SUMMARY TO ACCOMPANY
DESCRIPTIVE REPORT TP-00276

This 1:10,000 scale shoreline manuscript has its sheet limits entirely within the boundaries of TP-00271 a 1:20,000 scale sheet. It is one of nine 1:20,000 scale and four 1:10,000 scale shoreline manuscripts that comprise Project PH-7101, Charleston, SC to Savannah, GA. Project PH-7101 is one of several projects that make up SCOPE, the Southern Coastal Plains Expedition. It is not a standard shoreline survey because compilation was limited to the ocean shoreline and only a limited amount of interior detail. Shoreline of bays, inlets, canals or rivers that may be within the geographic limits of this map were not delineated. This deviation from written instructions was brought about by verbal instructions telephoned from the Rockville Office to the Chief, Coastal Mapping Section, AMC.

Field work prior to compilation consisted of taking one reference measurement to the mean high and mean low water lines and premarking horizontal control required for bridging.

Aerotriangulation was done in the Rockville Office on the 1:40,000 scale color photography dated November 1970. Pass points common to the 1:30,000 scale infrared mean high and mean low water photography were dropped for ordering ratios.

Compilation was done at the Atlantic Marine Center in January 1974. The Wild B-8 Plotter, utilizing the 1:40,000 scale color bridging photography, was used to compile inshore planimetry and to drop shoreline pass points common to the 1:30,000 scale infrared tide controlled mean high and mean low water ratios. These ratios were then used to graphically compile the mean high and mean low water lines. The reference measurement referred to in paragraph 2 above was used to verify the photo interpretation of the mean high and mean low water lines.

Field edit was done in February 1974.

Final review was done at the Atlantic Marine Center in November, 1975.

The original manuscript is a stabilene sheet 5 minutes in latitude by 5 minutes in longitude.

A stable base copy and a negative of the final reviewed manuscript were forwarded for record and registry.

Photogrammetric Plot Report
Charleston to Savannah
South Carolina and Georgia
Job PH - 710F

21. Area Covered

This report covers nine 1:20,000 sheets, TP-00267, TP-00268, TP-00269, TP-00270, TP-00271, TP-00272, TP-00273, TP-00277, TP-00279 and four 1:10,000 sheets, TP-00274, TP-00275, TP-00276, and TP-00278 from Kiawah River, South Carolina, to Tybee Island, Georgia.

22. Method

Eight strips 1:40,000 scale color photography were bridged by analytic aerotriangulation methods and adjusted to ground on South Carolina South State Plane coordinate system. Bridge points were used on 1:30,000 scale infrared photography for ratioing photographs to be used in compiling the Mean Low- and Mean High-Water Line. Ratio prints of infrared photography covering Mean Low- and Mean High-Water were ordered. (One each of cronapaque). Tie points were used to augment datum between strips. Data for plotting manuscripts for compilation were assembled for ruling and plotting by the Coradomat and Calcomp.

23. Adequacy of Control

The horizontal control provided was adequate except for Fusky (USE) 1932 sub stations A and C, which held in strip one and did not hold in strip two, because of poor image points. Also, Chan, 1933, substation A and C did not hold in strip four because of poor image points.

All other control held within the accuracy required by National Standards of Map Accuracy at 1:20,000 and 1:10,000 scale.

24. Supplemental Data

U.S. Geological Survey quadrangles were used to provide elevations for vertical adjustments of bridges.

25. Photography

RC-8 color film positives were adequate as to coverage, overlay, and definition.

Submitted by,

Robert B. Kelly

COMPILATION REPORT

TP-00276

31. DELINEATION

This sheet was compiled graphically using 1971 infrared tide controlled photography controlled by photoidentifiable points plotted with the B-8. Both the mean high and mean low water lines were compiled using these photos. The interior detail was compiled using the B-8.

32. CONTROL

See the attached "Photogrammetric Plot Report," dated: Dec. 10, 1973.

33. SUPPLEMENTAL DATA

None

34. CONTOURS AND DRAINAGE

Contours are not applicable to the project. Drainage was delineated by the Wild B-8 stereoplotter and by office interpretation of the photographs.

35. SHORELINE AND ALONGSHORE DETAILS

Alongshore details were delineated by the Wild B-8 stereoplotter and by office interpretation of the photographs.

The mean high and mean low water lines were delineated from the tide controlled photographs.

36. OFFSHORE DETAILS

Offshore details were compiled from office interpretation of the photographs.

37. LANDMARKS AND AIDS

Copies of Form 76-40 for 1 landmark were forwarded to the Rockville, MD office on Mar. 25, 1974.

38. CONTROL FOR FUTURE SURVEYS

None

39. JUNCTIONS

See the attached Form 76-36b, item #5 of the Descriptive Report, concerning junctions.

40. HORIZONTAL AND VERTICAL ACCURACY

No statement required

46. COMPARISON WITH EXISTING MAPS

A comparison has been made with the following U.S. Geological Survey Quadrangle: HILTON HEAD, SC, dated 1956 (photorevised 1971), scale 1:24,000.

47. COMPARISON WITH NAUTICAL CHARTS

A comparison has been made with the following National Ocean Survey chart: 571, dated April 8, 1972, scale 1:40,000 17th ed.

FORESHORE CROSS-SECTIONS

CHARLESTON, SOUTH CAROLINA TO SAVANNAH, GEORGIA

JOB PH-7101

Sixteen foreshore cross-sections were taken between Folly Island, South Carolina, and Tybee Island, Georgia, a linear distance of approximately seventy miles. Twelve sections were positioned from triangulation and/or traverse stations and two sections, II and XIII, were located from photo points with sun azimuths. Section IX was located from a triangulation station using a photo point for an azimuth and section VII was run parallel to a relatively long pier.

Vertical control for sections I thru VI, VIII and IX was taken from the tide staff at Edisto Beach, South Carolina. Section VII was based on a temporary tide staff installed at Harbor River Entrance, South Carolina, and a temporary tide staff placed at Skull Creek (North Entrance) provided the control for sections X and XI. The remaining sections were based on the tide staff at Savannah River Entrance, Georgia.

The procedure, in establishing the TBM's used to control the individual sections, was to take a level reading on a recoverable object for use as a TBM, record it as a foresight, and then send the rodman into the water where the rod was used as a combination tide staff/level rod. After observing the water level on the rod for a period sufficient to determine a mean reading, a level reading was taken. The water level reading was subtracted from the level reading and the result entered in the field book as a backsight. Immediately, the instrument was moved, a new water level reading determined and another level reading obtained. Again the two were

back to the TBM to close the loop. The entries in the field book show

One typical section and three atypical sections were plotted to give the compiler an idea of what was done and to show the method of location. These sections, the field book, pricking cards, sun azimuths, color contact photographs and charts showing the individual section locations are included with this report.

FIELD EDIT REPORT

TP-00276

Hilton Head, South Carolina
PH-710151. METHODS

All field work was done in accordance with the AMC Manual, current Photo Instructions and Project Instructions OPR-436-WH-74, "Coasts of South Carolina and Georgia" dated November 16, 1973 addressed to Chief, Atlantic Hydrographic Field Party.

An inspection of all shoreline and alongshore features was made, and all deletions, additions, corrections and verifications are either shown or indexed on the field edit ozalid. All field edit notes are in violet ink.

New shoreline was determined by plane table and stadia and theodolite and stadia. The landmark was located by photogrammetric field methods. Three pilings were located by theodolite cuts.

52. ADEQUACY OF COMPILATION

Compilation of shoreline and alongshore features was generally adequate, except as noted below. Compilation will be complete when field edit notes are applied.

The shoreline at the north end of this manuscript (between Lat. $32^{\circ} 13.7'$ and $32^{\circ} 14.4'$) has changed dramatically since the 1970 and 1971 photography from which this sheet was compiled. A plane table traverse was conducted to determine a new mean high water line. Results are shown on the film ozalid.

Three pilings at Lat. $30^{\circ} 14.3'$, Long $80^{\circ} 40.4'$ are to be charted. Additional groins and seawalls to be compiled are noted on the field edit ozalid.

54. RECOMMENDATIONS

None.

56. GEOGRAPHIC NAMES

No geographic name discrepancies were found while editing this sheet.

57. LANDMARKS AND AIDS TO NAVIGATION

One landmark, Palmetto Dunes Water Tank, is recommended for plotting. Its position was accurately determined by Photo Party 62 in 1973, and this position is the one listed on the form 76-40. The tank was again located by photogrammetric field methods during this field edit, for verification purposes.

57. FIELD EDITORS

Field edit was done by Lt. (jg) Richard D. Black and Mr. Michael F. Sutphin of Photo Party 61.

Respectfully Submitted,

Richard D. Black

REVIEW REPORT TP-00276

SHORELINE

November 1975

61. GENERAL STATEMENT:

See Summary which is page six of this Descriptive Report.

A comparison print showing differences noted in paragraphs 62, 63, and 65 is bound with the original of this report.

62. COMPARISON WITH REGISTERED TOPOGRAPHIC SURVEYS:

A comparison was made with T-12810, scale 1:10,000, dated April 1966 and T-12619, scale 1:20,000, dated May 1966. Significant differences are shown in blue on the comparison print.

63. COMPARISON WITH MAPS OF OTHER AGENCIES:

A visual comparison was made with U.S.G.S. Quadrangle HILTON HEAD, SC, scale 1:24,000, dated 1956 (Photo-revised, 1971). Significant differences are shown in brown on the comparison print.

64. COMPARISON WITH CONTEMPORARY HYDROGRAPHIC SURVEYS:

A comparison was made with the reviewed boatsheet H-9314 (WH-20-3-73), scale 1:20,000, dated 1973. No differences were noted.

65. COMPARISON WITH NAUTICAL CHARTS:

The area covered by this map is within the limits of NOS Chart 11516, 19th edition, dated Nov. 1974, scale 1:40,000. A visual comparison was made and the significant differences are noted in red on the comparison print.

66. ADEQUACY OF RESULTS AND FUTURE SURVEYS:

This map complies with Project Instructions except as explained in Summary and meets the requirements for Bureau Standards and the National Standards of Map Accuracy.
