SUMMARY TO ACCOMPANY

DESCRIPTIVE REPORTS

TP-00836 through TP-00852

Project CM-7415 covers the Patapsco River and Baltimore Harbor from the mouth of the river at Long. $76^{\circ} 25'$ westward to and including the Inner Harbor. The part of Back River within the limits of Maps TP-00851 and TP-00852 is not included in the project and was not mapped. Seventeen maps - four at 1:10,000 scale and thirteen at 1:5,000 scale - are included in the project.

Field work prior to compilation consisted of recovery and pre-marking of horizontal control required for bridging. This work was done in September 1974.

Color photography was flown in October 1974. The entire area is covered by 1:30,000 scale photography, which was used for bridging and compilation of the 1:10,000 scale maps. Supplemental photography used for compilation of the 1:5,000 scale maps was flown at 1:15,000 scale. Black and white ratio prints at map scale were prepared from the color transparencies for office use and field edit operations.

Bridging was done by analytic methods in the Rockville Office in April 1975. See Photogrammetric Plot Report, which is Page 7 of this Descriptive Report.

Compilation was done by the Coastal Mapping Section at the Atlantic Marine Center from July to November 1975, using the Wild B-8 stereoplotter. The location of the mean high water line and other details were determined by office interpretation of the photographs.

Field edit was done by a photogrammetric field unit from September to November 1975 and applied to the manuscripts at the Atlantic Marine Center from December 1975 to February 1976.

All original manuscripts are stabilene sheets. The 1:5,000 scale maps are on a two and one-half minute format and the 1:10,000 scale maps are on a five minute format. The original manuscripts were forwarded to the Rockville Office for preparation of registration copies.

Photogrammetric Plot Report
Baltimore Harbor, Maryland
CM-7415
April 1975

21. Area Covered

The area covered by this report pertains to the shoreline of Baltimore Harbor, Baltimore, Maryland. This area is covered by thirteen 1:5,000 scale sheets, TP-00836 thru TP-00847, TP-00851,

22. Method

Five strips of 1:30,000 scale color photography were bridged by analytic aerotriangulation methods. Sketch number 1 shows the layout of the sheets, compilation photographs, strips of bridging photographs, and the location of field identified control. Ties were made between all bridging strips. The strips were controlled by field identified control paneled in 1974 with the inclusion of one office identified station as a terminal for strip two. Office identified control was floated as checks. Common points were located between the bridging photography and the compilation photography to control the compilation and to determine the ratio scale. Points were located on the bridging photography to determine the ratio scale of the photographs that pertain to the 1:10,000 scale TP sheets. Data for ruling projection were furnished to the Calcomp to be plotted in the Maryland State plane coordinate system. 1:5,000 scale ratios were ordered for the 1:5,000 scale sheets and 1:10,000 scale ratios of the bridging photographs were ordered for the 1:10,000 scale sheets.

23. Adequacy of Control

COMPILATION REPORT

TP-00839

31. DELINEATION:

Delineation was by the Wild B-8 stereoplotter, using 1:15,000 scale color photography. The photography was of good quality and more than adequate.

32. CONTROL:

See the attached Photogrammetric Plot Report dated April 1975.

33. SUPPLEMENTAL DATA:

None.

34. CONTOURS AND DRAINAGE:

Contours are not applicable to the project. Drainage was delineated by the Wild B-8 stereoplotter and by office interpretation of the photographs.

35. SHORELINE AND ALONGSHORE DETAILS:

Alongshore details were delineated by the Wild B-8 stereoplotter and by office interpretation of the photographs.

The mean high water line was delineated from office interpretation of the photographs.

36. OFFSHORE DETAILS:

None.

37. LANDMARKS AND AIDS:

Preliminary Forms 76-40 for Landmarks and/or Nonfloating Aids were prepared by the Compilation Office and forwarded to the Field Editor and/or Hydrographer for verification, location or deletion in November 1975 and the final field edited forms were forwarded to the Rockville, Maryland, Office on July 2, 1976.

38. CONTROL FOR FUTURE SURVEYS:

None.

39. JUNCTIONS:

See the attached Form 76-36B, Item #5 of the Descriptive Report, concerning junctions.

40. HORIZONTAL AND VERTICAL ACCURACY:

No statement.

46. COMPARISON WITH EXISTING MAPS:

A comparison has been made with the following USGS Quadrangle: BALTIMORE EAST, MD., scale 1:24,000, dated 1953 and photorevised in 1966.

47. COMPARISON WITH NAUTICAL CHARTS:

A comparison has been made with the following National Ocean Survey chart: No. 12281, scale 1:15,000, 29th Edition, dated August 17, 1974.

ITEMS TO BE APPLIED TO NAUTICAL CHARTS IMMEDIATELY

None.

ITEMS TO BE CARRIED FORWARD

None.

FIELD EDIT REPORT

TP-00839

Baltimore Harbor, Md.

51. METHODS

An inspection of all shoreline and alongshore features was made, and all deletions, additions, and corrections are either shown or referred to on the field edit paper ozalid. All field edit notes are in purple ink for additions, and in green ink for deletions.

Searches by boat for reported features below mean high water were made. Due to the limited visibility into the water and lack of wire drag equipment, any negative findings noted in the field edit data should be compared with the latest hydrographic survey of the area. Negative findings are considered conclusive only if so stated on the field edit ozalid.

Most of the field edit inspection was accomplished by boat. Features were located by either sextant fixes or photo identification.

52. ADEQUACY OF COMPILATION

Compilation of the sheet was adequate. Areas compiled with rocks are changed as there are no rocks on this sheet. These areas were shallow areas; the rocks compiled were trash, such things as tree limbs, logs, tires, etc. The shallow areas are approximately correct, the draft of our boat prevented a thorough investigation, however hydrography should clarify the areas indicated as shallow. Questions concerning wrecks were answered negatively, however the visibility into the water was poor. In Bullneck Creek, several boathouses are indicated on the field edit sheet to be deleted as these are merely pier floors, not buildings. Compilation will be complete with the application of field edit notes.

56. GEOGRAPHIC NAMES

No discrepancies were found while editing this sheet.

U.S. DEPARTMENT OF COMMERCE
National Oceanic and Atmospheric Administration
NATIONAL OCEAN SURVEY

57. LANDMARKS AND AIDS TO NAVIGATION

There are five landmarks to be charted, one of which was not previously charted. There are four landmarks to be deleted, all of which have been destroyed.

There are no non-floating aids to navigation on this sheet to be charted.

See forms 76-40.

58. FIELD EDITOR

Field edit was performed by Lt. George W. Jamerson and Mr. Howard V. Hart, in October, 1975.

Respectfully submitted,

George W. Jamerson

REVIEW REPORT
TP-00839

SHORELINE

March 7, 1977

61. GENERAL STATEMENT:

See Summary, which is Page 6 of this Descriptive Report.

No comparison print was prepared for this map.

62. COMPARISON WITH REGISTERED TOPOGRAPHIC SURVEYS:

North of Lat. $39^{\circ} 15' 30''$, a visual comparison was made with a 1:20,000 scale reduction of 1:10,000 scale Survey T-5420, which was mapped from November 1933 photography. South of Lat. $39^{\circ} 15' 30''$, a comparison was made with Survey T-5421, 1:10,000 scale, mapped from November 1933 photography. There has been industrial development along Colgate Creek, which has brought about shoreline changes and the removal of many small private piers. Shoreline changes in Bullneck Creek appear to have been caused by erosion. Several small piers have been added.

In the area compared, TP-00839 supersedes T-5420 and T-5421 for nautical chart construction purposes. T-5420 and T-5421 are the latest registered prior surveys of the area.

63. COMPARISON WITH MAPS OF OTHER AGENCIES:

A visual comparison was made with USGS Quadrangle BALTIMORE EAST, MD., 1:24,000 scale, dated 1953, photorevised in 1966. No significant differences were noted.

64. COMPARISON WITH CONTEMPORARY HYDROGRAPHIC SURVEYS:

A comparison was made with the Sounding Overlay for Survey H-9564 (AHP 5-7-75) and the Boat Sheet for Survey H-9643 (HSB 5-1-76). No significant differences were noted.

65. COMPARISON WITH NAUTICAL CHARTS:

A comparison was made with Chart 12281, 1:15,000 scale,

Four charted wrecks in Colgate Creek are not visible on the photographs, are not on H-9564, and were not observed by the Field Editor. Apparently the southerly two were brought forward from Survey T-5421. The origin of the northerly two is not known to this reviewer.

Two charted small piers at approximate Lat. $39^{\circ} 15.2'$, Long. $76^{\circ} 30.5'$ are not visible on the photographs, were not observed by the Field Editor, and are not on H-9643.

An object charted at approximate Lat. $39^{\circ} 15'$, Long. $76^{\circ} 30.2'$ is not visible on the photographs, is not on H-9643, and was not observed by the Field Editor. It was apparently brought forward from Survey T-5421, which shows a pier at this position.

66. ADEQUACY OF RESULTS AND FUTURE SURVEYS:

This map complies with Job Instructions and meets the requirements for Bureau Standards and the National Standards of Map Accuracy.
