SUMMARY FOR T-9581-85, T-9589-93

These topographic surveys ^{are ten} ~~to the~~ of a series of 49 quadrangles, each $7\frac{1}{2}$ minutes in latitude and 15 minutes in longitude at 1:20,000 scale that cover ST. LAWRENCE ISLAND, ALASKA.

This BERING SEA island is approximately 100 miles long and averages 20 miles in width and has not been previously mapped at this large scale.

ST. LAWRENCE ISLAND is within the CAPE NOME DISTRICT of the SECOND JUDICIAL DIVISION.

The maps of this island are to be published at 1:25,000 scale by the Army Map Service.

For information concerning the project in its broader aspects see the project completion report which will include, among other items, two detailed field reports - a preliminary report dated 21 September 1950 and a project report dated June-September 1950 - both submitted by Fred A. Riddell.

The registered data to be permanently filed in the Bureau Archives under these ^{numbers} ~~maps~~ will include a cloth-mounted lithographic print of each map manuscript at 1:20,000 scale together with a cloth-mounted ^{combined} ~~published~~ color print at 1:25,000 scale and the original ^{combined} ~~descriptive~~ report.

1

PHOTOGRAMMETRIC PLOT REPORT

FIELD INSPECTION REPORT

See project report of Fred. A. Riddell for season June-September 1950, under separate cover.

21. AREA COVERED

T-9581, T-9582, T-9583, T-9584, T-9585, T-9589, T-9590, T-9591, T-9592, and T-9593.

22. METHOD

Both horizontal and vertical control was bridged in the area by multiplex. This work was done on the 1:10,000 work sheets. See attached sketch of control which shows several base strips furnished by the Washington Office from work done on the stereoplanigraph. These additional horizontal and vertical pass points were used as starting points for the multiplex bridging. Refer also to Photogrammetric Plot Report for T-9575, item 22, paragraphs 1, 2, and 3.

23. ADEQUACY OF CONTROL

Control complied with project instructions and was adequate.

24. SUPPLEMENTAL DATA

None.

25. PHOTOGRAPHY

See Photogrammetric Plot Report for T-9575, item 25.

26. ACCURACY

It is believed that the requirements for horizontal accuracy of the Coast and Geodetic Survey have been met.

It is very difficult to state what vertical accuracy was obtained in an assignment of this kind. For a normal mapping project, at the scale compiled, with vertical control in each model it could be expected that 90% of the contours would be

26. ACCURACY (continued)

within 10 feet. In view of the necessity for vertical bridging in the first place plus the inadequacies of the photography which adversely affected the accuracy of the work, it is felt that if the contours are within 25 feet it is as good as could be expected. In some instances the error may be as much as 50 feet.

Respectfully submitted
29 February 1952.

Henry P. Eichert
Supervisory Cartographer

COMPILATION REPORT

SURVEYS Nos. T-9581, T-9582, T-9583, T-9584,
T-9585, T-9589, T-9590, T-9591,
T-9592, and T-9593

31. DELINEATION

Most of the topography, including shoreline and photo points, was plotted by multiplex except for those areas done at the Washington Office using the stereoplanigraph and Kelsh Plotter. See sketch of control accompanying Photogrammetric Plot Report. Multiplex work was done on 1:10,000 work sheets. The shoreline was later refined using ratio prints furnished by the Washington Office. These work sheets were submitted to the Washington Office for photographic reduction and assembly into 1:20,000 scale manuscripts.

32. CONTROL

See Photogrammetric Plot Report, item 23.

33. SUPPLEMENTAL DATA

None.

34. CONTOURS AND DRAINAGE

The drainage pattern did not always seem well-defined. The compilation office tried to show this as accurately as possible with a minimum of confusing details.

35. SHORELINE AND ALONGSHORE DETAILS

The MHWL line except for areas compiled at the Washington Office was established by multiplex with the aid of a limited amount of field inspection.

36. OFFSHORE DETAILS

None.

37. LANDMARKS AND AIDS

Data believed to be complete. Forms 567 submitted with this report.

38. CONTROL FOR FUTURE SURVEYS

Forms 524, submitted herewith, are for topographic stations established by instrument compilation. These are as follows:

<u>T-9581</u>	<u>T-9589</u>
ARGO, 1950	EBON, 1950
DUCK, 1950	MAGI, 1950
ROCK, 1950	ONUS, 1950
<u>T-9583</u>	<u>T-9591</u>
SOOT, 1950	~~BHZZ, 1950~~
<u>T-9584</u>	<u>T-9592</u>
CAPE, 1950	CLUB, 1950
RUNT, 1950	DAVE, 1950
<i>Omar 1950</i>	<i>BUZZ 1950</i>
<u>T-9585</u>	<u>T-9593</u>
CABIN, 1950	FISH, 1950

One topographic station, OMAR, 1950, for which form 524 is also submitted was established by theodolite. This is on manuscript T-9584.
Div. Photogr. general files.

A list of recoverable topographic stations and descriptions of photo hydro stations are included in paragraph 49 of this report.

39. JUNCTIONS

Junctions have been made between all work sheets and where the work at the Baltimore Office joined work done at the Washington Office. Thus, when work sheets are assembled into manuscripts, junction between manuscripts is assured.

A tie has been transferred from our work sheets at the east (T-9585 and T-9593) to work sheets in the 1951 seasons work and a datum shift has been applied (NA 1927) so that a tie will be effected with our new work.

40. HORIZONTAL AND VERTICAL ACCURACY

See item 6 of Photogrammetric Plot Report.

41. thru 45.

Inapplicable.

46. COMPARISON WITH EXISTING MAPS

Comparison was made with USGS map, scale 1:250,000, printed in 1949.

47. COMPARISON WITH NAUTICAL CHARTS

Chart No. 9302, scale 1:1,534,076 at lat. 60° 00' published July 1945 (16 edition), 8-29-49.

Items to be applied to nautical charts immediately:

None.

Items to be carried forward:

None.

After completion of the hydrographic surveys, these quadrangles should supersede all previously charted information.

Respectfully submitted
3 March 1952.

Henry P. Eichert
Supervisory Cartographer

T-9589

CRY - Top of rock
GAG - Center of rock
HOG - Face of bluff at pt. of break
in grade
NOB - Top of pinnacle rock
ROC - Center of rock outcrop
YAP - Part of break in grade.

T-9584

BIG - North gable of cabin.

Special attention is called to the special volume Part 2 of the Project Report containing "jumbo" size prints of topographic and hydrographic stations prepared for the use of the hydrographic party.

DEPARTMENT OF COMMERCE
U. S. COAST AND GEODETIC SURVEY

NONFLUATING AIDS OR LANDMARKS FOR CHARTS

TO BE CHARTED
~~FOR BOUND EDITION~~

STRIKE OUT ONE

Baltimore, Md.

February 1952

I recommend that the following objects which ~~have~~ *(have not)* been inspected from seaward to determine their value as landmarks be charted on *(deleted from)* the charts indicated.

The positions given have been checked after listing by

Albert K. Heywood

Hubert A. Paton Chief of Party.

[illegible]

This form shall be prepared in accordance with Hydrographic Manual, pages 800 to 804. Positions of charted landmarks and *nonfu*
aids to navigation, if redetermined, shall be reported on this form. The data should be considered for the charts of the area and
individual field survey sheets. Information under each column heading should be given.

Review Report
Topographic Maps T-9581-85 and T-9589-93
3 September 1953

62. Comparison with Registered Topographic Surveys:
There are no prior surveys for the area covered by these maps.
63. Comparison with Maps of other Agencies:
St. Lawrence, Alaska, U.S.G.S., 1:250,000 Reconnaissance Map, 1949. Contours, drainage and other features generalized at the scale of the above reconnaissance survey preclude detailed comparison.
64. Comparison with Contemporary Hydrographic Surveys:
None
65. Comparison with Nautical Charts:
9302 1:1,534,076, corrected to 12/8/52
No effective comparison can be made between the chart and the maps because of the lack of detail on the very small scale chart.
66. Adequacy of Results and Future Surveys:
These maps are adequate for use in hydrographic surveys and the construction of nautical charts. It is concluded from the amount and distribution of horizontal and vertical control that these maps meet the National Standards of Map Accuracy.
67. Datums:
The original compilations were based on the St. Lawrence Island (Gambell) Astrolabe Datum. After review and during final drafting these compilations ~~will be~~ transferred to the North American 1927 Datum. (unadjusted) ^{were}
68. Contours:
Supplemental contours at 25-foot intervals, in addition to the regular or intermediate contours at 50-foot intervals, are shown. With reference to supplemental contours, only those contours that give significant information or express certain topographic features not otherwise evident are shown. The first 25-foot contour in from the shoreline, except along steep, rocky bluffs where contours tend to merge, is shown throughout the island.
