the survey satisfy the specific instructions.
3. The junction with the adjoining sheet on the north is satisfactory.
4. No further surveying is required within the limits of the sheet, except that as noted in the descriptive report additional surveying should have been done at the mouth of the Coquille River.
5. The character and scope of the surveying and field drafting are excellent.
6. Reviewed by E. P. Ellis, October, 1925.
