STATISTICS (III)

Land Area (Sq. Statute Miles):

Shoreline (More than 200 meters to opposite shore): 2 Statute Tiles

Shoreline (Less than 200 meters to opposite shore): 16 2/3 Statute Miles Measured along the center line of creeks

Number of Recoverable Topographic Stations established: k_i by radial intersection

Number of Temporary Hydrographic Stations located by radial plot: 32

Leveling (to control contours) - miles;

Roman numberals indicate whether the item is to be entered by,

(II) Field Party, (III) Compilation Party, or, (VI) the Washington Office.

When entering names of personnel on this record give the surname and initials (not initials only).

Remarks:

Pield inspection data for the area of 75085 are

26 CONTROL:

The horizontal control, shown on the Map Drawing with the conventional triangulation symbol, consists of 5 U.S. Coast & Geodetic Survey triangulation stations, all of which fall outside the detail limits. The names of the stations are as follows:

* BRAND, 1938, r.1942 (not used)
BRANDON BOATHOUSE, FLAGPOIE, 1938, r.1942
BRANDON WHARF LIGHT, 1938, r.1942
CLAREMONT, 1932, r.1942
WARTHAM, 1932, r.1942
Falls on 7-8077
Falls on 7-8077

*Station not used to control the radial plot, because no field inspection data were furnished for identification.

27 RADIAL PLOT:

An individual radial plot was laid for the area of Map Drawing, Survey No. T-8085. No Celluloid templets were used. The results obtained were satisfactory, and the facts concerning the plot have been fully brought out in appendices "A" and "B" of the descriptive report for Map Drawing Survey No. T-8083, previously submitted.

28 DETAILING:

The shore line and immediate adjacent topographic features have been compiled in accordance with the written instructions.

The main bodies of water shown on the Map Drawing are portions of Chipponkes and Wards Creeks.

All important features have been detailed in accordance with the field inspection data, and shown on the Map Drawing with the conventional symbols.

The distribution of the photographs and the photographic coverage were adequate.

23 <u>DETAILING</u>: (Continued)

Since all notes pertaining to the area of the Survey were lettered on the l'ap Drawing, no overlay sheet was necessary.

30 <u>PEAN HIGH-MATER LINE:</u>

The Mean High-Mater Line has been shown on the Map Drawing with a full heavy-weight black acid ink line, while the outer limits of marsh areas bordering the Mean High-Mater Line have been shown with a full light-weight black acid ink line. The light-weight line is not considered to be the position of the Mean High-Mater Line, but is only an indication of the outer limits of marsh areas visible on the photographs.

A dashed black acid ink line indicates that portions of the shore line were not clearly visible on any of the photographs because of overhanging trees growing along the tanks of the creeks, or vegetation growing out into the water.

31 LOT-MATER AND SMOAL LIMES:

Although the photographs were taken at a stage of tide between $\frac{1}{2}$ foot and 1 foot above Mean Low-Mater, there appeared to be no part of the actual Mean Low-Mater Line on this Map Drawing which could be delineated with confidence, either from field inspection data or examination of the photographs.

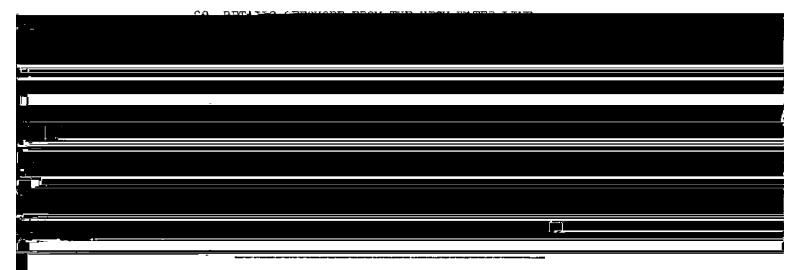

Grass-in-water areas, bordering the outer limits of definite marsh areas and firm Yean Figh-Mater Line, have been shown on the Map Drawing with the conventional symbol.

The offshore limits of shoal areas have been shown with dashed light-weight black acid ink lines. The note "shoal" has been lettered on the Jap Drawing for identification of the shoal areas.

The offshore limits of mud areas have been shown

31 IOWWATER AND SUCAL LINES: (Continued)

with dotted black acid ink lines. The note "mud" has been lettered on the "ap Drawing for identification of the mud areas.

The Field Inspection Sub-Party verified the existence of several submerged logs, a fish trap, and some piling. Since the images of these objects were not visible on any of the photographs, the outlines of the approximate areas in which they were believed to be situated, were shown on the Map Drawing with dashed black acid ink lines, accompanied by descriptive notes. Further investigation by the operating hydrographic party of the above-mentioned features is recommended.

33 WHARVES AND SHORELIME STRUCTURES:

All piers or wharves, fallen trees, piling, rows of stakes, etc., immediately adjacent to the offshore side of the Yean High-Mater Line or bordering marsh areas, have been shown on the Yap Drawing with the conventional symbols, accompanied by descriptive notes.

34 LANDMARKS, AIDS TO MAVIGATION, AND AERCHAUTICAL AIDS:

No charted landmarks or fixed aids to navigation appear within the area of the Map Drawing. No new landmarks, fixed aids to navigation or aeronautical aids, were recommended by the Field Inspection Sub-Party.

35 PYDROGRAPHIC CONTROL:

The radially plotted positions of 32 temporary hydrographic stations, and of 4 recoverable topographic stations, have been shown on the dull side of the Pap Drawing with 21 mm. black acid inh circles. On the

35 HYDROGRAPHIC CONTROL: (Continued)

small green ink circles. The numbers and descriptions of the temporary hydrographic stations, and the numbers, names and descriptions of the recoverable topographic stations have been lettered on the Map Drawing. The recoverable topographic stations can be identified by the note "recoverable topographic station" lettered on the Map Drawing.

A list of the stations is attached here to the stati

Form No. 524-has been submitted for the following four (4) recoverable topographic stations: Filed in Div. of Photogrammetry Ameral files.

No. 357 Lone Cypress - Near Edge of Woods

No. 368 Tallest Cypress Near Point

No. 371 W. Gable Two Story White House

No. 426 Bushy Cypress.

37 JUNCTIONS:

Junctions of shoreline and immediate adjacent culture, with Map Drawings, Surveys Nos. T-8084 to the North, and T-8078 to the East, are in excellent agreement.

There are no contemporary surveys to the South or West.

38 RECOMMENDATIONS FOR FUTURE SURVEYS:

The shore line, rough draft, Map Drawing, Survey No. T-8085, is believed to be complete in all details of importance for charting, and no other surveys are deemed necessary.

The relative detailed positions of important physical and cultural features are believed to be within the limits of satisfactory accuracy.

39 GEOGRAPHIC NAMES: 414

A partial investigation of geographic names was made for the area of this Map Drawing, by the 1942 Field Inspection Sub-Party, and submitted to this Compilation

39 GEOGRAFHIC MAUTS: (Continued)

Office in the form of notes in a copy of the "U.S. Coast Pilot."

The geographic names shown on the Map Drawing are in accordance with the field inspection data, except in areas not included in the investigation. In such areas, the names shown have been taken from the best known sources available for use by this Compilation Office.

The disruted and undisputed names have been alphabetically compiled in two lists and are submitted herein. Approved by Keographic Marries Lection

44 COMPARISCH WITH EXISTING TOPOGRAPHIC QUADRAMGLES:

Disputanta, Virginia Quadrangle (15') U.S. Geological Survey, 1919 edition, reprinted 1938, scale 1:62,500.

Due to the large difference in scale, small planimetric details could not be readily compared. However, the following differences were apparent:

- * At approximately Latitude 37° 14' 47" and Longitude 77° 01' 00", a pond has been shown on the Tap Drawing, which does not appear on the quadrangle.
- * At approximately Latitude 37° 12' 03" and Longitude 77° 02' 15", a pond has been shown on the Map Drawing, which does not anyear on the quadrangle.

Three small tributaries of Wards Greek that appear on the quadrangle have not been shown on the Map Drawing, because no field inspection data were furnished for them, and because their images were not visible on any of the photographs.

* The limits of the marsh areas along the

44 CCIPARISCI THE EXISTITE TOTOGRAPHIC QUADRATGLES:

southern portion of Chipponkes Creek, as shown on the Map Drawing, are in disagreement with the limits of the marsh areas appearing on the quadrangle.

- * Several small piers have been shown on the Pap Drawing that do not appear on the quadrangle.
- * These differences also apply to Chart Vo. 530.

45 CCITARISCH WITH MAUTICAL CHARTS:

Chart No. 530, published September 1940, corrected to Harch 25, 1942, Scale 1:40,000.

Due to scale difference, small planimetric details could not be readily compared. The following differences, however, were apparent:

At approximately Latitude 37° 12' 30" and Longitude 70° 01' 08", two small islands appear on the chart, within a mud area, which have not been shown on the Map Drawing.

No comparison in the area of 'Mards Creek could be made as it does not appear on the chart.

The differences discussed under side heading No. 44 that have been indicated with asterisks, also apply to the above-mentioned chart.
