Completion Surveys by (II): None

Date:

Mean High Water Location (III) (State date and method of location):

MHWL on these three quads might be dated 1948 since they were compiled using 1948 field-located shoreline as a guide. However, it was compiled using 1951 photos and therefore could be considered as a 1951 MHWL, and should be for all practical purposes.

Projection and Grids ruled by (IV):

Compiled at 1:20,000 scale, from 1:20,000 scale nine-lens photographs taken July, 1950 and June, 1951. For additional nine-lens photography refer to: Air-photo Index A-38 (1:20,000 scale, taken September 1947) Air-photo Index B-3 (1:28,000 scale taken Sept. 1947) Air-photo Index B-13 (1:20,000 scale, taken September 1947 and August 1948)

For single-lens photography on which some field work was done refer to: Air-photo Index A-11 (1:27,500 scale, taken August 1948) Air-photo Index A-23 (1:27,500 scale, taken August, 1948, and 1:40,000 scale, August, 1950) Air-photo Index A-24 (1:27,500 scale, August, 1948) Air-photo Index A-36 (1:40,000 scale, August, 1950)

For photography of other agencies on which some field work was done refer to: Alaskan WAC 64 Index (1949 Naval Petroleum Reserve photography, scale 1:20,000 and 1946 Air-Force TRI-MET photography, scale 1:24,000)

Summary to Accompany T-9472 through T-9474

Ph-28(47) covers the eastern shore of the Chukchi Sea in Alaska and runs from Candle on the Kiwalik River on the south to Cape Beaufort to the north.

There are ninety-four topographic quadrangles (T-9402 to T-9434 and T-9436 to T-9496) in this project.

T-9472 through T-9474 are topographic surveys which border on the southeasterly portion of Hotham Inlet and on the northwestern portion of Selawik Lake.

Each map manuscript consists of one sheet, $7\frac{1}{2}$ minutes in latitude and 20 minutes in longitude, at a scale of 1:20,000, with a contour interval of 50 feet. A ~~cloth-backed lithographic~~ *litho - covered* print of each map at the compilation scale will be registered with the descriptive report in the Bureau of Archives.

FIELD INSPECTION REPORT

(2P)

2-20:

See separate report entitled:

PROJECT REPORT

AERIAL PHOTOGRAPH CONTROL AND INSPECTION

KOTZEBUE SOUND, ALASKA

Project Ph-28(47) July to Sept 1948

A. Newton Stewart, Chief of Party

RADIAL PLOT REPORT

21-30:

See Descriptive Report for quads T-9468 and T-9469, a combined report. The Radial Plot/^{Report}therein covers the three quads of this report also, and is not repeated here.

COMPILATION REPORT31. Delineation:

The entire area of the three quads of this report has been delineated on the Reading Plotter, model "B", in a single operation.

32. Control:

According to side-heading 23 of the Radial Plot Report, there was adequate horizontal control for a satisfactory plot. The vertical control was also adequate with the majority of the land area being very close to sea-level datum in the extensive Kobuk River delta. In addition, three V-stations were established by the field party and elevations computed for them after the plot had fixed horizontal distances to them; V-1111 and V-1113 on T-9473, V-1107 on T-9474, and none on T-9472.

33. Supplemental Data:a. Field Inspection Photos:

20853, 20854, 20855, 20856, 20890, 20691, 20692, 20693.

b. Elevation computations:

"TABULATION OF ELEVATIONS AND COMPUTATIONS OF ELEVATIONS BY MAP MANUSCRIPTS FOR VERTICAL CONTROL STATIONS IN THE AREA OF MAP MANUSCRIPTS T-9462, T-9463, T-9466, T-9467, T-9470, T-9471, and T-9475."

34. Contours and Drainage:

The instrument photographs were of very good photographic quality and no areas of questionable contours are left.

35. Shoreline and Alongshore Details:

Shoreline inspection was adequate considering the marshy and unstable nature of the shoreline in this river delta area. For this same reason no distinction has been made on the manuscripts between apparent and definite shoreline. No low-water or shoal lines were delineated, field or office.

36. Offshore Details: Not applicable.37. Landmarks and Aids: None recommended - none exist.38. Control for Future Surveys:

Three Topo stations and no Hydro stations were selected and photo-identified in the field, and have been located by the radial plot; FAWN, 1948, FACE, 1948 on T-9472, and POLE, 1948 on T-9474. See sub-heading 49.

39. Junctions:

All junctions are in agreement since these sheets have been compiled simultaneously with all adjoining quads as shown on page 5, the project layout diagram.

40. Horizontal and Vertical Accuracy:

The three maps of this report are at a scale of 1:20,000 and they meet the requirements specified by map standards for maps of that scale. These maps are compiled to meet the requirements for 50ft contour interval, but because of the lack of relief in the area the 25ft supplemental has been delineated also. It is believed these 25ft contours are accurate to half 25ft, but this should not detract from the fact that these maps are considered to be 50ft contour maps.

46. Comparison with Existing Maps:

No maps of comparable scale exist; the following map does cover the same area:

"SELAWIK, Alaska, Alaska Reconnaissance Topographic Series, Second Judicial Division, USGS, 1:250,000, 1951 edition."

47. Comparison with Nautical Charts:

No chart of comparable scale exists; the following chart does cover the same area:

"ARCTIC COAST, Alaska, No 9400, 1:1,587,870, May 1946, 6th edition, last correction date of 27 Nov 1950."

48. Geographic Name List: See next numbered page, page 11.49. Notes for the Hydrographer: See unnumbered page following.50. Compilation Office Review: See page 12 following.
