Contour, Approximate contour, Form line interval 0 - - feet

Instructions dated May 16, 1935., 19

Remarks: None.

GENERAL INFORMATION

Statistics:

The total land area covered by this sheet is 13.7 square statute miles. The total length of the outside coast shoreline is 9.2 statute miles. There are 33.0 statute miles of River shoreline more than 200 meters from the nearest opposite shore, and 64.8 statute miles of streams and sloughs less than 200 meters wide.

General Topographic Information:

The general description of the area covered by this sheet, along with adjoining sheets of this series, is of low coastal plane type with very little relief. The coastal shoreline in general is very regular, being broken only by a few small inlets. Just inside the coastal shoreline we find a strip of ground slightly elevated, and approximately 75 to 400 meters wide, which has been classed as beaches and sand dune. The dune area is interspersed with small patches of marshy ground and the only vegetation afforded is grass and scrub bushes. Between the dune area and the mainland is a vast area comprised of marshes, bays, therofares, creeks and numerous sloughs and ponds. Any number of islands also appear in this area; some of which are practically covered at high water. On the larger islands are found ponds which are usually surrounded by sand upon which grows grass and bushes. The only solid ground appearing on this sheet is the extreme southern part. The street system represents the town of Brigantine and its subdivisional development.

Report:

The general report is listed under "General Topographic Information."

Photographs:

Photographs from part of four flights were used in the compilation of this sheet.

Flight No. 66 - 6 with photos No. 77 - 80 inclusive, began at Little Egg Inlet, ran south parallel to the coastline to the entrance of Great Thorofare. This flight was made April 15, 1932.

Flight No. 66 - 11 with photos 84 - 88 inclusive, began at the northwest end of Salt Island and ran southeast to Brigantine's Coast Guard Station. This flight was made April 20, 1932.

Flight No. 66 - 11 with photos No. 94 - 97 inclusive, began at triangulation station "Shack" and ran northwest to the northwest end of Shad Island. This flight was made April 20, 1932.

Flight No. 66 - 55 with photos No. 4-16 inclusive, began at Brigantine and paralleled the coastline to Great Egg Inlet. This flight was made August 1, 1932. Only one photo of this flight was used in this compilation. All photos were taken with a Standard Single

headed. Interpretation is not clear.
The mean High Water line on the
outer coast from Little Egg Inlet to
lat 39°28' was located on T 6401 A May 1935.
The mean High Water line from lat 39°28'
to lat 39°26.1' including Brigantine Inlet
was located on T 6501 B July 1935. This
area is very changeable as discussed on
page of descriptive report T 6501 B.
The High Water line mouth of lat 39°26.1'
was determined by field inspection
on in July 1935.

lens camera, operated by the Sero Service Corporation of Philadelphia, Pa.

All photos are very good as to scale but seem to be blurred. Therefore, much difficulty was had in transferring detail, but with assistance from the field party, along with inspection by the compiler, it is felt that all difficulties have been cleared up and no appreciable error will be found. These photos were made some three years ago and drastic topographic changes have taken place along the coast shoreline and inlets but this matter will be discussed later in this report.

CONTROL

Sources:

Triangulation by B. H. Rigg - 1935 and R. C. Bolstad - 1935. All on North American 1927 datum.

Errors:

No errors was found in the plotting of control or radial plot.

Discrepancies:

No control stations established by other organizations were used in the compilation of this sheet.

Method:

The standard radial line method was used as described in the U. S. Coast and Geodetic Survey notes on the compilation of planimetric line maps from Single Lens Aerial Photographs.

Adjustment of Plot:

No unusual adjustment was had in making the radial plot. Triangulation station "Big Shad" was not held to in making the plot due to the fact that spoils around this station obliterated the possibility of making accurate measurements in the field, therefore it could not be spotted correctly on the photo.

Interpretation:

Since the photos were made three years previous to the compilation, we find the coast line has eroded to such an extent that a plane table survey was necessary to determine the exact high water line. ~~This survey has been made from Little Egg Inlet, south to Brigantine Channel.~~ When the photos were too indefinite to compile an actual high water line, a survey was made and this survey will be shown on the over-lay sheet by dashed lines. It is presumed that exceedingly high waters and storm tides caused the eroding of the beach area, as the interior seems fairly well preserved. Where the high water line could not be defined on the photos, ~~no survey was made, the broken dash lines indicate the~~

[illegible]

Brigantine Hotel, was determined by measurements from object on the photos to the high water line. However, a plane table survey over part of this area was made later and checked remarkably well. Consult photo 66-11 - 88 for more information. Along the northeast, east and southeast part of Fullen Island the high water line as shown, although obtained by a plane table survey, is subject to frequent changes and should not be firmly relied upon. The prevailing conditions of this area are such that a small rise in elevation of the tide will move the present high water line inland by several hundred meters. The low water line obtained by the same survey should be within the required limit of accuracy as it was ~~gotten~~ ^{taken} at approximate low tide. The low water line just south of Lat. $39^{\circ} 27'$ and east of Long $74^{\circ} 20'$ was not obtained by a survey but was detailed in accordance with other prevailing low water lines. A cable crossing is shown by a dashed line across Little Egg Inlet. This cable was from a point on Salt Island N.E. to triangulation station "Cable". Since we have the location of the last pole on Salt Island we get our authority to show the crossing. Submerged cable.

Sea walls have been built along the coast to preserve the beaches since the photos were made and will be shown on the overlay sheet. One small dock, just west of Triangulation station "Brigantine Beach Water Tank" (North of) does not appear on the photo. The subdivisional development, northwest of Brigantine, upon field inspection, shows an unkept seawall around the entire area, with a golf course on the left as you enter to the clubhouse, which is near the bank of Obé's Thorofare. The roads are not paved. All buildings have been shown that could be clearly seen on the photo. Street names of Brigantine and the surrounding development will be found on a map accompanying this sheet.

All symbols were taken from the Topographic manual.

Information from Other Sources:

Graphic Control sheets No. "P" Reg. No. T 6401 a
 "S" Reg. No. T 6501 b, "T" Reg. No. T 6501 a, and "U" Reg. No. T 6502 b.

Field inspection by Lieutenant B. H. Rigg and Lieutenant (j.g.) E. H. Kirsch, and the compiler. *July 1935*

Conflicting Names:

There are no conflicting names on this sheet.

Comparison with other Surveys:

A comparison with U. S. Coast and Geodetic Survey Chart No. 1217 has been made and the Topographic Changes discussed previously in this report.

Junctions:

Satisfactory junctions have been made with sheet No. 4 Reg. No. T 5637 on the South. Sheet No. 1, Reg. No. T 5634 on the West. Atlantic Ocean on The East and Great Bay on the North.

Landmarks:

A list of landmarks for charts and marked Topographic Stations will be submitted with Graphic Control sheets mentioned previously in this report by Lt. B. H. Rigg, Chief of Party 1935.

Recommendation for Further Surveys:

The compilation of this sheet is believed to be accurate, thorough, and complete for charting purposes and no additional surveys are necessary. A probable error of not more than .3 mm may be found in detail of importance and not more than .6 mm for detail of lesser importance.

CONTROL

Sources

Triangulation by C. D. Meaney 1932, C. G. Quillian 1903
and R. W. Woodworth 1931.

Landmarks

Lieutenant J. A. Bond, Chief of Party 1936, will also
submit additional landmarks for charts and marked topographic
stations, covering the area of this sheet.

Information from other sources.

The additional information that has been added to the
compilation since the press plate was made has been shown in
red ink on a copy of the advance print. These changes include
the 1936 location of the lights and beacons and minor changes
in the shoreline for agreement with the hydrographic sheet.
The changes were in areas where the image was very indistinct
on the photographs and in several cases a new location of the
shoreline was obtained with the planetable. The 1936 location
of landmarks for charts and marked topographic stations were
also added to the sheet.

REVIEW OF AIR PHOTO COMPILATION T-5635
Scale 1:10,000

Data Record

Triangulation to 1935
Photographs to 1932
Planetable surveys to 1936
Hydrography to 1936
Field inspection to 1935

*refer to page 2 of the
descriptive report regarding
method of location of the m.h.v. line
on the outer coast.*

The detail on this compilation is that of the date of the photographs except for changes along the shoreline as determined by field inspection and 1935 and 1936 planetable surveys

Comparison with Contemporary Graphic Control Surveys

T-6401a (1935 and 1936), 1:10,000
T-6501a (1935 and 1936), 1:10,000
T-6501b (1935 and 1936), 1:10,000
T-6502b (1935 and 1936), 1:10,000

The above graphic control surveys are in agreement with the compilation.

All detail and information shown on the above graphic control surveys is shown on the compilation except temporary topographic signals and the magnetic meridians.

Comparison with Contemporary Hydrographic Surveys

H-5893 (1935), 1:10,000
H-6144 (1936), " "
H-6145 (1936), " "

REVIEW OF AIR PHOTO COMPILATION NO. T-5635

Chief of Party: E. H. Kirsch

Compiled by: T.P. Mitchell

Project: HT - 205

Instructions dated: May 16, 1935.

1. ✓ The charts of this area have been examined and topographic information necessary to bring the charts up to date is shown on this compilation. (Par. 16a, b,c,d,e,g and i; 26; and 64)
2. ✓ Change in position, or non-existence of wharfs, lights, and other topographic detail of particular importance to navigation which affect the chart, is discussed in the descriptive report. (Par. 26; and 66 g,n)
3. ✓ Ground surveys by plane table, sextant, or theodolite have been used to supplement the photographic plot where necessary to obtain complete information, and all such surveys are discussed in the descriptive report. (Par. 65; and 66 d,e)
4. ✓ Blue-prints and maps from other sources which were transmitted by the field party contain sufficient control for their application to the charts. (Par. 28)
5. ✓ Differences between this compilation and contemporary plane table and hydrographic surveys have been examined and rectified in the field before forwarding the compilations to the office and are discussed in the descriptive report.
6. ✓ The control and adjustment of the photo plot are discussed in the descriptive report. Unusual or large adjustments are discussed in detail and limits of the area affected are stated. (Par. 12b; 44; and 66 c,h,i)
7. ✓ High water line on marshy and mangrove coast is clear and adequate for chart compilation. (Par. 16a, 43, and 44)

NOTE: Strike out paragraphs, words or phrases not applicable and modify those requiring it. Paragraph numbers refer to those in the Topographic Manual. Refer also to the pamphlet "Notes on the Compilation of Planimetric Line Maps from Five Lens Air Photographs."

8. The representation of low water lines, reefs, coral reefs and rocks, and legends pertaining to them is satisfactory. (Par. 36, 37, 38, 39, 40, 41)
9. Recoverable objects have been located and described on Form 524 in accordance with circular 30, 1933, circular letter of March 3, 1933, and circular 31, 1934. (Par. 29, 30, and 57)
10. A list of landmarks was furnished on Form 567 and instructions in the Director's letter of July 16, 1934, Landmarks for Charts, complied with. (Par. 16d, e; and 60)
11. All bridges shown on the compilation are accompanied by a note stating whether fixed or draw, clearance, and width of draw if a draw bridge. Additional information of importance to navigation is given in the descriptive report. (Par. 16c)
12. Geographic names are shown on the overlay tracing. The accepted local usage of new names has been determined and they are listed in the report, together with a general statement as to source of information and a general statement as to source of information.

- ✓ 3. All station points are exactly marked by fine black dots.
- ✓ 4. Closely spaced lines are drawn sharp and clear for printing.
- ✓ 5. Topographic symbols for similar features are of uniform weight.
- ✓ 6. All drawing has been retouched where partially rubbed off.
- ✓ 7. Buildings are drawn with clear straight lines and square corners where such is the case on the ground.

(Par. 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 48)

✓ 16. No additional surveying is recommended at this time.

✓ 17. Remarks:

✓ 18. Examined and approved;

E. H. Kirsch
Chief of Party

19. Remarks after review in office:
